Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [c]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]The value of shipments and cost of materials for industry groups (2- and 3-digit) includes extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

ELECTRICAL MEASUREMENT AND DISTRIBUTION EQUIPMENT

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3611--Electric Measuring Instruments and Test Equipment
3612--Power, Distribution, and Specialty Transformers
3613--Switchgear and Switchboard Apparatus
3621--Motors and Generators
3622--Industrial Controls
3623--Welding Apparatus
3624--Carbon and Graphite Products
3629--Electrical Industrial Apparatus, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3611--ELECTRIC MEASURING INSTRUMENTS AND TEST EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing pocket, portable, panelboard, and graphic recording instruments for measuring electricity, such as voltmeters, ammeters, wattmeters, watt-hour meters, demand meters, and other meters and indicating instruments. This industry also includes establishments primarily engaged in manufacturing analyzers for testing the electrical characteristics of internal combustion engines, radio apparatus, etc. For a detailed list of products of industry 3611, refer to table 6A, product codes 3611110 to 3611385.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Electric Measuring Instruments Industry in 1967 totaled $1,184 million. This included shipments of Electric Measuring Instruments (primary products), valued at $920 million, shipments of other products (secondary products) valued at $180 million, and miscellaneous receipts (mainly resales) of $84 million.

This industry's shipments of electric measuring instruments (primary products) in 1967 represented 84 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was also 84 percent. Secondary products shipped by this industry in 1967 included electric components, n.e.c. ($33 million), engineering and scientific instruments ($19 million), and mechanical measuring devices ($17 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 54 percent of the total industry shipments are represented by plants specializing in product class 36112, test equipment for testing electrical, radio and communication circuits, and motors.

Industry 3611 shipments of electric measuring instruments (primary products) in 1967 represented 79 percent (coverage ratio) of these products valued at $1,165 million shipped by all industries. In 1963, the coverage ratio was 78 percent. Other industries shipping electric measuring instruments (primary products) included industry 3662, Radio and TV Communication Equipment, $79 million; and industry 3821, Mechanical Measuring Devices, $38 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3611, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

3612--POWER, DISTRIBUTION, AND SPECIALTY TRANSFORMERS

This industry comprises establishments primarily engaged in manufacturing power, distribution and specialty transformers. Establishments primarily engaged in manufacturing radio frequency or voice frequency transformers, coils, or chokes are classified in industry 3679, and resistance welder transformers in industry 3623. For a detailed list of products of industry 3612, refer to table 6A, product codes 3612113 to 3612377.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Transformers Industry in 1967 totaled $1,188 million. This included shipments of transformers (primary products), valued at $1,113 million, shipments of other products (secondary products) valued at $60 million, and miscellaneous receipts of $15 million.

This industry's shipments of transformers (primary products) in 1967 represented 95 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 92 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 78 percent of the total industry shipments are represented by plants specializing in product class 36122, power and distribution transformers, except parts.

Industry 3612 shipments of transformers (primary products) in 1967 represented 98 percent (coverage ratio) of these products valued at $1,134 million shipped by all industries. In 1963, the coverage ratio was 94 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3612, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

3613--SWITCHGEAR AND SWITCHBOARD APPARATUS

This industry comprises establishments primarily engaged in manufacturing switchgear and switchboard apparatus. Important products of this industry include power switches, circuit breakers, power switching equipment, and similar switchgear for general industrial application; switchboards and cubicles, control and metering panels, power fuse mountings, and similar switchboard apparatus and supplies. Establishments primarily engaged in manufacturing industrial controls, are classified in industry 3622, and those manufacturing current-carrying wiring devices in industry 3643. For a detailed list of products of industry 3613, refer to table 6A, product codes 3613111 to 3613703.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Switchgear and Switchboard Apparatus Industry in 1967 totaled $1,690 million. This included shipments of switchgear and switchboard apparatus (primary products), valued at $1,435 million, shipments of other products (secondary products) valued at $178 million, and miscellaneous receipts (mainly resales) of $77 million.

This industry's shipments of switchgear and switchboard apparatus (primary products) in 1967 represented 89 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 87 percent. Secondary products shipped by this industry in 1967 included industrial controls ($75 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 36 percent of the total industry shipments are represented by plants specializing in product class 36131, switchgear except ducts and relays and 24 percent in 36133, low voltage panelboards and distribution boards and other switching and interrupting devices, 750 volts and under.

Industry 3613 shipments of switchgear and switchboard apparatus (primary products) in 1967 represented 90 percent (coverage ratio) of these products valued at $1,598 million shipped by all industries. In 1963, the coverage ratio was 89 percent. Other industries shipping switchgear and switchboard apparatus (primary products) included industry 3622, Industrial Controls, $58 million; industry 3643, Current-Carrying Wiring Devices, $27 million; and industry 3644, Noncurrent-Carrying Wire Devices, $20 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3613, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

3621--MOTORS AND GENERATORS

This industry comprises establishments primarily engaged in manufacturing electric motors (except starting motors) and power generators; motor generator sets; railway motors and control equipment; and motors, generators, and control equipment for gasoline, electric, and oil electric busses and trucks. Establishments primarily engaged in manufacturing turbo-generators are classified in industry 3511, and starting motors and battery charging generators for internal combustion engines in industry 3694. For a detailed list of products of industry 3621, refer to table 6A, product codes 3621101 to 3621611.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Motors and Generators Industry in 1967 totaled $2,402 million. This included shipments of motors and generators (primary products), valued at $1,927 million, shipments of other products (secondary products) valued at $383 million, and miscellaneous receipts of $92 million.

This industry's shipments of motors and generators (primary products) in 1967 represented 83 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 81 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 40 percent of the total industry shipments are represented by plants specializing in product class 36211, fractional horsepower motors; and 35 percent in 36212. integral horsepower motors and generators, except for land transportation equipment.

Industry 3621 shipments of motors and generators (primary products) in 1967 represented 83 percent (coverage ratio) of these products valued at $2,319 million shipped by all industries. In 1963, the coverage ratio was 84 percent. Other industries shipping motors and generators (primary products) consisted mainly of industry 3519, Internal Combustion Engines, N.E.C., $50 million; and industry 3694, Engine Electrical Equipment, $38 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3621, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

3622--INDUSTRIAL CONTROLS

This industry comprises establishments primarily engaged in manufacturing motor starters and controllers, control accessories, electronic controls, and other industrial controls. Establishments primarily engaged in manufacturing automatic temperature controls are classified in industry 3822. For a detailed list of products of industry 3622, refer to table 6A, product codes 3622012 to 3622099.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Industrial Controls Industry in 1967 totaled $1,103 million. This included shipments of industrial controls (primary products), valued at $873 million, shipments of other products (secondary products) valued at $183 million, and miscellaneous receipts of $47 million.

This industry's shipments of industrial controls (primary products) in 1967 represented 83 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 79 percent. Secondary products shipped by this industry in 1967 included switchgear and switchboard apparatus ($58 million).

Industry 3622 shipments of industrial controls (primary products) in 1967 represented 81 percent (coverage ratio) of these products valued at $1,071 million shipped by all industries. In 1963, the coverage ratio was 79 percent. Other industries shipping industrial controls (primary products) consisted mainly of industry 3613, Switchgear and Switchboard Apparatus, $75 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3621, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

3623--WELDING APPARATUS

This industry comprises establishments primarily engaged in manufacturing welding apparatus and accessories. Establishments primarily engaged in coating welding wire from purchased wire or from wire drawn in the same establishment are also included. Establishments primarily engaged in manufacturing gas welding apparatus are classified in industry 3548, and laser, electron beam, and ultrasonic welding machines and equipment in industry 3662. For a detailed list of products of industry 3623, refer to table 6A, product codes 3623111 to 3623381.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Welding Apparatus Industry in 1967 totaled $493 million. This included shipments of welding apparatus (primary products), valued at $407 million, shipments of other products (secondary products) valued at $40 million, and miscellaneous receipts (mainly resales) of $46 million.

This industry's shipments of welding apparatus (primary products) in 1967 represented 91 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 93 percent.

Industry 3623 shipments of welding apparatus (primary products) in 1967 represented 94 percent (coverage ratio) of these products valued at $433 million shipped by all industries. In 1963, the coverage ratio was 89 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3623, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

3624--CARBON AND GRAPHITE PRODUCTS

This industry comprises establishments primarily engaged in manufacturing lighting carbons; carbon, graphite, and metal-graphite brushes and brush stock; carbon or graphite electrodes for thermal and electrolytic uses; and other carbon, graphite, and metal-graphite products. For a detailed list of products of industry 3624, refer to table 6A, product codes 3624011 to 3624089.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Carbon and Graphite Products Industry in 1967 totaled $296 million. This included shipments of carbon and graphite products (primary products), valued at $282 million, shipments of other products (secondary products) valued at $13 million, and miscellaneous receipts of $1 million.

This industry's shipments of carbon and graphite products (primary products) in 1967 represented 96 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 93 percent.

Industry 3624 shipments of carbon and graphite products (primary products) in 1967 represented 96 percent (coverage ratio) of these products valued at $296 million shipped by all industries. In 1963, the coverage ratio was also 96 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3624, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

3629--ELECTRICAL INDUSTRIAL APPARATUS, N.E.C.

This industry comprises establishments primarily engaged in manufacturing industrial and commercial electric apparatus and equipment, not elsewhere classified, such as blasting machines, and fixed and variable capacitors, condensers, and rectifiers for industrial applications. Establishments primarily engaged in manufacturing fixed and variable capacitors and condensers for electronic end products are classified in industry 3679, and rectifiers for electronic end products in industries 3674 and 3679. For a detailed list of products of industry 3629, refer to table 6A, product codes 3629111 to 3629398.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Electrical Industrial Apparatus, N.E.C., Industry in 1967 totaled $329 million. This included shipments of electric industrial apparatus, n.e.c. (primary products), valued at $268 million, shipments of other products (secondary products) valued at $50 million, and miscellaneous receipts (mainly resales) of $12 million.

This industry's shipments of electrical industrial apparatus (primary products) in 1967 represented 84 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 80 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8.

Industry 3629 shipments of electrical industrial apparatus, n.e.c. (primary products) in 1967 represented 67 percent (coverage ratio) of these products valued at $399 million shipped by all industries. In 1963, the coverage ratio was 72 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3629, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

Note: In 1967, 1963, and 1958, the number of companies in industry 3611 was 502, 536, and 476, respectively; in industry 3612: 150, 144, and 157; industry 3613: 398, 338, and 339; industry 3621: 320, 316, and 317; industry 3622: 456, 421, and 205; industry 3623: 133, 133, and 123; industry 3624: 49, 40, and 34; industry 3629: 212, 226, and 273.

Standard notes: (NA) Not available. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.

*These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

[3]Some of the small establishments in this industry may have been misclassified as to industry. This does not significantly affect the statistics other than the number of establishments or number of companies. (See paragraph in Introduction: "Industry Classification of Establishments" for further explanation.)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [6]For 1967, over 30 percent of the data for this line was estimated. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over.

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [e] Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees.)

[1] Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

[2] Includes an unspecified amount for plants under construction but not in operation.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

[1]The higher coverage ratio in 1967 compared with the 1963 figure primarily results from changes in the standard industrial classification system which reclassified wood chips from industry 2429, Special Product Sawmills, N.E.C., to industry 2421, Sawmills and Planing Mills, General.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963, "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: -Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. e From 10 to 30 percent of this figure was estimated. (Z) Under 50 thousand.

[1] Detailed figures may not add to totals due to independent rounding.

[2] Included with 36111 51 to avoid disclosing figures for individual companies.

[3] Code 36112 92 which is less than $100 thousand is included with 36112 98 to avoid disclosing figures for individual companies.

[4] Product codes 36121 42 and 36121 53 are combined with product code 36121 98 in order to avoid disclosing figures of individual companies.

[5] In 1963, code 36123 00 "Transformer parts and supplies, power regulators, boosters and reactors, n.s.k." is included with product codes 36123 13, 36123 53 and 36123 31.

[6] In 1963 product code 36131 00 (Switchgear, except ducts and relays) was combined with product codes 36136 00 (Duct, including plug-in units and accessories, 750 volts and under) and 3613700 (Relays, control circuit).

[7] In 1963 product code 36132 00 (Power circuit breakers, all voltages) was combined with product code 36135 00 (Molded case circuit breakers, 750 volts and under).

[8] Quantity reported totaled 153.7 million for 1967 and 140.9 million for 1963.

[9] Quantity reported totaled 65.7 million for 1967 and 46.3 million for 1963.

[10] Excludes parts and supplies, except as indicated.

[11] Product code 3621118 is combined with code 3621120 and 3621121 to avoid disclosing figures of individual companies.

[12] Product code 3621139 is combined with code 3621135 to avoid disclosing figures of individual companies.

[13] In 1963 codes 3621181 and 3621185 are combined with codes 3621203 and 3621207 respectively.

[14] Figures for d.c. output of diesel-engine driven generator sets are combined with "other generating set units" (code 3621475) to avoid disclosing figures for individual companies.

[15] Represents thousands of units.

[16] Quantity reported for 1967 and 1963 are as follows: 183 million and 89 million.

[17] Data for product code 3629231 in 1963 are included with 3629251 to prevent disclosing figures for individual companies.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.

(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.

[2]In 1966 and previous years, product class code 36136 "Duct, including plug-in units and accessories, 750 volts and under" and 36137, "Relays, control circuit" were included with product class code 36131, "Switchgear, except ducts and relays."

[3]In 1966 and previous years, product class code 36132 (Power circuit breakers, all voltages) was included with product class code 36135 (Molded case circuit breakers, 750 volts and under).

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

HOUSEHOLD APPLIANCES

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3631--Household Cooking Equipment
3632--Household Refrigerators and Home and Farm Freezers
3633--Household Laundry Equipment
3634--Electric Housewares and Fans
3635--Household Vacuum Cleaners
3636--Sewing Machines
3639--Household Appliances, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3631--HOUSEHOLD COOKING EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing household cooking equipment, such as stoves, ranges, and ovens. Establishments primarily engaged in manufacturing household cooking appliances, such as hot plates, grills, percolators, and toasters are classified in industry 3634. Establishments primarily engaged in manufacturing commercial cooking equipment are classified in industry 3589. For a detailed list of products of industry 3631, refer to table 6A, product codes 3631111 to 3631298.

This code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Household Cooking Equipment Industry in 1967 totaled $552 million. This included shipments of household cooking equipment (primary products), valued at $482 million, shipments of other products (secondary products) valued at $39 million, and miscellaneous receipts (mainly products bought and resold without further manufacture) of $30 million.

This industry's shipments of household cooking equipment (primary products) in 1967 represented 92 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 87 percent. Secondary products shipped by this industry in 1967 included household appliances, n.e.c. ($8 million).

Industry 3631 shipments of household cooking equipment (primary products) in 1967 represented 76 percent (coverage ratio) of these products valued at $632 million shipped by all industries. In 1963, the coverage ratio was 72 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3631, these establishments accounted for less than 1 percent of payroll and value added by manufacture.

3632--HOUSEHOLD REFRIGERATORS AND HOME AND FARM FREEZERS

This industry comprises establishments primarily engaged in manufacturing household refrigerators and home and farm freezers. Establishments primarily engaged in manufacturing commercial and industrial refrigeration equipment, packaged room coolers, and dehumidifiers are classified in industry 3585. For a detailed list of products of industry 3632, refer to table 6A, product codes 3632107 to 3632247.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Household Refrigerators and Freezers Industry in 1967 totaled $1,785 million. This included shipments of household refrigerators and freezers (primary products), valued at $984 million, shipments of other products (secondary products) valued at $698 million, and miscellaneous receipts (mainly products bought and resold without further manufacture) of $103 million.

This industry's shipments of household refrigerators and freezers (primary products) in 1967 represented 59 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 66 percent. Secondary products shipped by this industry in 1967 consisted mainly of refrigeration machinery ($461 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 90 percent of the total industry shipments are represented by plants specializing in product class 36321, household refrigerators.

Industry 3632 shipments of household refrigerators and freezers (primary products) in 1967 represented 99 percent (coverage ratio) of these products valued at $988 million shipped by all industries. In 1963, the coverage ratio was also 99 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3632, these establishments accounted for less than 1 percent of payroll and value added by manufacture.

3633--HOUSEHOLD LAUNDRY EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing commercial laundry equipment such as washing machines, wringers, driers, and ironers for household use. Establishments primarily engaged in manufacturing commercial laundry equipment are classified in industry 3582. For a detailed list of products of industry 3633, refer to table 6A, product codes 3633131 to 3633298.

The code number for this industry in the Standard Industrial Classification Manual is unchanged, but the content of the industry has been slightly changed from the classification system used in 1963. The change in composition of the industry as now constituted, compared with that under the classification system followed in the 1963 census, is due principally to the exclusion of coin-operated household washing machines from industry 3633 for 1967. In 1967, such machines are included in industry 3582, Commercial Laundry Equipment.

Value of shipments and other receipts of the Household Laundry Equipment Industry in 1967 totaled $983 million. This included shipments of household laundry equipment (primary products), valued at $839 million, shipments of other products (secondary products) valued at $121 million, and miscellaneous receipts (mainly products bought and resold without further manufacture) of $22 million.

This industry's shipments of household laundry equipment (primary products) in 1967 represented 87 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 89 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 96 percent of the total industry shipments are represented by plants specializing in product class 36331, Household mechanical washing machines, dryers, and washer-dryer combinations.

Industry 3633 shipments of household laundry equipment (primary products) in 1967 represented 90 percent (coverage ratio) of these products valued at $932 million shipped by all industries. In 1963, the coverage ratio was 87 percent. Other industries shipping household laundry equipment (primary products) consisted mainly of industry 3632, household refrigerators and freezers, $79 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3633, these establishments accounted for less than 1 percent of payroll and value added by manufacture.

3634--ELECTRIC HOUSEWARES AND FANS

This industry comprises establishments primarily engaged in manufacturing electric housewares for heating, cooking, and other purposes; and electric fans, including ventilating and exhaust household-type fans. Important products of this industry include electric air heaters, bed coverings, blenders, broilers, deep-fat fryers, flatirons, food mixers, hotplates, percolators and coffeemakers, roasters, toasters, desk and bracket fans, hassock or floor fans, window-type propeller fans, roll-abouts and household and kitchen ventilating and exhaust fans. Establishments primarily engaged in manufacturing industrial and commercial blowers, industrial and commercial exhaust and ventilating fans, and attic fans are classified in industry 3564. For a detailed list of products of industry 3634, refer to table 6A, product codes 3634137 to 3634431.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Electric Housewares and Fans Industry in 1967 totaled $1,112 million. This included shipments of electric housewares and fans (primary products), valued at $918 million, shipments of other products (secondary

products) valued at $100 million, and miscellaneous receipts (mainly products bought and resold without further manufacture) of $94 million.

This industry's shipments of electric housewares and fans (primary products) in 1967 represented 90 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 87 percent.

Industry 3634 shipments of electric housewares and fans (primary products) in 1967 represented 86 percent (coverage ratio) of these products valued at $1,073 million shipped by all industries. In 1963, the coverage ratio was 81 percent. Other industries shipping electric housewares and fans (primary products) included industry 3461, Metal Stampings, $38 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3634, these establishments accounted for less than 1 percent of payroll and value added by manufacture.

3635--HOUSEHOLD VACUUM CLEANERS

This industry comprises establishments primarily engaged in manufacturing vacuum cleaners for household use. Establishments primarily engaged in manufacturing vacuum cleaners for industrial use are classified in industry 3589, and installation of built in vacuum cleaner systems in industry 1796. For a detailed list of products of industry 3635, refer to table 6A, product codes 3635011 to 3635071.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Household Vacuum Cleaners Industry in 1967 totaled $293 million. This included shipments of household vacuum cleaners (primary products), valued at $213 million, shipments of other products (secondary products) valued at $71 million, and miscellaneous receipts of $9 million.

This industry's shipments of household vacuum cleaners (primary products) in 1967 represented 75 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 87 percent. Secondary products shipped by this industry in 1967 included household appliances, n.e.c., $22 million.

Industry 3635 shipments of household vacuum cleaners (primary products) in 1967 represented 84 percent (coverage ratio) of these products valued at $255 million shipped by all industries. In 1963, the coverage ratio was 80 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3635, these establishments accounted for less than 1 percent of payroll and value added by manufacture.

3636--SEWING MACHINES

This industry comprises establishments primarily engaged in manufacturing sewing machines for domestic and industrial use. For a detailed list of products of industry 3636, refer to table 6A, product codes 3636021 to 3636081.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Sewing Machines Industry in 1967 totaled $124 million. This included shipments of sewing machines (primary products), valued at $113 million.

This industry's shipments of sewing machines (primary products) in 1967 represented 95 to 99 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 90 to 95 percent.

Industry 3636 shipments of sewing machines (primary products) in 1967 represented 96 percent (coverage ratio) of these products valued at $117 million shipped by all industries. In 1963, the coverage ratio was also 96 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3635, these establishments accounted for approximately less than 1 percent of payroll and value added by manufacture.

3639--HOUSEHOLD APPLIANCES, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing household appliances, not elsewhere classified, such as hot water heaters, dishwashers, and food waste disposal units. For a detailed list of products of industry 3639, refer to table 6A, product codes 3639111 to 3639391.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Household Appliances, N.E.C., Industry in 1967 totaled $480 million. This included shipments of household appliances, n.e.c. (primary products), valued at $404 million, shipments of other products (secondary products) valued at $61 million, and miscellaneous receipts (mainly products bought and resold without further manufacture) of $15 million.

This industry's shipments of household appliances, n.e.c. (primary products) in 1967 represented 87 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 79 percent. Secondary products shipped by this industry in 1967 included heating equipment except electric ($11 million).

Industry 3639 shipments of household appliances, n.e.c. (primary products) in 1967 represented 79 percent (coverage ratio) of these products valued at $510 million shipped by all industries. In 1963, the coverage ratio was 79 percent. Other industries shipping household appliances, n.e.c. (primary products) consisted mainly of industry 3632, Household Refrigerators and Freezers, $43 million; and industry 3635, Household Vacuum Cleaners, $22 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3639, these establishments accounted for less than 1 percent of payroll and value added by manufacture.

Note: In 1967, 1963, and 1958, the number of companies in industry 3631 was 66, 77, and 64, respectively; in industry 3632: 31, 31, and 25; industry 3633: 25, 31, and 33; industry 3634: 248, 286, and 289; industry 3635: 34, 34, and 27; industry 3636: 83, 83, and 83; industry 3639: 71, 102, and 106. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: (NA) Not available. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. * These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [c]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than $50 thousand. [r] Revised.

[1] Totals may be different from the sum of the detail due to independent rounding.

[2] In 1963 23.5 cubic feet and over upright-type are included in 21.5 to 23.4 cubic feet upright-type freezers.

[3] In 1963 23.5 cubic feet and over chest-type are included in 21.5 to 23.4 cubic feet chest-type freezers.

[4] For 1963, data on electric knives were included with product codes 3634378, Other household food preparation appliances, and 3634398, Other electric appliances.

[5] Portable air purifiers are included with "other electric appliances" (3634398) in order to avoid disclosing figures of individual companies.

[6] Includes the value of shipments of household sewing machines.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1] These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at the individual product level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

[2] Excludes parts and accessories for electric water heaters.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization--the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization--the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

TABLE 9. Establishments and Production Workers for Selected Metalworking Operations: 1967

ELECTRIC LIGHTING AND WIRING EQUIPMENT

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3641--Electric Lamps
3642--Lighting Fixtures
3643--Current-Carrying Wiring Devices
3644--Noncurrent-Carrying Wiring Devices

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3641--ELECTRIC LAMPS

This industry comprises establishments primarily engaged in manufacturing electric bulbs, tubes, and related light sources. Important products of this industry include incandescent filament lamps, vapor and fluorescent lamps, photoflash and photoflood lamps, electrotherapeutic lamp units for ultra-violet and infrared radiation, and other electric light sources. Establishments primarily engaged in manufacturing glass blanks for bulbs are classified in industry 3229; and lamp components, such as supports, filaments, lead-in wire and cold cathode fluorescent lamp electrodes, in industry 3699. For a detailed list of products of industry 3641, refer to table 6A, product codes 3641008 to 3641063.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Electric Lamps Industry in 1967 totaled $782 million. This included shipments of electric lamps (primary products), valued at $720 million, shipments of other products (secondary products) valued at $43 million, and miscellaneous receipts of $19 million.

This industry's shipments of electric lamps (primary products) in 1967 represented 94 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 95 percent.

Industry 3641 shipments of electric lamps (primary products) in 1967 represented 95 percent (coverage ratio) of these products valued at $756 million shipped by all industries. In 1963, the coverage ratio was 96 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3641, these establishments accounted for 0.2 percent of payroll and 0.2 percent of value added by manufacture.

3642--LIGHTING FIXTURES

This industry comprises establishments primarily engaged in manufacturing lighting fixtures and equipment of any type, including electric and gas lighting fixtures; carbide, kerosene, and gasoline lamps; and metal reflectors and fittings. Establishments primarily engaged in producing glassware for lighting fixtures are classified in Major Group 32; and electric light bulbs, tubes, and related light sources in industry 3641. For a detailed list of products of industry 3642, refer to table 6A, product codes 3642111 to 3642761.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Lighting Fixtures Industry in 1967 totaled $1,594 million. This included shipments of lighting fixtures (primary products), valued at $1,420 million, shipments of other products (secondary products) valued at $107 million, and miscellaneous receipts (mainly resales) of $66 million.

This industry's shipments of lighting fixtures (primary products) in 1967 represented 93 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was also 93 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 28 percent of the total industry shipments are represented by plants specializing in product class 36422 commercial and institutional type electric fixtures; 18 percent in 36424 vehicular lighting equipment, electric; and 16 percent in 36421 residential type electric fixtures, except portable.

Industry 3642 shipments of lighting fixtures (primary products) in 1967 represented 94 percent (coverage ratio) of these products valued at $1,512 million shipped by all industries. In 1963, the coverage ratio was 93 percent. Other industries shipping lighting fixtures (primary products) included industry 3644, Noncurrent-Carrying Wiring Devices, $31 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3642, these establishments accounted for 1.5 percent of payroll and 1.9 percent of value added by manufacture.

3643--CURRENT-CARRYING WIRING DEVICES

This industry comprises establishments primarily engaged in manufacturing current carrying wiring devices. Important products of this industry include attachment plugs and caps, convenience outlets, lamp sockets and receptacles, snap switches, conductor connectors, overhead trolley line material, rail bonds for both propulsion and signal circuits, lightning arrestors, and other lightning protective equipment. For a detailed list of products of industry 3643, refer to table 6A, product codes 3643001 to 3643098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Current-Carrying Wiring Devices Industry in 1967 totaled $837 million. This included shipments of current-carrying wiring devices (primary products), valued at $620 million, shipments of other products (secondary products) valued at $172 million, and miscellaneous receipts (mainly resales) of $46 million.

This industry's shipments of current-carrying wiring devices (primary products) in 1967 represented 78 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 80 percent. Secondary products shipped by this industry in 1967 included switchgear and switchboard apparatus ($28 million) and noncurrent-carrying wiring devices ($25 million.)

Industry 3643 shipments of current-carrying wiring devices (primary products) in 1967 represented 78 percent (coverage ratio) of these products valued at $790 million shipped by all industries. In 1963, the coverage ratio was 83 percent. Other industries shipping current-carrying wiring devices (primary products) included industry 3644, Noncurrent-Carrying Wiring Devices, $52 million; and industry 3679, Electronic Components, N.E.C., $18 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3643, these establishments accounted for 0.7 percent of payroll and 1.0 percent of value added by manufacture.

3644--NONCURRENT-CARRYING WIRING DEVICES

This industry comprises establishments primarily engaged in manufacturing noncurrent-carrying wiring devices. Important products of this industry include conduits and fittings; electrical insulators and insulation materials, except porcelain insulators (industry 3264) and glass insulators (industry 3229); outlet, switch and fuse boxes; and pole line hardware. For a detailed list of products of industry 3644, refer to table 6A, product codes 3644112 to 3644338.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Noncurrent-Carrying Wiring Devices Industry in 1967 totaled $638 million. This included shipments of noncurrent-carrying wiring devices (primary products), valued at $447 million, shipments of other products (secondary products) valued at $157 million, and miscellaneous receipts (mainly resales) of $34 million.

This industry's shipments of noncurrent-carrying wiring devices (primary products) in 1967 represented 74 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 77 percent. Secondary products shipped by this industry in 1967 consisted mainly of current-carrying wiring devices ($52 million), and lighting fixtures ($31 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8.

Industry 3644 shipments of noncurrent-carrying wiring devices (primary products) in 1967 represented 82 percent (coverage ratio) of these products valued at $549 million shipped by all industries. In 1963, the coverage ratio was 80 percent. Other industries shipping noncurrent-carrying wiring devices (primary products) included industry 3643, Current-Carrying Wiring Devices,$25 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3644, these establishments accounted for 0.3 percent of payroll and 0.3 percent of value added by manufacture.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under $50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250 to 499 employees
CC - 500 to 999 employees
EE - 1,000 to 2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Unit of measure	Total shipments including interplant transfers			
			1967		1963	
			Quantity	Value (million dollars)	Quantity	Value (million dollars)
3644- --	NONCURRENT CARRYING WIRING DEVICES--Continued					
36440 00	Noncurrent carrying wiring devices, n.s.k. (Represents establishments with 10 employees or more in 1967)	.....	(X)	10.9	(X)	(X)
36440 02	Noncurrent carrying wiring devices, n.s.k. (Represents establishments with fewer than 10 employees in 1967)	.....	(X)	1.9		

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]Product code 3641063, cold cathode fluorescent lamps, etc., are included with product code 3641010, electric lamps (bulbs only), as reported in the census of manufactures. Product code 3641063 was negligible in 1967 and was revised to $547 in 1963.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Values ranges (million dollars)	Symbol
Less than $2.0.....	AA	$10.0 to $20.0.....	EE
$2.0 to $5.0.....	BB	$20.0 to $50.0.....	FF

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data.

[2]This product class previously included electronic connectors but has been redefined in the 1963 Census of Manufactures to exclude this product. The value of shipments including electronic connectors are as follows: 1963, $828.2 million; 1958, $514.9 million; 1954, $285.2 million; and 1947, $170.3 million.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization–the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization–the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

COMMUNICATION EQUIPMENT, INCLUDING RADIO AND TV, AND ELECTRONIC COMPONENTS AND ACCESSORIES

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3651--Radio and Television Receiving Sets, Except Communication Types
3652--Phonograph Records
3661--Telephone and Telegraph Apparatus
3662--Radio and Television Transmitting, Signaling, and Detection Equipment and Apparatus
3671--Radio and Television Receiving Type Electron Tubes, Except Cathode Ray
3672--Cathode Ray Picture Tubes
3673--Transmitting, Industrial, and Special Purpose Electron Tubes
3674--Semiconductors and Related Services
3679--Electronic Components and Accessories, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Industries included in this report produce the bulk of electronic equipment, i.e., radios, television sets, electron tubes, etc., but also produce communications equipment other than electronic (industry 3661).

Component parts are generally included in the industry of the end product with the exception of certain general purpose components which are specifically classified elsewhere in the Standard Industrial Classification. Electronic components are frequently produced and consumed at the same location by establishments classified in this major group. Thus, there are (1) plants solely engaged in producing electronic components; (2) plants producing electronic components and assembling them into finished products; and (3) plants which assemble components produced elsewhere either in other plants of the same company or by other companies.

3651--RADIO AND TELEVISION RECEIVING SETS, EXCEPT COMMUNICATIONS TYPE

This industry comprises establishments primarily engaged in manufacturing electronic equipment for home entertainment. This industry also includes establishments primarily engaged in manufacturing public address systems and music distribution apparatus, except records. Establishments primarily engaged in manufacturing records are classified in industry 3652; radio and television receiving-type tubes in industry 3671; and television receiving-type cathode ray tubes in industry 3672. For a detailed list of products of industry 3651, refer to table 6A-1, product codes 3651101 to 3651590.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Radio and TV Receiving Sets Industry in 1967 totaled $3,846 million. This included shipments of radio and TV receiving sets (primary products), valued at $3,518 million, shipments of other products (secondary products) valued at $214 million, and miscellaneous receipts (mainly products bought and resold) of $115 million.

This industry's shipments of radio and TV receiving sets (primary products) in 1967 represented 94 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 91 percent. Secondary products shipped by this industry in 1967 included electronic components, not elsewhere classified ($61 million), and radio and TV communication equipment ($48 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 66 percent of the total industry shipments are represented by plants specializing in product class 36512, Household television receiving, including television combinations.

Industry 3651 shipments of radio and TV receiving sets (primary products) in 1967 represented 99 percent (coverage ratio) of these products valued at $3,568 million shipped by all industries. In 1963, the coverage ratio was 96 percent. Other industries shipping radio and TV receiving sets (primary products) included industry 3679, Electronic Components, N.E.C., $19 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other government agencies and the remaining statistics estimated from industry averages. For industry 3651, these establishments accounted for approximately 0.2 percent of payroll and value added by manufacture.

3652--PHONOGRAPH RECORDS

The Phonograph Records Industry includes establishments primarily engaged in manufacturing phonograph records and prerecorded magnetic tape. Establishments primarily engaged in manufacturing electronic equipment for home entertainment, except records and prerecorded magnetic tape, are classified in industry 3651. For a detailed list of products of industry 3652, refer to table 6A-1, product codes 3652022 to 3652091.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Phonograph Records Industry in 1967 totaled $276 million. This included shipments of phonograph records (primary products), valued at $268 million, shipments of other products (secondary products) valued at $1 million, and miscellaneous receipts (mainly products bought and resold) of $7 million.

This industry's shipments of phonograph records (primary products) in 1967 represented 99 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was also 99 percent.

Industry 3652 shipments of phonograph records (primary products) in 1967 represented 96 percent (coverage ratio) of these products valued at $271 million shipped by all industries. In 1963, the coverage ratio was 97 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3652, these establishments accounted for 3 percent of payroll and 4 percent of value added by manufacture.

3661--TELEPHONE AND TELEGRAPH APPARATUS

The Telephone and Telegraph Apparatus Industry includes establishments primarily engaged in manufacturing wire telephone and telegraph equipment and parts especially designed for telephone and telegraph use.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Data on cost of materials and value of shipments of the Telephone and Telegraph Apparatus Industry include extensive duplication resulting from the transfer of products such as telephone and telegraph components to establishments producing complete telephone and telegraph equipment. The value of such shipments are duplicated in the total value of shipments. A corresponding duplication enters into the total cost of materials. The data shown for value added by manufacture (value of shipments less cost of materials, etc.) avoid this duplication.

Value of shipments and other receipts of the Telephone and Telegraph Apparatus Industry in 1967 totaled $2,591 million. This included shipments of telephone and telegraph apparatus (primary products), valued at $2,165 million, shipments of other products (secondary products) valued at $298 million, and miscellaneous receipts of $128 million.

This industry's shipments of telephone and telegraph apparatus (primary products) in 1967 represented 88 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 95 percent. Secondary products shipped by this industry in 1967 included radio and TV communication equipment ($82 million), and electric components, n.e.c. ($48 million).

Industry 3661 shipments of telephone and telegraph apparatus (primary products) in 1967 represented 96 percent (coverage ratio) of these products valued at $2,248 million shipped by all industries. In 1963, the coverage ratio was 95 percent. Other industries shipping telephone and telegraph apparatus (primary products) included industry 3662, Radio and TV Communications Equipment, $37 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3661, these establishments accounted for approximately 0.1 percent of payroll and value added by manufacture.

3662--RADIO AND TELEVISION TRANSMITTING, SIGNALING, AND DETECTION EQUIPMENT AND APPARATUS

The Radio and Television Transmitting, Signaling, and Detection Equipment and Apparatus Industry includes establishments primarily engaged in manufacturing (1) radio and television broadcasting equipment; (2) electric communication equipment and parts, except telephone and telegraph; (3) electronic field detection apparatus, light and heat emission operating apparatus, object detection apparatus and navigational electronic equipment, and aircraft and missile control systems; and (4) high energy particle accelerator systems and equipment designed and sold as a complete package for radiation therapy, irradiation,

radiographic inspection, and research (linear accelerators, betatrons, dynamotrons, Vandergraff generators, resonant transformers, insulating core transformers, etc.); (5) high energy particle electronic equipment and accessories sold separately for the construction of linear accelerators, cyclotrons, synchrotrons, and other high energy research installations (transmitters/modulators, accelerating waveguide structures, pulsed electron guns, vacuum systems, cooling systems, etc.); (6) other electric and electronic communication and signaling products, not elsewhere classified. Establishments primarily engaged in manufacturing transmitting tubes are classified in industry 3673. For a detailed list of products of industry 3662, refer to table 6A-2, product codes 3662121 to 3662812.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Radio and TV Communication Equipment Industry in 1967 totaled $8,556 million. This included shipments of radio and TV communications equipment (primary products), valued at $6,706 million, shipments of other products (secondary products) valued at $834 million, and miscellaneous receipts of $1,015 million.

This industry's shipments of radio and TV communication equipment (primary products) in 1967 represented 89 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 88 percent. Secondary products shipped by this industry in 1967 included engineering and scientific instruments ($118 million), and electronic components, n.e.c. ($101 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 23 percent of the total industry shipments are represented by plants specializing in product class 36621, Commercial, industrial, and military electronic communication equipment, except telephone communication equipment; and 23 percent in 36625, Electronic search and detection apparatus including radar infrared and sonar.

Industry 3662 shipments of radio and TV communications equipment (primary products) in 1967 represented 90 percent (coverage ratio) of these products valued at $7,455 million shipped by all industries. In 1963, the coverage ratio was 91 percent. Other industries shipping radio and TV communications equipment (primary products) consisted mainly of industry 1925, Complete Guided Missiles, $111 million; and industry 3729, Aircraft Equipment, N.E.C., $96 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3662, these establishments accounted for approximately 0.1 percent of payroll and value added by manufacture.

3671--RADIO AND TELEVISION RECEIVING TYPE ELECTRON TUBES, EXCEPT CATHODE RAY

The Radio and Television Receiving Type Electron Tubes, Except Cathode Ray Industry includes establishments primarily engaged in manufacturing radio and television receiving type electron tubes, except cathode ray tubes. Establishments primarily engaged in manufacturing television receiving type cathode ray tubes are classified in industry 3672; transmitting tubes in industry 3673; X-ray tubes in industry 3693; and electronic equipment for home entertainment, except tubes, in industry 3651. For a detailed list of products of industry 3671, refer to table 6A-2, product codes 3671011 to 3671015.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Electron Tubes, Receiving Type, Industry in 1967 totaled $301 million. This included shipments of receiving type electron tubes (primary products), valued at $238 million, shipments of other products (secondary products) valued at $41 million, and miscellaneous receipts (mainly products bought and resold) of $22 million.

This industry's shipments of receiving type electron tubes (primary products) in 1967 represented 85 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 89 percent. Secondary products shipped by this industry in 1967 consisted mainly of transmitting, industrial, and special purpose electron tubes (except X-ray) $22 million.

Industry 3671 shipments of receiving type electron tubes (primary products) in 1967 represented 94 percent (coverage ratio) of these products valued at $253 million shipped by all industries. In 1963, the coverage ratio was 95 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3671, these establishments accounted for approximately 0.2 percent of payroll and 0.1 percent of value added by manufacture.

3672--CATHODE RAY PICTURE TUBES

The Cathode Ray Picture Tubes Industry includes establishments primarily engaged in manufacturing television receiving type cathode ray tubes. Establishments primarily engaged in manufacturing other radio and television receiving type electron tubes are classified in industry 3671; and transmitting tubes in industry 3673. For a detailed list of products of industry 3672, refer to table 6A-2, product codes 3672013 to 3672015.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Cathode Ray Picture Tubes Industry in 1967 totaled $832 million. This included shipments of cathode ray picture tubes (primary products), valued at $752 million, shipments of other products (secondary products) valued at $65 million, and miscellaneous receipts of $16 million.

This industry's shipments of cathode ray picture tubes (primary products) in 1967 represented 92 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was between 85 and 90 percent.

Industry 3672 shipments of Cathode ray picture tubes (primary products) in 1967 represented 98 percent (coverage ratio) of these products valued at $766 million shipped by all industries. In 1963, the coverage ratio was 90 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3672, these establishments accounted for approximately 0.1 percent of payroll and value added by manufacture.

3673--TRANSMITTING, INDUSTRIAL, AND SPECIAL PURPOSE ELECTRON TUBES

The Transmitting, Industrial, and Special Purpose Electron Tubes, Industry includes establishments primarily engaged in manufacturing transmitting, industrial, and special purpose electron tubes. Establishments primarily engaged in manufacturing radio and television transmitting equipment are classified in industry 3662; radio and television receiving tubes in industry 3671; television receiving type cathode ray tubes in industry 3672; and X-ray tubes in industry 3693. For a detailed list of products of industry 3673, refer to table 6A-2, product codes 3673011 to 3673096.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Electron Tubes, Transmitting, Industry in 1967 totaled $369 million. This included shipments of electron tubes, transmitting (primary products), valued at $261 million, shipments of other products (secondary products) valued at $67 million, and miscellaneous receipts (mainly products bought and resold) of $41 million.

This industry's shipments of electron tubes, transmitting (primary products) in 1967 represented 79 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 80 percent.

Industry 3673 shipments of electron tubes, transmitting (primary products) in 1967 represented 72 percent (coverage ratio) of these products valued at $362 million shipped by all industries. In 1963, the coverage ratio was 75 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3673, these establishments accounted for approximately 0.1 percent of payroll and value added by manufacture.

3674--SEMICONDUCTORS AND RELATED DEVICES

The Semiconductors and Related Devices Industry includes establishments primarily engaged in manufacturing semiconductor and related solid state devices, such as semiconductor diodes and stacks, including rectifiers, integrated microcircuits (semiconductors networks), transistors, solar cells, and light sensitive semiconductor (solid state) devices. For a detailed list of products of industry 3674, refer to table 6A-2, product codes 3674113 to 3674996.

The code number for this industry in the Standard Industrial Classification Manual is unchanged, but the content of the industry has been slightly changed from the classification system used in 1963. The composition of the industry as now constituted, compared with that under the classification system followed in the 1963 Census, is due principally to the addition of integrated microcircuits (semiconductor networks), which were formerly included in industry 3679, Electronic Components, N.E.C.

Value of shipments and other receipts of the Semiconductors Industry in 1967 totaled $1,141 million. This included shipments of semiconductors (primary products), valued at $1,015 million, shipments of other products (secondary products) valued at $88 million, and miscellaneous receipts of $39 million.

This industry's shipments of semiconductors (primary products) in 1967 represented 92 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 88 percent. Secondary products shipped by this industry in 1967 consisted mainly of Electronic Components, N.E.C. ($67 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 52 percent of the total industry shipments are represented by plants specializing in product class 36742, Transistors; and 24 percent in 36743, Diodes and rectifiers.

Industry 3674 shipments of semiconductors (primary products) in 1967 represented 87 percent (coverage ratio) of these products valued at $1,162 million shipped by all industries. In 1963, the coverage ratio was 92 percent. Other industries shipping semiconductors (primary products) consisted mainly of industry 3679, Electronic Components, N.E.C., $79 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3674, these establishments accounted for approximately 0.1 percent of payroll and value added by manufacture.

3679--ELECTRONIC COMPONENTS AND ACCESSORIES, NOT ELSEWHERE CLASSIFIED

The Electronic Components and Accessories, Not Elsewhere Classified, Industry includes establishments primarily engaged in manufacturing specialty resistors for electronic end products; electronic inductors, transformers, and capacitors; and other electronic components, not elsewhere classified. Establishments primarily engaged in manufacturing resistors, inductors, and transformers for telephone and telegraph apparatus are classified in industry 3661; electric lamps in industry 3641; and semiconductor (solid state) and related devices in industry 3674. For a detailed list of products of industry 3679, refer to table 6A-2, product codes 3679221 to 3679596.

The code number for this industry in the Standard Industrial Classification Manual is unchanged, but the content of the industry has been slightly changed from the classification system used in 1963. The composition of the industry as now constituted, compared with that under the classification system followed in the 1963 Census, is due principally to the loss of integrated microcircuits (semiconductor networks), which are currently included in industry 3674, Semiconductors.

Value of shipments and other receipts of the Electronic Components, N.E.C., Industry in 1967 totaled $4,809 million. This included shipments of electronic components, n.e.c. (primary products), valued at $3,777 million, shipments of other products (secondary products) valued at $752 million, and miscellaneous receipts (mainly products bought and resold) of $281 million.

This industry's shipments of electronic components, n.e.c. (primary products) in 1967 represented 83 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 89 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8.

Industry 3679 shipments of electronic components, n.e.c. (primary products) in 1967 represented 85 percent (coverage ratio) of these products valued at $4,420 million shipped by all industries. In 1963, the coverage ratio was 78 percent. Other industries shipping electronic components, n.e.c. (primary products) included industry 3662, Radio and TV Communications Equipment, $101 million; and industry 3674, Semiconductors, $67 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3679, these establishments accounted for approximately 0.5 percent of payroll and value added by manufacture.

Note: In 1967, 1963, and 1958, the number of companies in industry 3651 was 303, 322, and 216, respectively; in industry 3652: 306, 128, and 85; industry 3661: 82, 65, and 67; industry 3662: 1,111, 1,001, and 472; industry 3671: 28, 30, and 71; industry 3672: 95, 148, and 72; industry 3673: 43, 45, and 40; industry 3674: 141, 86, and (NA); industry 3679: 1,775, 1,743, and (NA). The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

[3]Some of the small establishments in this industry may have been misclassified as to industry. This does not significantly affect the statistics other than the number of establishments or number of companies. (See paragraph in Introduction: "Industry Classification of Establishments" for further explanation.)

[4]The value of shipments and cost of materials for this industry include extensive duplication arising from shipments between establishments in the same industry classifications. See footnote (2), table 6A.1 for an approximation of interplant transfers of products classified in this industry. For further explanation see text.

[5]The exact figures shown, while correct to the extent that they are mathematical calculations, are not very meaningful because of extensive duplication in the value of shipments. See introductory text for this industry.

[6]Industry 3674 was included with industry 3679 in the 1958 Census of Manufactures. Accordingly, no estimates are available for 1959-1962. The figures for 1958 are based on a special tabulation.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [6]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [e]Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

[1]The exact percentage shown, while correct to the extent that they are mathematical calculations, are not very meaningful because of duplication in the value of shipments. See introductory text for this industry.

[2]For 1963, secondary products are included with miscellaneous receipts.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]From 10 to 30 percent of this figure was estimated. [r]Revised.

[1]Figures for "other home-type radios" are included with those for "Home-type transistor radios."

[2]Includes interplant transfers between establishments of the same company valued between $250 and $300 million. The exact figure cannot be published without revealing the operations of individual companies.

[3]See table 6A-2 for detail product data from Annual Survey MA-36N.

[1]Figures on sonar communication systems and equipment, are included with other communication equipment, sold separately (3662198) in order to avoid disclosing figures of individual companies.

[2]Figures on "Broadcast recorders" are included with "other audio equipment" (3662216) in 1967 in order to avoid disclosing figures of individual companies.

[3]Figures on "Cameras (TV and TV camera chains)" and "Film equipment" are included with the combined figure for "video tape recorders" (3662227) and "other video equipment" (3662228) for 1967.

[4]Figures on "Facsimile communications equipment" (3662652) are included with "Telemetering systems and equipment, n.e.c., sold separately" (3662631).

[5]Figures on "Pulse amplifiers" (3662665) are included with "other amplifiers (differential, facsimile, etc.)" (3662669) for 1967.

TABLE 6A-2. Selected Electronic and Associated Products—Quantity and Value of Shipments: 1967 and 1963—Continued

Footnotes for table 6A-2--Continued

[6]In 1963 industry 3674 had only one product class.

[7]Figures for integrated and molecular circuitry were included in product class 36795, "Electronic products, n.e.c." in 1963 and in 36741, "Semiconductor curcuit networks" in 1967.

[8]Figures on "other transistors" and "other diodes" are included with "other semiconductor devices" 3674995 in 1963 in order to avoid disclosing figures of individual companies.

[9]Figures on "Modules" (3679523) are included with "Passive component packages", (3679521).

[10]The following figures were published in Current Industrial Reports Series MA36A, Switchgear, Switchboard Apparatus, Relays, and Industrial Controls:

Product	1967 millions	1963 millions
Total (Series MA36A).....	5,245.1	5,163.7
Switchboard relays.....	59.4	39.9
Circuit relays:		
A.c. and d.c. magnetic control....	171.4	114.2
Overload relays.....	14.3	9.6

The Series MA36A values, when added to the comparable values for relays for electronic applications, result in the following total for 1967, and 1963: respectively; 402.0 and 203.4.

[11]Figures on "Frequency synthesizers" and "Cryogenic cooling devices" are included with "Electronic parts, n.e.c., and specialized electronic hardware" (3679539) in order to avoid disclosing figures of individual companies.

[12]Figures on "Phase shifters" are included with "Circulators (electromagnetic), used as switches, modulators, etc.," to avoid disclosing figures of individual companies.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1] This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at the individual product level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

[2]For 1958 to 1962 and 1964 to 1966 product class 36629 was part of product class 36621.

[3]For 1966 prior years product class 36741 was included in product class 36795.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]From 10 to 30 percent of this figure was estimated.

[1]No data are available on the quantities of castings, fractional horsepower, electrical motors, electron tubes, cathode ray picture tubes and solid state semiconductors produced and consumed in the same establishment.

[2]Represents estimates published MC63(1)-8 (Supplement), Selected Materials Consumed, from data collected in a supplemental survey on Form MA-131, consumption of materials, parts, containers and supplies, during 1963. This survey was limited to large establishments in selected chemical, machinery and equipment industries and resulted in estimates which are subject to greater error than are the figures on materials consumption collected as a regular part of the census of manufactures.

[3]Includes the value of materials shown by the symbol "D".

[4]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967 this included estimates for companies that were not mailed report forms.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

MISCELLANEOUS ELECTRICAL EQUIPMENT AND SUPPLIES

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3691--Storage Batteries
3692--Primary Batteries, Dry and Wet
3693--Radiographic X-ray, Fluoroscopic X-ray, Therapeutic X-ray, and Other X-ray Apparatus and Tubes; Electromedical and Electrotherapeutic Apparatus
3694--Electrical Equipment for Internal Combustion Engines
3699--Electrical Machinery, Equipment and Supplies, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3691--STORAGE BATTERIES

This industry comprises establishments primarily engaged in manufacturing storage batteries. For a detailed list of products of industry 3691, refer to table 6A, product codes 3691113 to 3691298.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Storage Batteries Industry in 1967 totaled $578 million. This included shipments of storage batteries (primary products), valued at $563 million, shipments of other products (secondary products) valued at $3 million, and miscellaneous receipts (mainly resales) of $10 million.

This industry's shipments of storage batteries (primary products) in 1967 represented 98 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was also 98 percent.

Industry 3691 shipments of storage batteries (primary products) in 1967 represented 97 percent (coverage ratio) of these products valued at $579 million shipped by all industries. In 1963, the coverage ratio was 99 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3691, these establishments accounted for approximately 1 percent of payroll and value added by manufacture.

3692--PRIMARY BATTERIES, DRY AND WET

This industry comprises establishments primarily engaged in manufacturing primary batteries, dry or wet. For a detailed list of products of industry 3692, refer to table 6A, product codes 3692012 to 3692097.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Primary Batteries, Dry and Wet, Industry in 1967 totaled $308 million. This included shipments of primary batteries, dry and wet (primary products), valued at $283 million, shipments of other products (secondary products) valued at $9 million, and miscellaneous receipts (mainly resales) of $16 million.

This industry's shipments of primary batteries, dry and wet (primary products) in 1967 represented 97 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 96 percent.

Industry 3692 shipments of primary batteries, dry and wet (primary products) in 1967 represented 86 percent (coverage ratio) of these products valued at $328 million shipped by all industries. In 1963, the coverage ratio was 91 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3692, these establishments accounted for approximately 1 percent of payroll and value added by manufacture.

3693--RADIOGRAPHIC X-RAY, FLUOROSCOPIC X-RAY, THERAPEUTIC X-RAY, AND OTHER X-RAY APPARATUS AND TUBES; ELECTROMEDICAL AND ELECTROTHERAPEUTIC APPARATUS

This industry comprises establishments primarily engaged in manufacturing radiographic X-ray, fluoroscopic X-ray, and therapeutic X-ray apparatus and tubes for medical, industrial, research, and control applications. This industry also includes establishments primarily engaged in manufacturing electromedical and electrotherapeutic apparatus except electrotherapeutic lamp units for ultraviolet and infra-red radiation (industry 3641). Establishments primarily engaged in manufacturing radio receiving type tubes are classified in industry 3671; television receiving cathode ray tubes in industry 3672; and transmitting tubes in industry 3673. For a detailed list of products of industry 3693, refer to table 6A, product codes 3693019 to 3693096.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the X-Ray Apparatus and Tubes Industry in 1967 totaled $233 million. This included shipments of X-ray apparatus and tubes (primary products), valued at $154 million, shipments of other products (secondary products) valued at $12 million, and miscellaneous receipts (mainly resales) of $67 million.

This industry's shipments of X-ray apparatus and tubes (primary products) in 1967 represented 93 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 83 percent.

Industry 3693 shipments of X-ray apparatus and tubes (primary products) in 1967 represented 86 percent (coverage ratio) of these products valued at $180 million shipped by all industries. In 1963, the coverage ratio was 80 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3693, these establishments accounted for approximately 1 percent of payroll and value added by manufacture.

3694--ELECTRICAL EQUIPMENT FOR INTERNAL COMBUSTION ENGINES

This industry comprises establishments primarily engaged in manufacturing electrical equipment for internal combustion engines. Important products of this industry include starting motors, alternators, and generators for automobiles and aircraft; and ignition apparatus for internal combustion engines including spark plugs, magnetos, coils, and distributors. For a detailed list of products of industry 3694, refer to table 6A, product codes 3694111 to 3694698.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Engine Electrical Equipment Industry in 1967 totaled $1,365 million. This included shipments of engine electrical equipment (primary products), valued at $1,031 million, shipments of other products (secondary products) valued at $238 million, and miscellaneous receipts (mainly resales) of $95 million.

This industry's shipments of engine electrical equipment (primary products) in 1967 represented 81 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 93 percent.

Industry 3694 shipments of engine electrical equipment (primary products) in 1967 represented 85 percent (coverage ratio) of these products valued at $1,220 million shipped by all industries. In 1963, the coverage ratio was 81 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3694, these establishments accounted for approximately less than 1 percent of payroll and value added by manufacture.

3699--ELECTRICAL MACHINERY, EQUIPMENT AND SUPPLIES, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing electrical machinery, equipment, and supplies, not elsewhere classified. For a detailed list of products of industry 3699, refer to table 6A, product codes 3699211 to 3699600.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Electrical Equipment, N.E.C., Industry in 1967 totaled $291 million. This included shipments of electrical equipment, n.e.c. (primary products), valued at $252 million, shipments of other products (secondary products) valued at $18 million, and miscellaneous receipts (mainly resales) of $21 million.

This industry's shipments of electrical equipment, n.e.c. (primary products) in 1967 represented 93 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 90 percent.

Industry 3699 shipments of electrical equipment, n.e.c. (primary products) in 1967 represented 50 percent (coverage ratio) of these products valued at $506 million shipped by all industries. In 1963, the coverage ratio was 49 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3699, these establishments accounted for approximately 6 percent of payroll and value added by manufacture.

Note: In 1967, 1963, and 1958, the number of companies in industry 3691 was 154, 169, and 207, respectively; in industry 3692: 32, 26, and 24; industry 3693: 78, 56, and 124; industry 3694: 239, 163, and 147; industry 3699: 528, 245, and 247. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

[2]Includes an unspecified amount for plants under construction but not in operation.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

[1]Included in this industry are appliance wire and cord and flexible cord sets which are also primary to industry 3357, Nonferrous Wiredrawing, Etc. For 1967, a coverage ratio computed on the basis of including both industries to which appliance wire and cord and flexible cord sets are primary would total 85 percent; 50 percent by industry 3699, and 35 percent by industry 3357. The remaining 15 percent was shipped by establishments in other industries. For 1963, a coverage ratio computed on the basis of including both industries to which appliance wire and cord and flexible cord sets are primary would total 79 percent; 49 percent by industry 3699, and 30 percent by industry 3357. The remaining 21 percent was shipped by establishments in other industries.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]From 10 to 30 percent of this figure was estimated. [r]Revised.

[1]Motor vehicle parts data were published in the 1963 Census of Manufactures in Table 6E, Production and Use of Selected Parts of the Type Used for Passenger Cars, Trucks, and Busses, of report MC63(2)-37A, Motor Vehicles and Equipment. There are significant differences in the manner in which the data were developed in the two Censuses including the following:

a. In 1963 a total production figure was typically collected including, where appropriate, the quantities produced and consumed in the same establishment in producing a more finished product. In 1967 production figures were collected but are not published because they were incomplete.

b. In 1963 separate quantity data were reported for the quantities of equipment "used in the assembly of new vehicles." These data were collected from automobile assembly plants and included the quantities of parts produced and consumed in the assembly of new vehicles. For 1967 a value rather than a quantity figure was collected and the data were reported by the plants producing the parts rather than by the assembly plants. No values are included for the quantities of parts produced and consumed in the same plant. The value of parts shipped as interplant transfers from parts plants to assembly plants owned by the same company are included in both 1963 and 1967.

c. In 1963 the quantity of parts "for replacement, export, and other purposes" was derived by subtracting from the total number of units produced the quantities used in the assembly of new vehicles as reported by motor vehicle assembly plants. In 1967 the quantity and value shipped by parts producers for replacement was reported separately and, in addition, a value of export shipments was reported by parts producing plants.

[2]Data are limited to rebuilding on a factory basis. Rebuilding operations performed in service stations, garages, etc., are excluded from the census of manufactures. Also, these figures may be somewhat understated because of the exclusion of data for establishments with fewer than 10 employees. Such establishments were typically not included in the mail portion of the 1967 Census of Manufactures, but were included in the published data by the use of estimates from administrative records. These estimates are included in the value shown for product code 3694002. Although the use of such administrative records tends to create a small understatement for most specific products, the effect is more significant for those products typically produced in small establishments, such as rebuilding facilities.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at the individual product level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

[1]Includes cost of materials for which the symbol "D" appears.

[2]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967, this includes estimates for companies that were not mailed report forms.

[3]No data are available for the quantities of castings produced and consumed in the same establishment.

[4]No data are available on the quantities of electron tubes or solid state semiconductors produced and consumed in the same establishment.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization–the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization–the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

TABLE 9. Establishments and Production Workers for Selected Metalworking Operations: 1967

To be published in a separate subject chapter titled "Selected Metalworking Operations"

Transportation Equipment

37A Motor vehicles and equipment

37B Aircraft and parts

37C Ship and boat building, railroad and miscellaneous transportation equipment

This major group covers establishments primarily engaged in manufacturing equipment for transportation of passengers and cargo by land, air, and water. Important products produced by establishments classified in this major group include motor vehicles, aircraft, ships, boats, railroad equipment, and miscellaneous transportation equipment such as motorcycles, bicycles, etc.

The Standard Industrial Classification System (1967 edition) includes, in Industry Group 372, guided missile components, not elsewhere classified, and receipts from research and development on aircraft parts, guided missile components, not elsewhere classified, and airplane and missile engines.

Certain products which are sometimes associated with or considered a part of transportation equipment are classified in other major groups in the Standard Industrial Classification System. For example, wheeltype tractors, tracklaying tractors, mining cars, and industrial trucks, tractors, trailers, and stackers are in Major Group 35; and ignition systems and storage batteries, in Major Group 36.

Railroad shops are not classified as manufacturing by the Standard Industrial Classification System and, therefore, such activities are not included in employment and other establishment totals for Major Group 37 or Industry Group 374. However, such shops were requested to report the quantity and value of locomotives and railroad cars built or rebuilt. Data on railroad cars built or rebuilt in railroad shops are included only in table 6A-2 for industry 3742.

[1]The figures for 1939 through 1967 include data for employees of manufacturing establishments who are engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known.

[2]For the period 1954 to 1967 figures represent adjusted value added by manufacture and for earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year, without adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. See Introduction, "Value Added by Manufacture."

[3]The total value of shipments and cost of materials for industry groups (2- and 3-digit) includes extensive duplication arising from shipments between establishments in the same industry classification. For a more complete explanation, see Introduction.

[4]The figures for 1958 to 1967 include expenditures for plants under construction and not yet in operation.

[5]In addition to data for operating establishments, figures for employment and payroll for manufacturing central administrative offices and auxiliary units are shown for the years 1949 to 1953 in the annual survey of manufactures volumes. Data for these units are not available for the years 1955 to 1957, 1959 to 1962, 1964 to 1966, or prior to 1949.

[6]Figures for 1958 to 1963 for operating manufacturing establishments are not strictly comparable with prior years due to revisions of the Standard Industrial Classification System. Prior to 1958, establishments primarily engaged in the manufacture of truck and bus bearings, convertible tops for automobiles, rebuilt automotive parts, and aircraft and related engine and power take-off gears, were excluded from these data. Establishments primarily engaged in the manufacture of parachutes are included in data prior to 1958.

[7]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

[8]The figures for 1939, but not for 1937, have been revised for comparability with the figures for later years. The principal revision is the exclusion of data for railroad repair shops reclassified as nonmanufacturing establishments. Value added by manufacture for 1939 on a basis strictly comparable with 1937 was $1,794 million.

[9]The figures for 1935 and earlier years are not sufficiently comparable with those for later years to be shown in this table because the earlier figures exclude data for establishments primarily engaged in the manufacture of aircraft engines and for a number of large establishments classified prior to 1937 in other industry groups.

[10]Data for 1963 to 1966 have been revised by the exclusion of automotive stamping plants operated by automobile producing companies. As a result of this revision, these plants are now classified in the metals stampings industry. The area data for prior years have not been revised on a basis comparable to 1967 but are shown in table 2 on the unrevised basis.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]The value of shipments and cost of materials for industry groups (2- and 3-digit) includes extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

[3]Unrevised. See footnote 10, table 1.

[1]The value of shipments and cost of materials for industry groups (2- and 3-digit) includes extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

MOTOR VEHICLES AND EQUIPMENT

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3711--Motor Vehicles
3713--Truck and Bus Bodies
3714--Motor Vehicle Parts and Accessories
3715--Truck Trailers (Full)

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3711--MOTOR VEHICLES

This industry comprises establishments primarily engaged in manufacturing or assembling complete passenger automobiles, trucks, commercial cars and busses (except trackless trolleys--industry 3742), special purpose motor vehicles and passenger car bodies (SIC 3712). Such establishments may also manufacture motor vehicle parts, but establishments primarily engaged in manufacturing motor vehicle parts and which are not engaged in manufacturing complete motor vehicles are classified in industry 3714. Establishments primarily engaged in manufacturing truck and bus bodies and assembling them on purchased chassis are classified in industry 3713; motorcycles in industry 3751; wheel tractors, except contractors' off-highway types, in industry 3522; tracklaying and contractors' off-highway tractors in industry 3531; and combat tanks in industry 1931. For a detailed list of products of industry 3711, refer to table 6A, product codes 3711111 to 3711511.

Prior to 1967, tabulation of data for the automotive industry was based on use of census code 3717. For 1967 data were collected based on the classification of establishments as defined in the 1967 edition of the Standard Industrial Classification (SIC) Manual. An exception is made in this report in that SIC 3711 and SIC 3712 have been combined.

Value of shipments and other receipts of the Motor Vehicles Industry in 1967 totaled $27,296 million. This included shipments of motor vehicles (primary products), valued at $25,832 million, shipments of other products (secondary products) valued at $1,045 million, and miscellaneous receipts (mainly products bought and resold) of $419 million.

This industry's shipments of motor vehicles (primary products) in 1967 represented 96 percent (specialization ratio) of its total product shipments (primary and secondary). Secondary products shipped by this industry in 1967 consisted mainly of motor vehicle parts and accessories ($753 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 79 percent of the total industry shipments are represented by plants specializing in product class 37111, Passenger Cars.

Industry 3711 shipments of motor vehicles (primary products) in 1967 represented over 99 percent (coverage ratio) of these products valued at $25,922 million shipped by all industries.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3711, these establishments accounted for less than 1 percent of payroll and value added by manufacture.

3713--TRUCK AND BUS BODIES

This industry comprises establishments primarily engaged in manufacturing truck and bus bodies, for sale separately or for assembly on purchased chassis. Establishments primarily engaged in manufacturing complete trucks and busses are classified in industry 3711, and stamped body parts for trucks and busses in industry 3461. For a detailed list of products of industry 3713, refer to table 6A, product codes 3713012 to 3713099.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Truck and Bus Bodies Industry in 1967 totaled $706 million. This included shipments of truck and bus bodies (primary products), valued at $549 million, shipments of other products (secondary products) valued at $99 million, and miscellaneous receipts (mainly products bought and resold) of $59 million.

This industry's shipments of truck and bus bodies (primary products) in 1967 represented 85 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 88 percent. Secondary products shipped by this industry in 1967 consisted mainly of truck trailers ($25 million), and motor vehicle parts and accessories ($25 million).

Industry 3713 shipments of truck and bus bodies (primary products) in 1967 represented 92 percent (coverage ratio) of these products valued at $595 million shipped by all industries. In 1963, the coverage ratio was 86 percent. Other industries shipping truck and bus bodies (primary products) included industry 3715, Truck Trailers,$12 million; and industry 3711, Motor Vehicles,$70 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3713, these establishments accounted for 2 percent of payroll and 2 percent of value added by manufacture.

3714--MOTOR VEHICLE PARTS AND ACCESSORIES

This industry comprises establishments primarily engaged in manufacturing motor vehicle parts and accessories, but not engaged in manufacturing complete motor vehicles. Establishments primarily engaged in manufacturing or assembling complete automobiles and trucks are classified in industry 3711, tires and tubes in industry 3011, automobile glass in Major Group 32, automobile stampings in industry 3461, vehicular lighting equipment in industry 3642, ignition systems in industry 3694, and storage batteries in industry 3691. For a detailed list of products of industry 3714, refer to table 6A, product codes 3714111 to 3714398.

Prior to 1967, tabulation of data for the automotive industry was based on use of census code 3717. For 1967 data were collected based on the classification of establishments as defined in the 1967 edition of the Standard Industrial Classification (SIC) Manual.

Value of shipments and other receipts of the Motor Vehicle Parts and Accessories Industry in 1967 totaled $11,624 million. This included shipments of motor vehicle parts and accessories (primary products), valued at $10,320 million, shipments of other products (secondary products) valued at $1,122 million, and miscellaneous receipts of $18 million.

This industry's shipments of motor vehicles parts and accessories (primary products) in 1967 represented 90 percent (specialization ratio) of its total product shipments (primary and secondary). Secondary products shipped by this industry in 1967 included internal combustion engines, n.e.c. ($87 million).

Industry 3714 shipments of motor vehicles parts and accessories (primary products) in 1967 represented 88 percent (coverage ratio) of these products valued at $11,735 million shipped by all industries. Other industries shipping motor vehicle parts and accessories (primary products) consisted mainly of industry 3711, Motor Vehicles,$753 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3714, these establishments accounted for less than 1 percent of payroll and value added by manufacture.

3715--TRUCK TRAILERS (FULL)

This industry comprises establishments primarily engaged in manufacturing truck trailers and truck trailer chassis for sale separately, but not engaged in manufacturing complete trucks and busses. For a detailed list of products of industry 3715, refer to table 6A, product codes 3715003 to 3715055.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Truck Trailers Industry in 1967 totaled $714 million. This included shipments of truck trailers (primary products), valued at $642 million, shipments of other products (secondary products) valued at $40 million, and miscellaneous receipts of $32 million.

This industry's shipments of truck trailers (primary products) in 1967 represented 94 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 92 percent. Secondary products shipped by this industry in 1967 included truck and bus bodies ($12 million).

Industry 3715 shipments of truck trailers (primary products) in 1967 represented 91 percent (coverage ratio) of these products valued at $702 million shipped by all industries. In 1963, the coverage ratio was 93 percent. Other industries shipping truck trailers (primary products) included industry 3713, Truck and Bus Bodies,$25 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3715, these establishments accounted for less than 1 percent of payroll and value added by manufacture.

Note: In 1967, 1963, and 1958, the number of companies in industry 3711 was 107, and respectively; in industry 3713: 620, 594, and 550; industry 3714: 1424, and industry 3715: 147, 175, and 154. In 1963 and 1958, the number of companies in industry 3717 (for 1967, codes 3711 and 3714) was 1,655, and 1,257. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

(*) These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]The combined data for industries 3711 and 3714 for 1967 are not strictly comparable with the data for industry 3717 as published in the 1967 preliminary report Series MC67(P)-1, General Statistics for Industry Groups and Industries, because some metal stampings plants were included in the preliminary report. Also, it does not reflect some company reorganization changes.

[2]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[3]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

[4]Includes extensive duplication arising from shipments between establishments in the same industry classification.

[5]Data for 1963 to 1966 have been revised by the exclusion of automotive stamping plants operated by automobile producing companies. As a result of this revision, these plants are now classified in the metals stampings industry. The data shown including such plants (unrevised) for the years 1958 to 1966 are as previously published for this industry. The area data for prior years have not been revised on a basis comparable to 1967 but are shown in table 2 on the unrevised basis.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated.

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250 to 499 employees
CC - 500 to 999 employees
EE - 1,000 to 2,499 employees
FF - 2,500 employees and over

[2]Data for 1963 are not comparable to the 1967 information. (See footnote 1, table 1.)

[3]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [e] Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1] Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

See footnotes on next page.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

Footnotes for table 6A-37A—Continued

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [6]From 10 to 30 percent of this figure was estimated.

[1]For 1963, product codes 3711411, combat vehicles, and 3711000, motor vehicles n.s.k., were combined with product code 3714000, Motor vehicle parts and accessories.

[2]These figures represent fire department vehicles produced on chassis of own manufacture. Separate figures are shown for fire department vehicles produced on purchased chassis (code 3713077). A small number of fire department vehicles are produced on chassis furnished by customers.

[3]Truck and bus bodies built by garages, service stations, and other establishments primarily engaged in nonmanufacturing activities are excluded.

[4]Motor vehicle parts data were published in the 1963 Census of Manufactures in Table 6E, "Production and Use of Selected Parts of the Type Used for Passenger Cars, Trucks, and Buses," of report MC63(2)-37A, Motor Vehicles and Equipment. There are significant differences in the manner in which the data were developed in the two Censuses including the following:

a. In 1963, a total production figure was typically collected including, where appropriate, the quantities produced and consumed in the same establishment in producing a more finished product. In 1967 production figures were collected but could not be published because they were incomplete.

b. In 1963, separate quantity data were reported for the quantities of equipment "used in the assembly of new vehicles." These data were collected from automobile assembly plants and included the quantities of parts produced and consumed in the assembly of new vehicles. For 1967 a value, rather than a quantity figure was collected and the data were reported by the plants producing the parts rather than by the assembly plants. No values are included for the quantities of parts produced and consumed in the same plant. The value of parts shipped as interplant transfers from parts plants to assembly plants owned by the same company are included in both 1963 and 1967.

c. In 1963, the quantity of parts "for replacement, export, and other purposes" was derived by subtracting from the total number of units produced the quantities used in the assembly of new vehicles as reported by motor vehicle assembly plants. In 1967, the quantity and value shipped by parts producers for replacement was reported separately and, in addition, a value of export shipments was reported by parts producing plants.

[5]Data for motor vehicle parts and accessories for 1963 have been revised to exclude the output of the automotive stampings plants operated by automobile producing companies.

[6]This figure is limited to shipments of products classified in industry 3714. There were additional shipments of motor vehicle parts by parts producers to other than motor vehicle manufacturers. This includes spark plugs, ignition coils, storage batteries, carburetors, pistons and pistons rings, and springs which are classified outside the 3714 grouping and which approximated $528.5 million.

[7]Data are limited to rebuilding on a factory basis. Rebuilding operations performed in service stations, garages, etc., are excluded from the census of manufactures. Also, these figures may be somewhat understated because of the exclusion of data for establishments with fewer than 10 employees. Such establishments were typically not included in the mail portion of the 1967 Census of Manufactures, but were included in the published data by the use of estimates from administrative records. These estimates are included in the value shown for product code 3714002. Although the use of such administrative records tends to create a small understatement for most specific products, the effect is more significant for those products typically produced in small establishments, such as rebuilding facilities.

[8]In 1963, livestock type closed vans were not reported separately. They were included as drop-frame type.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0.....	AA	$10.0 to $20.0.....	EE
$2.0 to $5.0.....	BB	$20.0 to $50.0.....	FF
$5.0 to $10.0.....	CC	$50.0 and over.....	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operation. See Appendix, Explanation of terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The Census series and related data.

[2]Prior to 1967, figures for product class 37114, Combat vehicles, and 37110, Motor vehicles, n.s.k., were included with product class 37140, Motor vehicle parts and accessories.

[3]Prior to 1967, figures for product class 37115, Passenger car bodies, were included with product class 37141, Parts and accessories for motor vehicles.

[4]Data for 1963 to 1966 have been revised to exclude automotive job stampings shipped by establishments operated by automotive companies.

[1]Data for these materials have been revised to exclude the consumption of materials by automotive stamping plants operated by automobile producing plants. Most of these plants had previously been classified in this industry.

[2]These figures are understated by between $15 and $25 million because of apparent undercoverage of carbon steel pipe and tube.

[3]Included with material code 970099, "All other materials and components, etc."

[4]No data are available for the quantities of castings, forgings or fractional horsepower electric motors produced and consumed in the same establishment.

[5]Includes cost of those materials for which the symbol "D" appears.

[6]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967 this includes estimates for companies that were not mailed report forms.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization–the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization–the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

TABLE 9. Establishments and Production Workers for Selected Metalworking Operations: 1967

(To be published in a separate subject chapter titled "Selected Metalworking Operations.")

AIRCRAFT AND PARTS

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3721--Aircraft
3722--Aircraft Engines and Engine Parts
3729--Aircraft Parts and Auxiliary Equipment, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3721--AIRCRAFT

This industry comprises establishments primarily engaged in manufacturing or assembling complete aircraft. This industry also includes establishments primarily engaged in factory type aircraft modification on a contract or fee basis. Establishments primarily engaged in manufacturing engines, propellers, and other aircraft parts and auxiliary equipment are classified in industries 3722 and 3729. In industry 3721 there is usually a significant difference between value of actual physical shipments and value of work done during a specified period. This is primarily due to lead time between the input of materials and labor and the shipments of completed aircraft. In evaluating the internal relationships of the Aircraft Industry, such as the ratio of cost of materials or payrolls to output, the value of aircraft shipments for the year is generally not meaningful and value of work done is therefore substituted. This statistic included total costs (materials, labor, overhead, etc.) and reflected the value of work done during the year, including work done on aircraft not accepted during the year, but excluding the value of work done in prior years. For a detailed list of products of industry 3721, refer to table 6A, product codes 3721121 to 3721655.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of work done and other receipts of the Aircraft Industry in 1967 totaled $11,080 million. This included work done on aircraft (primary products), valued at $8,929 million, shipments of other products (secondary products) valued at $1,871 million, and miscellaneous receipts (mainly sales of products bought and resold) of $280 million.

This industry's value of work done on aircraft (primary products) in 1967 represented 83 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 69 percent. Secondary products shipped by this industry in 1967 consisted mainly of aircraft parts and auxiliary equipment ($1,320 million), and complete guided missiles ($435 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 59 percent of the total industry shipments are represented by plants specializing in product class 37211, Complete military aircraft.

Industry 3721 value of work done on aircraft (primary products) in 1967 represented 97 percent (coverage ratio) of these products valued at $9,172 million shipped by all industries. In 1963, the coverage ratio was 96 percent. Other industries performing work on aircraft (primary products) consisted mainly of Industry 3729, Aircraft Equipment, N.E.C., $166 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3721, these establishments accounted for approximately 1 percent of payroll and value added by manufacture.

3722--AIRCRAFT ENGINE AND ENGINE PARTS

This industry comprises establishments primarily engaged in manufacturing aircraft engines and engine parts. For a detailed list of products of industry 3722, refer to table 6A, product codes 3722111 to 3722813.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Aircraft Engines and Parts Industry in 1967 totaled $5,290 million. This included shipments of aircraft engines and engine parts (primary products), valued at $4,420 million, shipments of other products (secondary products) valued at $607 million, and miscellaneous receipts (mainly sales of products bought and resold) of $262 million.

This industry's shipments of aircraft engines and engine parts (primary products) in 1967 represented 88 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 87 percent. Secondary products shipped by this industry in 1967 included aircraft parts and auxiliary equipment ($135 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 31 percent of the total industry shipments are represented by plants specializing in product class 37222, Aircraft engines for other than U.S. military customers; and 22 percent in product class 37221, Aircraft engines for U.S. military customers.

Industry 3722 shipments of aircraft engines and parts (primary products) in 1967 represented 92 percent (coverage ratio) of these products valued at $4,782 million shipped by all industries. In 1963, the coverage ratio was 93 percent. Other industries

shipping aircraft engines and parts (primary products) included industry 3729, Aircraft Equipment, N.E.C., $112 million; and industry 3722, Aircraft Engines and Engine Parts, $62 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3722, these establishments accounted for approximately 1 percent of payroll and value added by manufacture.

3729--AIRCRAFT PARTS AND AUXILIARY EQUIPMENT, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing aircraft parts and auxiliary equipment, including propellers and propeller parts not elsewhere classified. Establishments primarily engaged in manufacturing or assembling complete aircraft are classified in industry 3721, aircraft engines and parts in industry 3722, aeronautical instruments in industry 3811, and aeronautical electrical equipment in industry 3694. For a detailed list of products of industry 3729, refer to table 6A, product codes 3729113 to 3729531.

The code number for this industry in the Standard Industrial Classification Manual is unchanged, but the content of the industry has been significantly changed from the classification system used in 1963. The change in composition of the industry as now constituted, compared with that under the classification system followed in the 1963 Census, is due principally to the addition of aircraft propellers and propeller parts, which was formerly industry 3723.

Value of shipments and other receipts of the Aircraft Equipment, N.E.C., Industry in 1967 totaled $4,694 million. This included shipments of aircraft equipment, n.e.c. (primary products), valued at $3,545 million, shipments of other products (secondary products) valued at $1,012 million, and miscellaneous receipts of $138 million.

This industry's shipments of aircraft equipment, n.e.c. (primary products) in 1967 represented 78 percent (specialization ratio) of its total product shipments (primary and secondary). Secondary products shipped by this industry in 1967 included aircraft ($166 million), complete guided missiles ($123 million), and aircraft engines and engine parts ($112 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 69 percent of the total industry shipments are represented by plants specializing in product class 37291, Aircraft parts and auxiliary equipment; and 11 percent in 37292, Guided missile conponents and subassemblies, n.e.c.

Industry 3729 shipments of aircraft equipment, n.e.c., (primary products) in 1967 represented 64 percent (coverage ratio) of these products valued at $5,542 million shipped by all industries. Other industries shipping aircraft equipment, n.e.c. (primary products) consisted mainly of industry 3721, Aircraft, $1,320 million; industry 3722, Aircraft Engines and Engine Parts, $135 million; and industry 1925, Complete Guided Missiles, $196 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3729, these establishments accounted for approximately 1 percent of payroll and value added by manufacture.

Note: In 1967, 1963, and 1958, the number of companies in industry 3721 was 91, 82, and 113, respectively; in industry 3722: 205, 194, and 186; industry 3729: 825, 948, and 1165. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

[3]Establishments in this industry reported value of work done rather than value of shipments. Consequently the formula for computing value added by manufacture was not adjusted for inventory change between the beginning and end of the year. It does include value added by resale.

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

[1]Represents value of work done rather than value of shipments.

[2]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

37290 02	Aircraft parts and auxiliary equipment, n.e.c., n.s.k. (Represents establishments with fewer than 10 employees in 1967. See Note.)	(x)	9.6		

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]From 10 to 30 percent of this figure was estimated.

[1]Data represents receipts, billings or value of work done, including modifications, conversions, and overhaul of previously accepted aircraft, and other aeronautical services (including research and development on aircraft.)

[2]For 1963 and 1967, data on research and development on aircraft engines for other than United States military customers are included with "All other aeronautical services on aircraft engines for other than United States military customers" to avoid disclosing figures of individual companies.

[3]Represents receipts or billings.

[4]Those products were previously identified as product class 37230.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1] This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at the individual product level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

[2]Figures represent value of work done rather than value of shipments.

[3]For 1954 to 1962, data for complete missile or space vehicle engines and/or propulsion units were included with aircraft engines.

[4]For 1954 to 1962, data on receipts for research and development on complete missile or space vehicle engines and/or propulsion units, and, all other services on complete missile or space vehicle engines and/or propulsion units, were included with receipts for research and development on aircraft engines.

[5]For 1954 to 1962, data on missile and space vehicle engine and/or propulsion unit parts or accessories were included with aircraft engine parts and accessories.

[6]For years previous to 1967, aircraft propellers and propeller parts were identified as product class 37230.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization–the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization–the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

[1]For years prior to 1967, aircraft propellers and propeller parts were identified as product class 37230.

SHIP AND BOAT BUILDING, RAILROAD AND MISCELLANEOUS TRANSPORTATION EQUIPMENT

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3731--Ship Building and Repairing
3732--Boat Building and Repairing
3741--Locomotives and Parts
3742--Railroad and Street Cars
3751--Motorcycles, Bicycles, and Parts
3791--Trailer Coaches
3799--Transportation Equipment, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3731--SHIP BUILDING AND REPAIRING

This industry comprises establishments primarily engaged in building and repairing all types of ships, barges, and lighters, whether propelled by sail or motor power or towed by other craft. This industry also includes the conversion and alteration of ships. Establishments primarily engaged in fabricating structural assemblies or components for ships or subcontractors engaged in ship painting, joinery, carpentry work, electrical wiring installation, etc., are not classified in this industry. For a detailed list of products of industry 3731, refer to table 6A, product codes 3731111 to 3731659.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

The total value of work done and other receipts of the Ship Building and Repairing Industry in 1967 totaled $2,518 million. This included receipts from ship building and repairing (primary products), valued at $2,315 million, shipments of other products (secondary products) valued at $129 million, and miscellaneous receipts of $75 million.

The value of ship building and repairing represents value of work done during the year. This provides a more adequate measure of the activity in this industry than value of vessels completed and delivered, primarily because of the production cycle, which may be several years for some vessels. Value of shipments (deliveries) would result in a distortion for extablishments working on a vessel all year, but not completing it during the year or, for establishments completing and delivering a vessel during a year when most of the work was performed in previous years. Respondents were requested to compute the value of work done by including the cost of labor, the cost of purchased materials and parts received during 1967, overhead and profits by one of the following methods: (1) estimating the percentage of completion during 1967, (2) reporting net billings for work done during 1967, or (3) reporting payments received for work done during 1967.

This industry's receipts for ship building and repairing (primary products) in 1967 represented 95 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 92 percent. Secondary products shipped by this industry in 1967 included fabricated structural steel ($41 million) and boat building and repairing ($21 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 53 percent of the total value of work done is represented by plants specializing in product class 37312, self propelled ships, new construction.

Industry 3731 receipts for ship building and repairing (primary products) in 1967 represented 98 percent (coverage ratio) of these products valued at $2,358 million shipped by all industries. In 1963, the coverage ratio was 99 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3731, these establishments accounted for 1.0 percent of payroll and 0.2 percent of value added by manufacture.

3732--BOAT BUILDING AND REPAIRING

This industry comprises establishments primarily engaged in building and repairing all types of boats, except rubber boats (industry 3069). Establishments primarily engaged in cleaning and storing boats and in the rental of dock space, and yacht clubs are classified in nonmanufacturing industries. For a detailed list of products of industry 3732, refer to table 6A, product codes 3732111 to 3732421.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Boat Building and Repairing Industry in 1967 totaled $571 million. This included shipments of boat building and repairing (primary products), valued at $522 million, shipments of other products (secondary products) valued at $22 million, and miscellaneous receipts (mainly products bought and resold) of $28 million.

This industry's shipments of boat building and repairing (primary products) in 1967 represented 96 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 97 percent. Secondary products shipped by this industry in 1967 included ship building and repairing ($8 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 35 percent of the total industry shipments are represented by plants specializing in product class 37321, inboard motorboats.

Industry 3732 shipments of boat building and repairing (primary products) in 1967 represented 91 percent (coverage ratio) of these products valued at $571 million shipped by all industries. In 1963, the coverage ratio was 95 percent. Other industries shipping boat building and repairing (primary products) consisted mainly of industry 3731, Ship Building and Repairing, $21 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3732, these establishments accounted for 7 percent of payroll and 8 percent of value added by manufacture.

3741--LOCOMOTIVES AND PARTS

This industry comprised establishments primarily engaged in building and rebuilding locomotives (including frames and parts, not elsewhere classified) of any type or gauge. Railroad shops rebuilding and repairing locomotives, or building new locomotives, are classified in Major Group 40. For a detailed list of products of industry 3741, refer to table 6A, product codes 3741144 to 3741311.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Locomotive and Parts Industry in 1967 totaled $690 million. This included shipments of locomotives and parts (primary products), valued at $523 million.

This industry's shipments of locomotives and parts (primary products) in 1967 represented (80-85) percent (specialization ratio) of its total products shipments (primary and secondary). The industry specialization ratio in 1963 was 83 percent.

Industry 3741 shipments of locomotives and parts (primary products) in 1967 represented 92 percent (coverage ratio) of these products valued at $569 million shipped by all industries. In 1963, the coverage ratio was 90 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3741, these establishments accounted for 0.1 percent of payroll and 0.1 percent of value added by manufacture.

3742--RAILROAD AND STREET CARS

This industry comprises establishments primarily engaged in building and rebuilding railroad, street, and rapid transit cars and car equipment for operation on rails for freight and passenger service. This industry also includes establishments primarily engaged in manufacturing trackless trolley busses. Establishments primarily engaged in manufacturing mining cars are classified in industry 3532. Repair shops, owned and operated by railroads or local transit companies, rebuilding or repairing cars, or building new cars for their own account, are classified in Major Groups 40 and 41. For a detailed list of products of industry 3742, refer to table 6A, product codes 3742111 to 3742351.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Railroad and Street Cars Industry in 1967 totaled $1,421 million. This included shipments of railroad and street cars (primary products), valued at $1,307 million, shipments of other products (secondary products) valued at $76 million, and miscellaneous receipts of $38 million.

This industry's shipments of railroad and street cars (primary products) in 1967 represented 95 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 91 percent.

Industry 3742 shipments of railroad and street cars (primary products) in 1967 represented 95 percent (coverage ratio) of these products valued at $1,374 million shipped by all industries. In 1963, the coverage ratio was 93 percent. Other industries shipping railroad and street cars (primary products) included industry 3441, Fabricated Structural Steel, $18 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3742, these establishments accounted for 0.1 percent of payroll and 0.1 percent of value added by manufacture.

3751--MOTORCYCLES, BICYCLES, AND PARTS

This industry comprises establishments primarily engaged in manufacturing motorcycles, bicycles, and similar equipment and parts. Establishments primarily engaged in assembling motorcycles or bicycles from purchased parts are also included in this industry. Establishments primarily engaged in manufacturing children's vehicles, except bicycles, are classified in industry 3943. For a detailed list of products of industry 3751, refer to table 6A, product codes 3751013 to 3751081.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Motorcyles, Bicycles, and Parts Industry in 1967 totaled $300 million. This included shipments of motorcycles, bicycles, and parts (primary products), valued at $251 million, shipments of other products (secondary products) valued at $31 million, and miscellaneous receipts (mainly products bought and resold) of $17 million.

This industry's shipments of motorcycles, bicycles, and parts (primary products) in 1967 represented 89 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 83 percent.

Industry 3751 shipments of motorcyles, bicycles, and parts (primary products) in 1967 represented 96 percent (coverage ratio) of these products valued at $263 million shipped by all industries. In 1963, the coverage ratio was 93 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3751, these establishments accounted for 1 percent of payroll and 1 percent of value added by manufacture.

3791--TRAILER COACHES

This industry comprises establishments primarily engaged in manufacturing trailer coaches (mobile dwellings) for attachment to passenger cars, and pickup coaches (campers) for mounting on pickup trucks. For a detailed list of products of industry 3791, refer to table 6A, product codes 3791021 to 3791041.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Trailer Coaches Industry in 1967 totaled $1,325 million. This included shipments of trailer coaches (primary products), valued at $1,288 million, shipments of other products (secondary products) valued at $10 million, and miscellaneous receipts (mainly products bought and resold) of $27 million.

This industry's shipments of trailer coaches (primary products) in 1967 represented 99 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 98 percent.

Industry 3791 shipments of trailer coaches (primary products) in 1967 represented 99 percent (coverage ratio) of these products valued at $1,296 million shipped by all industries. In 1963, the coverage ratio was also 99 percent. Other industries shipping trailer coaches (primary products) consisted mainly of Industry 3711 Motor Vehicles, over $2 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3791, these establishments accounted for 1 percent of payroll and 1 percent of value added by manufacture.

3799--TRANSPORTATION EQUIPMENT, N.E.C.

This industry comprises establishments primarily engaged in manufacturing transportation equipment, not elsewhere classified. Establishments primarily engaged in manufacturing industrial trucks, tractors, trailers, and stackers are classified in industry 3537, and children's vehicles, except bicycles, in industry 3943. For a detailed list of products of industry 3799, refer to table 6A, product codes 3799121 to 3799298.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Transportation Equipment, N.E.C., Industry in 1967 totaled $284 million. This included shipments of transportation equipment, n.e.c. (primary products), valued at $258 million, shipments of other products (secondary products) valued at $16 million, and miscellaneous receipts (mainly products bought and resold) of $10 million.

This industry's shipments of transportation equipment, n.e.c. (primary products) in 1967 represented 94 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 89 percent. Secondary products shipped by this industry in 1967 included farm machinery ($5 million).

Industry 3799 shipments of transportation equipment, n.e.c. (primary products) in 1967 represented 75 percent (coverage ratio) of these products valued at $342 million shipped by all industries. In 1963, the coverage ratio was also 75 percent. Other industries shipping transportation equipment, n.e.c. (primary products) included industry 3522, Farm Machinery, $31 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3799, these establishments accounted for 5 percent of payroll and 4 percent of value added by manufacture.

Note: In 1967, 1963, and 1958, the number of companies in industry 3731 was 389, 305, and 286, respectively; in industry 3732: 1,565, and 1,626; industry 3741: 26, 23, and 24; industry 3742: 79, 68, and 56; industry 3751: 87, 85, and 49; industry 3791: 708, 348, and 363; industry 3799; 442, 507, and 253.

The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (*) These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

[3]Establishments in this industry reported value of work done rather than value of shipments. Consequently, the formula for computing value added by manufacture was not adjusted for inventory change between the beginning and end of the year. It does include value added by resale.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under $50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250 to 499 employees
CC - 500 to 999 employees
EE - 1,000 to 2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

[1] Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

[2] Includes an unspecified amount for plants under construction but ont in operation.

[3] Represents value of work done rather than value of shipments.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text, are included in the code ending with "002". Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]The total value of work done for ship building and repairing differs from "value of shipments." See text for explanation. However, the figures for codes 37311 11 through 37311 81, 37313 11 and 37313 21 represent value of shipments.

[2]Excludes products manufactured by facilities operated by the Department of Defense, or at Federal, District of Columbia, and State prisons.

[3]Prefabricated boat construction kits are included with utility boats for 1967.

[4]Data exclude parts shipped by railroad repair shops. No new or rebuilt locomotives were produced in railroad repair shops in 1963 and data for 1967 are suppressed to avoid disclosing the operations of individual companies.

[5]In 1963, rebuilt locomotives were included with code 37413 11, parts for locomotives, etc. In 1967, rebuilt locomotives are included with new locomotives.

[6]Excludes new and rebuilt railroad cars shipped by shops of operating railroads. See table 6A-2.

[1]Value of railroad cars built by railroads for own use represents the amounts at which they were written into property accounts.

[2]A passenger and freight train car is defined as rebuilt when the cost of dismantling, improvement and modernization is more than 50 percent of the replacement cost of a new unit of the same class and kind at the time of rebuilding. Conversions, reclassifications on units which were reconditioned by replacement of defective parts are not included.

[3]Excludes parts for passenger and freight cars, made in railroad car shops.

[4]The 1963 product codes 37421 11, 37421 98, 37422 45, 37422 98 and 37423 31 are included with the figures for "other cars" (code 37423 13.)

[5]The 1967 product codes 37422 34, 37422 43, 37422 45, and 37423 31 are included with the figure for "other cars" (code 37423 13.)

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses in the value of shipments columns either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data.

[2]Represents value of work done rather than value of shipments.

[3]For 1967, rebuilt locomotives are included with new locomotives. For prior years, rebuilt locomotives were included with parts for locomotives.

[4]Data include value of new and rebuilt railroad cars made in railroad car shops. The 1947 total and detailed statistics include $37.9 million of new railroad cars shipped by railroad repair shops. Value of railroad cars built by railroads for own use represent amounts at which they were written into property accounts.

[5]Product class 37422 includes an undetermined value from product class 37423.

[6]Includes an undetermined value of other automobile trailers (boat, camping, commercial display, etc.).

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. In some cases figures which are otherwise publishable are withheld to avoid indirect disclosure by substration from higher level totals or from related figures. [e]From 10 to 30 percent of this figure was estimated.

[1]No data are available on the quantities of castings, iron and steel forgings, engines, or integral horsepower electric motors and generators produced and consumed in the same establishment except for industry 3742 which had 11.8 thousand short tons of iron castings in 1963.

[2]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967, this includes estimates for companies that were not mailed report forms.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Instruments and Related Products

38A Instruments; surgical, dental, and ophthalmic equipment and supplies

38B Photographic equipment; clocks, watches, and watchcases

This major group covers establishments primarily engaged in manufacturing mechanical measuring, engineering, laboratory, and scientific research instruments; optical instruments and lenses; surgical, medical, and dental instruments, equipment and supplies; ophthalmic goods; photographic equipment and supplies; and, watches and clocks. Establishments primarily engaged in manufacturing instruments for indicating, measuring, and recording electrical quantities and characteristics are classified in industry 3611.

During the period 1958 to 1963, reports received from some large establishments indicated a change from the manufacture primarily of such individual instruments as those used for indicating air speed, rate-of-climb, angle-of-yaw and similar flight characteristics, and gyroscopes which are sold separately, to the manufacture primarily of complete instrumentation systems for navigation, guidance, check-out etc. The major impact of this change has been on the classification of products and, consequently, the SIC coding of these large establishments. This change in reporting was brought to light by the initiation, by the Census Bureau, of detailed commodity surveys in the fields of electronic products and instrumentation. The electronic and associated products report (MA-36N) was started covering the year 1961 and the instruments series (MA-38B) was broadened for 1963 to encompass most types of instruments following an introductory report for 1961 and 1962 covering industrial process instruments and test and measuring equipment. Annual statistics from both reports are published in the Current Industrial Reports Series.

In both the 1958 Census of Manufactures and the Annual Survey of Manufactures from 1959 through 1962, the classification of systems was not sufficiently spelled out in the product inquiries of these programs, especially at the 5-digit product class level. However, with the introduction, in the MA-36N and MA-38B surveys, of detailed 7-digit product information which itself is used to build up to broader 5-digit product class totals, these totals, although they should be the same as those reported on Form MA-100 (Annual Survey of Manufactures), have differed. The respondents affected have identified the proportion of earlier years' output which consisted of systems rather than instruments as such, which was the manner in which the items were originally reported.

In view of the above, the annual data for 1958-1962 have been revised. Because of the shift in recent years from instruments which are classified in industry 3811 to complete systems which are classified in industry 3662, the year-to-year changes are of dubious validity for the industries considered separately. The two industries taken in combination however, would yield significant measures of activity in the general area.

[1]The figures for 1939 through 1967 include data for employees of manufacturing establishments who are engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known.

[2]For the period 1954 to 1963, figures represent adjusted value added by manufacture and for earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year, without adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. See Introduction, "Value Added by Manufacture."

[3]The total value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry classification. For a more complete explanation, see Introduction.

[4]The figures for 1958 to 1967 include expenditures for plants under construction and not yet in operation.

[5]The figures for 1947, 1954, and later years include establishments primarily engaged in the manufacture of automatic temperature controls.

[6]In addition to data for operating establishments, figures for employment and payroll for manufacturing central administrative offices and auxiliary units are shown for the years 1949 to 1953 in the annual survey of manufacturing volumes. Data for these units are not available for the years 1955 to 1957, 1959 to 1962, 1964 to 1966, or prior to 1949.

[7]Figures for 1958 to 1963 for operating manufacturing establishments are not strictly comparable with prior years due to revisions of the Standard Industrial Classification System. Prior to 1958, data for the following commodities were excluded: laboratory precision balances; laboratory furniture; revolution counters; operating room and other hospital furniture; surgical corsets; and hearing aids. Establishments primarily engaged in the manufacture of sanitary napkins and tampons are included prior to 1958.

[8]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

[9]The figures for 1939 and later years are not strictly comparable with those for earlier years. Statistics for 1939 and later years (a) include data for establishments primarily engaged in manufacture of thermostats and gauges, and (b) exclude data for establishments primarily engaged in the manufacture of time-recording stamps and machines. Value added by manufacture for 1939 on a basis strictly comparable with 1937 was $314.1 million.

[10]The figures for 1937 to 1954 include, whereas those for earlier years exclude, data for establishments primarily engaged in the manufacture of certain mechanical measuring instruments. Value added by manufacture for 1937, excluding data for these establishments and on a basis comparable with 1935, was $294.5 million.

[11]The figures for 1935 to 1954 include, whereas those for 1933 and earlier years exclude, data for establishments primarily engaged in manufacture of certain dental equipment and supplies (chairs, cabinets, and electrical devices).

[12]The figures for 1929 to 1954 exclude, whereas those for earlier years include, data for establishments primarily engaged in manufacture of gas machines. Value added by manufacture for 1929, including data for these establishments and on a basis comparable with 1927, was $306.3 million.

[13]The figures for 1927 to 1954 exclude, whereas those for earlier years include, data for dental laboratories operating on a custom basis. Value added by manufacture for 1927 including data for these laboratories and on a basis comparable with 1925, was $280.3 million.

[14]The figures for 1899 to 1923 include, whereas those for later years exclude, data for establishments primarily engaged in grinding lenses for spectacles and eyeglasses to individual prescription.

[15]The figures for 1899 to 1909 exclude, whereas those for 1914 and later years include, data for establishments primarily engaged in manufacture of motion-picture machines. Value added by manufacture for 1914, excluding data for such establishments, was $96.4 million.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: -Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]The value of shipments and cost of materials for industry groups (2- and 3-digit) includes extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

INSTRUMENTS; SURGICAL, DENTAL, AND OPHTHALMIC EQUIPMENT AND SUPPLIES

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3811--Engineering, Laboratory, and Scientific and Research Instruments and Associated Equipment
3821--Mechanical Measuring and Controlling Instruments, Except Automatic Temperature Controls
3822--Automatic Temperature Controls
3831--Optical Instruments and Lenses
3841--Surgical and Medical Instruments and Apparatus
3842--Orthopedic, Prosthetic, and Surgical Appliances and Supplies
3843--Dental Equipment and Supplies
3851--Ophthalmic Goods

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries

3811--ENGINEERING, LABORATORY, AND SCIENTIFIC AND RESEARCH INSTRUMENTS AND ASSOCIATED EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing laboratory, scientific, and engineering instruments such as nautical, navigational, aeronautical, surveying, drafting, and instruments for laboratory work and scientific research (except optical instruments--industry 3831). Establishments primarily engaged in manufacturing surgical and medical instruments are classified in industry 3841; dental instruments and equipment in industry 3843; mechanical measuring and controlling instruments in industry 3821; machinists' precision measuring tools in industry 3545; instruments for indicating, measuring, and recording electrical quantities and characteristics in industry 3611; watches and clocks in industry 3871; and measuring and dispensing pumps in industry 3586. For a detailed list of products of industry 3811, refer to table 6A, product codes 3811101 to 3811389.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Values of shipments and other receipts of the Engineering and Scientific Instruments Industry in 1967 totaled $1,001 million. This included shipments of engineering and

scientific instruments (primary products), valued at $781 million, shipments of other products (secondary products) valued at $104 million, and miscellaneous receipts (mainly products bought and resold) of $116 million.

This industry's shipments of engineering and scientific instruments (primary products) in 1967 represented 88 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 84 percent. Secondary products shipped by this industry in 1967 included mechanical measuring devices ($40 million).

Industry 3811 shipments of engineering and scientific instruments (primary products) in 1967 represented 73 percent (coverage ratio) of these products valued at $1,076 million shipped by all industries. In 1963, the coverage ratio was 56 percent. Other industries shipping engineering and scientific instruments (primary products) consisted mainly of industry 3662, Radio and TV Communication Equipment, $144 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3811, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

3821--MECHANICAL MEASURING AND CONTROLLING INSTRUMENTS, EXCEPT AUTOMATIC TEMPERATURE CONTROLS

This industry comprises establishments primarily engaged in manufacturing industrial process instruments, for indicating, recording, measuring and controlling temperature (except automatic temperature controls industry 3822), pressure and vacuum, fluid flow and liquid level, mechanical motion, rotation, humidity, density, acidity, alkalinity, and combustion; dial pressure gauges; physical property testing apparatus such as hardness, tension, compression, torsion, ductility, and elasticity testing apparatus. For a detailed list of products of industry 3821, refer to table 6A, product codes 3821145 to 3821671.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Mechanical Measuring Devices Industry in 1967 totaled $1,455 million. This included shipments of mechanical measuring devices (primary products), valued at $1,124 million, shipments of other products (secondary products) valued at $184 million, and miscellaneous receipts of $147 million.

This industry's shipments of mechanical measuring devices (primary products) in 1967 represented 86 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 80 percent. Secondary products shipped by this industry in 1967 included electric measuring instruments ($38 million) and engineering and scientific instruments ($23 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 59 percent of the total industry shipments are represented by plants specializing in product class 38213, industrial process instruments.

Industry 3821 shipments of mechanical measuring devices (primary products) in 1967 represented 82 percent (coverage ratio) of these products valued at $1,369 million shipped by all industries. In 1963, the coverage ratio was 83 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3821, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

3822--AUTOMATIC TEMPERATURE CONTROLS

This industry comprises establishments primarily engaged in manufacturing automatic temperature controls activated by pressure, temperature, level, flow, time, or humidity (including pneumatic controls) of the type principally used as components of air conditioning, refrigeration, and comfort heating, or as components of household appliances. Establishments primarily engaged in manufacturing industrial electric controls are classified in industry 3622. For a detailed list of products of industry 3822, refer to table 6A, product codes 3822012 to 3822018.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Automatic Temperature Controls Industry in 1967 totaled $618 million. This included shipments of automatic temperature controls (primary products), valued at $476 million, shipments of other products (secondary products) valued at $110 million, and miscellaneous receipts (mainly products bought and resold) of $32 million.

This industry's shipments of automatic temperature controls (primary products) in 1967 represented 81 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 82 percent.

Industry 3822 shipments of automatic temperature controls (primary products) in 1967 represented 91 percent (coverage ratio) of these products valued at $524 million shipped by all industries. In 1963, the coverage ratio was 95 percent. Other industries shipping automatic temperature controls (primary products) consisted mainly of industry 3622, Industrial Controls, $14 million; and industry 3821, Mechanical Measuring Devices, $14 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3822, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

3831--OPTICAL INSTRUMENTS AND LENSES

This industry comprises establishments primarily engaged in the production of optical lenses and prisms, and in manufacturing optical instruments such as microscopes, telescopes, field and opera glasses; and optical measuring and testing instruments such as refractometers, spectrometers, spectroscopes, colorimeters, polariscopes. Establishments primarily engaged in manufacturing eyeglass lenses, frames, or fittings are classified in industry 3851; and those engaged in manufacturing sighting and fire control instruments, but not engaged in manufacturing optical components, in industry 1941. For a detailed list of products of industry 3831, refer to table 6A, product codes 3831131 to 3831262.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Optical Instruments and Lenses Industry in 1967 totaled $407 million. This included shipments of optical instruments and lenses (primary products), valued at $336 million, shipments of other products (secondary products) valued at $49 million, and miscellaneous receipts (mainly products bought and resold) of $22 million.

This industry's shipments of optical instruments and lenses (primary products) in 1967 represented 87 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 90 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 81 percent of the total industry shipments are represented by plants specializing in product class 38311, Optical instruments and lenses.

Industry 3831 shipments of optical instruments and lenses (primary products) in 1967 represented 74 percent (coverage ratio) of these products valued at $452 million shipped by all industries. In 1963, the coverage ratio was 61 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3831, these establishments accounted for less than 1 percent of payroll and 1 percent of value added by manufacture.

3841--SURGICAL AND MEDICAL INSTRUMENTS AND APPARATUS

This industry comprises establishments primarily engaged in manufacturing medical, surgical, ophthalmic, and veterinary instruments and apparatus. Establishments primarily engaged in manufacturing surgical and orthopedic appliances are classified in industry 3842; and electrotherapeutic, electromedical, and X-ray apparatus in industry 3693. For a detailed list of products of industry 3841, refer to table 6A, product codes 3841012 to 3841096.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Surgical and Medical Instruments Industry in 1967 totaled $475 million. This included shipments of surgical and medical instruments (primary products), valued at $375 million, shipments of other products (secondary products) valued at $38 million, and miscellaneous receipts (mainly products bought and resold) of $62 million.

This industry's shipments of surgical and medical instruments (primary products) in 1967 represented 91 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 88 percent. Secondary products shipped by this industry in 1967 included surgical appliances and supplies ($9 million).

Industry 3841 shipments of surgical and medical instruments (primary products) in 1967 represented 69 percent (coverage ratio) of these products valued at $543 million shipped by all industries. In 1963, the coverage ratio was 74 percent. Other industries shipping surgical and medical instruments (primary products) included industry 2834, Pharmaceutical Preparations, $59 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3841, these establishments accounted for 1 percent of payroll and of value added by manufacture.

3842--ORTHOPEDIC, PROSTHETIC AND SURGICAL APPLIANCES AND SUPPLIES

This industry comprises establishments primarily engaged in manufacturing orthopedic, prosthetic, and surgical appliances and supplies, arch supports, and other foot appliances; fracture appliances, elastic hosiery, abdominal supporters, braces, and trusses; bandages; surgical gauze and dressings; sutures; adhesive tapes and medicated plasters; and personal safety appliances and equipment. Establishments primarily engaged in manufacturing surgical and medical instruments are classified in industry 3841. Estabments primarily engaged in manufacturing appliances and in the personal fitting to the individual prescription of a physician are classified in trade industries. For a detailed list of products of industry 3842, refer to table 6A, product codes 3842111 to 3842413.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Surgical Appliances and Supplies Industry in 1967 totaled $838 million. This included shipments of surgical appliances and supplies (primary products), valued at $594 million, shipments of other products (secondary products) valued at $150 million, and miscellaneous receipts (mainly products bought and resold) of $94 million.

This industry's shipments of surgical appliances and supplies (primary products) in 1967 represented 80 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was also 80 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 71 percent of the total industry shipments are represented by plants specializing in product class 38421, in surgical, orthopedic and prosthetic appliances and supplies; and 18 percent in 38423, personal industrial safety devices.

Industry 3842 shipments of surgical appliances and supplies (primary products) in 1967 represented 86 percent (coverage ratio) of these products valued at $691 million shipped by all industries. In 1963, the coverage ratio was 90 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3842, these establishments accounted for 2 percent of payroll and value added by manufacture.

3843--DENTAL EQUIPMENT AND SUPPLIES

This industry comprises establishments primarily engaged in manufacturing artificial teeth, dental metals, alloys and amalgams, and a wide variety of equipment, instruments, and supplies used by dentists, dental laboratories, and dental colleges. Dental laboratories constructing artificial dentures, bridges, inlays and other dental restorations on specifications from dentists are classified in industry 8072. For a detailed list of products of industry 3843, refer to table 6A, product codes 3843012 to 3843098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Dental Equipment and Supplies Industry in 1967 totaled $221 million. This included shipments of dental equipment and supplies (primary products), valued at $190 million, shipments of other products (secondary products) valued at $12 million, and miscellaneous receipts (mainly products bought and resold) of $18 million.

This industry's shipments of dental equipment and supplies (primary products) in 1967 represented 94 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was also 94 percent.

Industry 3843 shipments of dental equipment and supplies (primary products) in 1967 represented 94 percent (coverage ratio) of these products valued at $202 million shipped by all industries. In 1963, the coverage ratio was 92 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3843, these establishments accounted for 3 percent of payroll and value added by manufacture.

3851--OPHTHALMIC GOODS

This industry comprises establishments primarily engaged in manufacturing ophthalmic frames, lenses, and sunglass lenses. Establishments primarily engaged in manufacturing slit lamps are classified in industry 3841, and molded glass blanks in industry 3229. Establishments primarily engaged in grinding lenses and fitting glasses to prescription are classified in trade. For a detailed list of products of industry 3851, refer to table 6A, product codes 3851112 to 3851398.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Ophthalmic Goods Industry in 1967 totaled $426 million. This included shipments of ophthalmic goods (primary products), valued at $360 million, shipments of other products (secondary products) valued at $51 million, and miscellaneous receipts (mainly products bought and resold) of $15 million.

This industry's shipments of ophthalmic goods (primary products) in 1967 represented 88 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 86 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8.

Industry 3851 shipments of ophthalmic goods (primary products) in 1967 represented 95 percent (coverage ratio) of these products valued at $378 million shipped by all industries. In 1963, the coverage ratio was 92 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3851, these establishments accounted for 2 percent of payroll and value added by manufacture.

Note: In 1967, 1963, and 1958, the number of companies in industry 3811 was 642, 571, and 539, respectively; in industry 3821: 605, 510, and 586; industry 3822: 88, 89, and 71; industry 3831: 287, 272, and 222; industry 3841: 298, 256, and 226; industry 3842: 755, 525, and 553; industry 3843: 314, 267, and 240; industry 3851: 432, 211 and 226. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors of the 1966/1965 relatives for employment and value added, for each industry, were as follows: Industry 3811, 5 and 2; industry 3821, 1 and 1; industry 3822, 1 and 1; industry 3831, 1 and 1; industry 3841, 3 and 3; industry 3842, 9 and 5; industry 3843, 1 and 2; and industry 3851, 1 and 1.

[2]Data prior to 1958 appear in Volume II 1963 Census of Manufactures, in table 1 of the chapter devoted to the industry.

[3]For 1967, a sizeable number of small establishments (typically under 10 employees) may have been misclassified in this industry because of the use of administrative records. Although this has a significant effect on the number of establishments for this industry, it has a small effect on the statistics, i.e. number of employees, salaries and wages, value added, etc. It is estimated that the effect on these principal statistics is less than 2 percent.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

[2]Includes an unspecified amount for plants under construction but not in operation.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

38510 02	Ophthalmic goods, n.s.k. (Represents principally establishments with fewer than 10 employees in 1967. See Note.)	.....	(X)	8.5		

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. r Revised.

[1]The major difference between these two figures concerns the method of reporting parts and components for aircraft, flight, nautical and navigational instruments and automatic pilots. Whereas many respondents have included such items under the broad heading in the census, parts are not covered in the MA-38B survey.

[2]Total may not agree with the sum of the detail due to independent rounding.

[3]Included with 38111 20 to avoid disclosing figures for individual companies.

[4]Included with 38111 98 to avoid disclosing figures for individual companies.

[5]Included with codes 38213 95 and 38213 97 in 1963.

[6]Most of the difference between these figures is due to a difference in emphasis placed on the products composing this product class. The product class title in the annual form MA38B emphasizes the nuclear radiation detection instruments, whereas the product class title in the Census of Manufactures gives, greater emphasis to the miscellaneous character of the product class. The major portion of the consequent reporting differences therefore relates to product code 38216 51, "other mechanical measuring instruments."

[7]Included with 38216 27 to avoid disclosing figures for individual companies.

[8]Included with 38311 80 to avoid disclosing figures for individual companies.

[9]Included with 38311 79 to avoid disclosing figures for individual companies.

[10]Data for plastic lenses (product code 38512 21) and contact lenses (product code 38512 23) were not collected separately in 1963 and are therefore included with single vision lenses (product code 38512 31) and multifocal lenses (product codes 38512 41 and 38512 43).

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0.....	AA	$10.0 to $20.0.....	EE
$2.0 to $5.0.....	BB	$20.0 to $50.0.....	FF

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at the individual product level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

[2]The 1954 value of shipments does not include a total for product code 3811000, scientific instruments, n.s.k., estimated at less than $3 million.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]From 10 to 30 percent of this figure was estimated.

[1]For 1963, material codes 331013 and 331017 are combined with code 331019 to avoid disclosing the operations of individual companies.

[2]No data are available for the quantities of castings, fractional horsepower electric motors, electron tubes or solid state semiconductors produced and consumed in the same establishment.

[3]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967, this includes estimates for companies that were not mailed report forms.

[4]Includes the cost of those materials for which the symbol "D" appears.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization--the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization--the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

PHOTOGRAPHIC EQUIPMENT; CLOCKS, WATCHES, AND WATCHCASES

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3861--Photographic Equipment and Supplies
3871--Watches, Clocks, Clockwork Operated Devices, and Parts Except Watchcases
3872--Watchcases

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3861--PHOTOGRAPHIC EQUIPMENT AND SUPPLIES

This industry comprises establishments primarily engaged in manufacturing (1) photographic apparatus, equipment, parts, attachments, and accessories, such as still and motion picture cameras and projection apparatus; photocopy and microfilm equipment; blueprinting and diazotype (white printing) apparatus and equipment; and other photographic equipment; and (2) sensitized film, paper, cloth, and plates, and prepared photographic chemicals for use therewith. Establishments primarily engaged in manufacturing photographic paper stock (unsensitized), and paper mats, mounts, easels and folders for photographic use are classified in Major Group 26; photographic lenses in industry 3831; photographic glass in Major Group 32; chemicals for technical purposes, not specifically prepared and packaged for use in photography, in Major Group 28; and photographic flash, flood enlarger and projection lamps in industry 3641. For a detailed list of products of industry 3861, refer to table 6A, product codes 3861111 to 3861811.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Photographic Equipment and Supplies Industry in 1967 totaled $3,664 million. This included shipments of photographic equipment and supplies (primary products), valued at $3,048 million, shipments of other products (secondary products) valued at $145 million, and miscellaneous receipts (mainly products bought and resold without further manufacture) of $471 million.

This industry's shipments of photographic equipment and supplies (primary products) in 1967 represented 95 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was also 95 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8.

Approximately 40 percent of the total industry shipments are represented by plants specializing in product class 38615, photographic sensitized film and plates; and 25 percent in 38611, Still picture equipment.

Industry 3861 shipments of photographic equipment and supplies (primary products) in 1967 represented 97 percent (coverage ratio) of these products valued at $3,138 million shipped by all industries. In 1963, the coverage ratio was also 97 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3861, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

3871--WATCHES, CLOCKS, CLOCKWORK OPERATED DEVICES, AND PARTS EXCEPT WATCHCASES

This industry comprises establishments primarily engaged in manufacturing clocks (including electric), watches, mechanisms for clockwork operated devices, and clock and watch parts. This industry includes establishments primarily engaged in assembling clocks and watches from purchased movements and cases. Establishments primarily engaged in manufacturing watchcases are classified in industry 3872, glass crystals in industry 3231, and unbreakable crystals in industry 3079. For a detailed list of products of industry 3871, refer to table 6A, product codes 3871111 to 3871589.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Watches and Clocks Industry in 1967 totaled $746 million. This included shipments of watches and clocks (primary products), valued at $599 million, shipments of other products (secondary products) valued at $108 million, and miscellaneous receipts of $39 million.

This industry's shipments of watches and clocks (primary products) in 1967 represented 85 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 82 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 47 percent of the total industry shipments are represented by plants specializing in product class 38711, Clocks; and 30 percent in 38714, Watches with imported movements.

Industry 3871 shipments of watches and clocks (primary products) in 1967 represented 90 percent (coverage ratio) of these products valued at $664 million shipped by all industries. In 1963, the coverage ratio was 95 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3871, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

3872--WATCHCASES

This industry comprises establishments primarily engaged in manufacturing watchcases. For a detailed list of products of industry 3872, refer to table 6A, product codes 3872011 to 3872065.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Watchcases Industry in 1967 totaled $56 million. This included shipments of watchcases (primary products), valued at $43 million, shipments of other products (secondary products) valued at $12 million, and miscellaneous receipts of $1 million.

This industry's shipments of watchcases (primary products) in 1967 represented 78 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 86 percent.

Industry 3872 shipments of watchcases (primary products) in 1967 represented 96 percent (coverage ratio) of these products valued at $45 million shipped by all industries. In 1963, the coverage ratio was 97 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3872, these establishments accounted for less than 1 percent of payroll and 1 percent of value added by manufacture

Note: In 1967, 1963, and 1958, the number of companies in industry 3861 was 505, 499, and 450, respectively; in industry 3871: 153, 150, and 153; industry 3872: 45, 51, and 58. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to aboid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistence review. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures in table 1 of the chapter devoted to this industry.

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

Footnotes for table 6A-38B--Continued

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e] From 10 to 30 percent of this figure was estimated.

[1]Value includes stands and attachments shipped with process cameras.

[2]Quantity figures include heads shipped separately, as well as complete units. Value figures include the value of heads shipped separately, stands shipped seperately and complete units shipped.

[3]The number of units shipped, including leased machines, totaled 370.0 thousand in 1967. and 264.9 thousand in 1963. The value shown includes for some companies rental receipts rather than the value of machines produced during the year.

[4]Product code 38613 07 has been combined with product code 38613 27and product code 38613 15 has been combined with product codes 38613 42 and 38613 44 to avoid disclosing figures for individual companies.

[5]Represents total square feet of sensitized material (in millions).

[6]Includes an indeterminate amount of duplication resulting from shipments of film producers for further manufacturing process.

[7]Motion picture film, amateur roll film and other film wire combined to avoid disclosing operations of individual companies. Motion picture film was reported in linear feet by width and has been converted to TSFSM. Amateur roll film and other film were collected in TSFSM. In 1967, the statistics published for product code 38615 99 were collected seperately as codes 38615 05, 38615 13, 38615 15, 38615 21, 38615 23, 38615 25, 38615 31, 38615 33, 38615 35, 38615 51, 38615 53, 38615 55, 38615 61, 38615 62, 38615 63, 38615 64, 38615 65, 38615 66, 38615 67, 38615 68, 38615 69, 38615 71, 38615 75, and 38615 77.

[8]Includes the following figures which were not separately published in 1967:

Item	Quantity TSFSM (millions)	Value (million dollars)
Sheet film and pack film and long lengths of still picture roll film other than graphic arts film (including rolls more than 25 ft. in length and more than 30 mm. in width).....	43.4	32.9
Graphic arts film (for lithography, rotogravure, photo-engraving and screen processing and printing).....	186.8	63.0
Photographic glass plates and slides.....	1.9	4.2

[9]Represents total square yards of sensitized materials (in millions).

[10]Battery powered clocks included with other complete clocks (product code 38711 35) for 1963,

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at the individual product level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

[2]For 1966 and previous years (except 1963) these figures are included with product class 38612, "Photocopying Equipment."

[1]Included with material code 970099, "All other materials and components, etc." to avoid disclosing figures for individual companies.

[2]No data are available for the quantities of aluminum and aluminum-base alloy castings, fractional horsepower electric motors, electron tubes, or solid state semiconductors produced and consumed in the same establishment.

[3]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967, this includes estimates for companies that were not mailed report forms.

[4]No data are available for quantities of fractional horsepower electric motors or watchcases produced and consumed in the same establishment.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization–the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization–the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Miscellaneous Manufacturing Industries

39A Jewelry, silverware, and plated ware

39B Musical instruments and parts; toys and sporting goods

39C Office supplies, costume jewelry, and notions

39D Miscellaneous manufactures

Major Group 39 covers establishments primarily engaged in manufacturing products not classified in any other major manufacturing group. Industries in this group fall into the following categories: Jewelry, and silverware and plated ware; musical instruments; toys, and sporting and athletic goods; pens, pencils, and other office and artists' materials; buttons, costume novelties, and miscellaneous notions; brooms and brushes; morticians' goods; and, other miscellaneous manufacturing industries.

For 1953 and earlier years, data for Major Group 19, Ordnance and Accessories, are included with Major Group 39 in table 1.

For 1954 and subsequent years Major Group 19 data are published separately. However, in some tables within these volumes, data for Major Group 19 are given both separately and combined with Major Group 39.

Major Group 19 covers establishments primarily engaged in manufacturing artillery, small arms, and related equipment; ammunition; tanks and specialized tank parts; sighting and fire control equipment; complete guided missiles and research and development on complete guided missiles and, miscellaneous ordnance and accessories, not elsewhere classified.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.

[1]The figures for 1939 through 1967 include data for employees of manufacturing establishments who were engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known.

[2]For the period 1954 to 1967, figures represent adjusted value added by manufacture and for earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year, without adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year.

[3]The total value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry classification. For more information, see Introduction.

[4]The figures for 1958 to 1967 include expenditures for plants under construction and not yet in operation.

[5]In addition to data for operating establishments, figures for employment and payroll for manufacturing central administrative office and auxiliary units are included in industry group 39 for groups 39 and 19 for the years 1949 to 1953 in the annual survey of manufactures volumes. Data for these units are not available for the years 1955 to 1957, 1959 to 1962, and prior to 1949.

[6]Figures for 1958 to 1967 for operating manufacturing establishments are not strictly comparable with prior years due to revisions of the Standard Industrial Classification System. Prior to 1958, establishments primarily engaged in the manufacture of plastics products, n.e.c., cork products, soda-fountain and bar equipment, and jewelry, instrument and musical instrument cases, were included in these data. Establishments primarily engaged in the manufacture of linoleum and other hard surface floor covering, n.e.c., are excluded in data prior to 1958.

[7]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

[8]In 1954 and 1967, data for administrative and auxiliary establishments for Major Group 19, "Ordnance and Accessories," are included with Major Group 39, "Miscellaneous Manufactures."

[9]For 1953 and earlier years data includes ordnance and accessories.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]The value of shipments and cost of materials for industry groups (2- and 3-digit) includes extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

JEWELRY, SILVERWARE, AND PLATED WARE

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3911--Jewelry, Precious Metal
3912--Jewelers' Findings and Materials
3913--Lapidary Work
3914--Silverware Plated Ware, and Stainless Steel Ware

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3911--JEWELRY, PRECIOUS METAL

This industry comprises establishments primarily engaged in manufacturing jewelry and other articles worn on or carried about the person, made of precious metals with or without stones (including the setting of stones where used), including cigarette cases and lighters, vanity cases and compacts; trimmings for umbrellas and canes; and jewel settings and mountings. Establishments primarily engaged in manufacturing costume jewelry from nonprecious metals and other materials are classified in industry 3961. For a detailed list of products of industry 3911, refer to table 6A, product codes 3911112 to 3911298.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Jewelry, Precious Metal, Industry in 1967 totaled $742 million. This included shipments of jewelry, precious metal (primary products), valued at $609 million, shipments of other products (secondary products) valued at $63 million, and miscellaneous receipts (mainly resales) of $70 million.

This industry's shipments of jewelry, precious metal (primary products) in 1967 represented 91 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 92 percent. Secondary products shipped by this industry in 1967 included costume jewelry (SIC 3961) ($24 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 87 percent of the total industry shipments are represented by plants specializing in product classes, 69 percent in jewelry made of platinum metals or carat gold.

Industry 3911 shipments of jewelry, precious metal (primary products) in 1967 represented 96 percent (coverage ratio) of these products valued at $633 million shipped by all industries. In 1963, the coverage ratio was 97 percent. Other industries shipping Jewelry, Precious Metal (primary products) included Industry 3961, Costume Jewelry, $9 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3911, these establishments accounted for 4 percent of payroll and 6 percent of value added by manufacture.

3912--JEWELERS' FINDINGS AND MATERIALS

This industry comprises establishments primarily engaged in manufacturing unassembled jewelry parts, and stock shop products such as sheet, wire, and tubing. Establishments primarily engaged in lapidary work are classified in industry 3913. For a detailed list of products of industry 3912, refer to table 6A, product codes 3912013 to 3912051.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Jewelers' Findings and Materials Industry in 1967 totaled $129 million. This included shipments of jewelers' findings and materials (primary products), valued at $109 million, shipments of other products (secondary products) valued at $12 million, and miscellaneous receipts (mainly contract work on materials owned by others) and resales of $8 million.

This industry's shipments of jewelers' findings and materials (primary products) in 1967 represented 90 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 92 percent.

Industry 3912 shipments of jewelers' findings and materials (primary products) in 1967 represented 94 percent (coverage ratio) of these products valued at $116 million shipped by all industries. In 1963, the coverage ratio was 89 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3912, these establishments accounted for 4 percent of payroll and 6 percent of value added by manufacture.

3913--LAPIDARY WORK

This industry comprises establishments primarily engaged in cutting, slabbing, tumbling, carving, engraving, polishing, or faceting stones from natural or manmade precious or semiprecious gem raw materials, either for sale or on a contract basis for the trade; in recutting, repolishing and setting gem stones; or in cutting, drilling, and otherwise

preparing jewels for instruments, dies, watches, chronometers, and other industrial uses. This industry includes the drilling, sawing, and peeling of real or cultured pearls, but does not include the manufacture of artificial pearls (industry 3961). For a detailed list of products of industry 3913, refer to table 6A, product codes 3913011 to 3913031.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Lapidary Work Industry in 1967 totaled $89 million. This included shipments of lapidary work (primary products), valued at $76 million, shipments of other products (secondary products) valued at $4 million, and miscellaneous receipts (mainly resales) of $9 million.

This industry's shipments of lapidary work (primary products) in 1967 represented 95 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 93 percent.

Industry 3913 shipments of lapidary work (primary products) in 1967 represented 78 percent (coverage ratio) of these products valued at $98 million shipped by all industries. In 1963, the coverage ratio was 81 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3913, these establishments accounted for 16 percent of payroll and 20 percent of value added by manufacture.

3914--SILVERWARE, PLATED WARE, AND STAINLESS STEEL WARE

This industry comprises establishments primarily engaged in manufacturing flatware (including knives, forks, and spoons), hollowware, toiletware, ecclesiastical ware, and related products made of sterling silver; of metal plated with silver, gold, or other metal; of nickel silver; of pewter; or of stainless steel. For a detailed list of products of industry 3914, refer to table 6A, product codes 3914111 to 3914261.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Silverware and Plated Ware Industry in 1967 totaled $339 million. This included shipments of silverware and plated ware (primary products), valued at $303 million, shipments of other products (secondary products) valued at $15 million, and miscellaneous receipts (mainly resales) of $21 million.

This industry's shipments of silverware and plated ware (primary products) in 1967 represented 95 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was also 95 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 96 percent of the total industry shipments are represented by plants specializing in product classes; 66 percent in flatware.

Industry 3914 shipments of silverware and plated ware (primary products) in 1967 represented 99 percent (coverage ratio) of these products valued at $305 million shipped by all industries. In 1963, the coverage ratio was 98 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3914, these establishments accounted for 1 percent of payroll and 1 percent of value added by manufacture.

Note: In 1967, 1963, and 1958, the number of companies in industry 3911 was 1,477, 1,428, and 1,300, respectively; in industry 3912: 232, 228, and 248; industry 3913: 296, 318, and 326; industry 3914: 186, 201, and 198. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: (NA) Not available. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. (*) These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

[3]Production workers for this industry may be overstated by 3 to 5 percent. This resulted from an overestimation for the administrative record class of establishments by as much as 20 percent due to an error in the imputation process. Other data were not affected.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands rather than rounding in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]Production workers for this industry may be overstated by 3 to 5 percent. This resulted from an overestimation for the administrative record class of establishments by as much as 20 percent due to an error in the imputation process. Other data were not affected.

[3]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. [e]Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees.) - Represents zero.

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

[2]Production workers for this industry may be overstated by 3 to 5 percent. This resulted from an overestimation for adminstrative record class of establishments by as much as 20 percent due to an error in the imputation process. Other data were not affected.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Under $50 thousand.

[1] Includes lapidary work done on materials owned by others for which type of stone was not reported.

[2] Identified as "hotel patterns" in the 1963 Census of Manufactures.

[3] Identified as "commercial patterns" in the 1963 Census of Manufactures.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands rather than rounding in computer operations.

No materials consumed data were collected for industries 3911, 3912, or 3913.

Standard notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (X) Not applicable. (NA) Not available. (Z) Under $50 thousand.

[1]No data are available for the quantities of castings produced and consumed in the same establishment.

[2]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967, this included estimates for companies that were not mailed report forms.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization–the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization–the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

MUSICAL INSTRUMENTS AND PARTS; TOYS AND SPORTING GOODS

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3931--Musical Instruments and Parts
3941--Games and Toys, Except Dolls and Children's Vehicles
3942--Dolls
3943--Children's Vehicles, Except Bicycles
3949--Sporting and Athletic Goods, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3931--MUSICAL INSTRUMENTS AND PARTS

This industry comprises establishments primarily engaged in manufacturing pianos, with or without player attachments; organs; other musical instruments; and parts and materials for musical instruments. For a detailed list of products of industry 3931, refer to table 6A, product codes 3931111 to 3931498.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Musical Instruments and Parts Industry in 1967 totaled $434 million. This included shipments of musical instruments and parts (primary products), valued at $392 million, shipments of other products (secondary products) valued at $13 million, and miscellaneous receipts (mainly resales) of $29 million.

This industry's shipments of musical instruments and parts (primary products) in 1967 represented 97 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was also 97 percent. Secondary products shipped by this industry in 1967 consisted mainly of radio and TV receiving sets ($11 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 33 percent of the total industry shipments are represented by plants specializing in product class 39312, organs.

Industry 3931 shipments of musical instruments and parts (primary products) in 1967 represented 98 percent (coverage ratio) of these products valued at $401 million shipped by all industries. In 1963, the coverage ratio was 92 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3931, these establishments accounted for 1 percent of payroll and of 1 percent of value added by manufacture.

3941--GAMES AND TOYS, EXCEPT DOLLS AND CHILDREN'S VEHICLES

This industry comprises establishments primarily engaged in manufacturing indoor games and game sets for adults and children, and mechanical and nonmechanical toys. Important products of this industry include games such as chess, checkers, dominoes, puzzles, and other indoor games; and toys, such as toy furniture, doll carriages and carts, construction sets, mechanical trains, toy guns and air rifles, and other mechanical games and toys. Establishments primarily engaged in manufacturing dolls are classified in industry 3942; children's outdoor wheel goods and vehicles, except bicycles, in industry 3943; and sporting and athletic goods for children and adults in industry 3949. For a detailed list of products of industry 3941, refer to table 6A, product codes 3941011 to 3941096.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Games and Toys Industry in 1967 totaled $1,113 million. This included shipments of games and toys (primary products), valued at $908 million, shipments of other products (secondary products) valued at $127 million, and miscellaneous receipts (mainly resales) of $78 million.

This industry's shipments of games and toys (primary products) in 1967 represented 88 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 92 percent. Secondary products shipped by this industry in 1967 included dolls ($62 million).

Industry 3941 shipments of games and toys (primary products) in 1967 represented 96 percent (coverage ratio) of these products valued at $949 million shipped by all industries. In 1963, the coverage ratio was 91 percent. Other industries shipping games and toys (primary products) included industry 3079, Miscellaneous Plastics Products, $14 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3941, these establishments accounted for 1 percent of payroll and of 1 percent of value added by manufacture.

3942--DOLLS

This industry comprises establishments primarily engaged in manufacturing dolls, doll parts, and doll clothing. Establishments primarily engaged in manufacturing stuffed toy animals are also included in this industry. For a detailed list of products of industry 3942, refer to table 6A, product codes 3942006 to 3942055.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Dolls Industry in 1967 totaled $163 million. This included shipments of dolls (primary products), valued at $153 million, shipments of other products (secondary products)valued at less than $1 million,and miscellaneous receipts (mainly resales) of $10 million.

This industry's shipments of dolls (primary products) in 1967 represented 99+ percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 80-85 percent.

Industry 3942 shipments of dolls (primary products) in 1967 represented 70 percent (coverage ratio) of these products valued at $217 million shipped by all industries. In 1963, the coverage ratio was 87 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3942, these establishments accounted for 3 percent of payroll and of 4 percent of value added by manufacture.

3943--CHILDREN'S VEHICLES, EXCEPT BICYCLES

This industry comprises establishments primarily engaged in manufacturing baby carriages, strollers, and gocarts; children's velocipedes and tricycles, coaster wagons, play cars, sleds, and other children's outdoor wheel goods,and vehicles, except bicycles (industry 3751). For a detailed list of products of industry 3943, refer to table 6A, product codes 3943011 to 3943098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Children's Vehicles, Except Bicycles, Industry in 1967 totaled $79 million. This included shipments of children's vehicles, except bicycles (primary products), valued at $61 million, shipments of other products (secondary products) valued at $14 million, and miscellaneous receipts (mainly resales) of $4 million.

This industry's shipments of children's vehicles, except bicycles (primary products) in 1967 represented 81 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 71 percent. Secondary products shipped by this industry in 1967 included metal household furniture ($6 million).

Industry 3943 shipments of children's vehicles, except bicycles (primary products) in 1967 represented 61 percent (coverage ratio) of these products valued at $100 million shipped by all industries. In 1963, the coverage ratio was 65 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3943, these establishments accounted for 1 percent of payroll and of 1 percent of value added by manufacture.

3949--SPORTING AND ATHLETIC GOODS, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing sporting and athletic goods, not elsewhere classified, such as fishing tackle; golf and tennis goods; baseball, football, basketball, and boxing equipment; roller skates and ice skates; gymnasium and playground equipment; billiard and pool tables; and bowling alleys and equipment. Establishments primarily engaged in manufacturing athletic apparel are classified in Major Group 23, small arms ammunition in industry 1961, and firearms in industry 1951. For a detailed list of products of industry 3949, refer to table 6A, product codes 3949114 to 3949398.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Sporting and Athletic Goods, N.E.C., Industry in 1967 totaled $853 million. This included shipments of sporting and athletic goods, n.e.c. (primary products), valued at $759 million, shipments of other products (secondary products) valued at $43 million, and miscellaneous receipts (mainly resales) of $52 million.

This industry's shipments of sporting and athletic goods, n.e.c. (primary products) in 1967 represented 95 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 93 percent. Secondary products shipped by this industry in 1967 included shoes, except rubber ($4 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 89 percent of the total industry shipments are represented by plants specializing in product classes; 57 percent in 39493; and 17 percent in 39492.

Industry 3949 shipments of sporting and athletic goods, n.e.c. (primary products) in 1967 represented 91 percent (coverage ratio) of these products valued at $836 million shipped by all industries. In 1963, the coverage ratio was also 91 percent. Other industries shipping sporting and athletic goods, n.e.c. (primary products) included industry 3069, Fabricated Rubber Products, N.E.C., $22 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3949, these establishments accounted for 3 percent of payroll and of 3 percent of value added by manufacture.

Note: In 1967, 1963, and 1958, the number of companies in industry 3931 was 304, 288, and 252, respectively; in industry 3941: 653, 767, and 832; industry 3942: 331, 404, and 482: industry 3943: 41, 60, and 56; industry 3949: 1,304, 1,361, and 1,169. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250 to 499 employees
CC - 500 to 999 employees
EE - 1,000 to 2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

Note: Detailed figures may not add to totals because of independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanations of terms, for discussion of items.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. [e] Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or more 50 employees.) -Represents zero.

[1] Report forms were not mailed to companies that operated only one establishments and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

[2] Includes an unspecified amount for plants under construction but not in operation.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments are included in the code ending with "002" which is further discussed in the text. Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 census of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.
[1]2,538 thousand units were shipped in 1963.
[2]Data for doll houses and furniture (3941015), and other handicraft and hobby kits (3941055) were included with other toys (3941087) in 1963.
[3]Data for children's wagons are included with product code 3943098 "other children's vehicles...." to avoid disclosing figures for individual companies.
[4]The 1966 total for this product class has been revised from $133.7 million to $113.7 million.
[5]1963 data for product code 3949200 is included with product code 3949300.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Note: See "Note" to table 6A for an explanation of "n.s.k." product class. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (D) Withheld to avoid disclosing figures for individual companies. (Z) Under 50 thousand (or under 50 employees).

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses in the value of shipments columns either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data.

[1] Represents the quantity of purchased electric energy and the killowatt-hours equivalent of all fuels used for heat and power.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization--the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization--the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

OFFICE SUPPLIES, COSTUME JEWELRY, AND NOTIONS

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3951--Pens, Pen Points, Fountain Pens, Ball Point Pens, Mechanical Pencils and Parts
3952--Lead Pencils, Crayons, and Artists' Materials
3953--Marking Devices
3955--Carbon Paper and Inked Ribbons
3961--Costume Jewelry and Costume Novelties, Except Precious Metal
3962--Feathers Plumes and Artificial Flowers
3963--Buttons
3964--Needles, Pins, Hooks and Eyes, and Similar Notions

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3951--PENS, PEN POINTS, FOUNTAIN PENS, BALL POINT PENS, MECHANICAL PENCILS AND PARTS

This industry comprises establishments primarily engaged in manufacturing pens, pen-points, fountain pens, ball point pens, refill cartridges, and parts for pens and mechanical pencils. For a detailed list of products of industry 3951, refer to table 6A, product codes 3951001 to 3951071.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Pens and Mechanical Pencils Industry in 1967 totaled $212 million. This included shipments of pens and mechanical pencils (primary products), valued at $193 million, shipments of other products (secondary products) valued at $15 million, and miscellaneous receipts of $4 million.

This industry's shipments of pens and mechanical pencils (primary products) in 1967 represented 93 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 90 percent.

Industry 3951 shipments of pens and mechanical pencils (primary products) in 1967 represented 92 percent (coverage ratio) of these products valued at $211 million shipped by all industries. In 1963, the coverage ratio was 93 percent. Other industries shipping

pens and mechanical pencils (primary products) included industry 3952, Lead Pencils and Art Goods, $8 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3951, these establishments accounted for 1 percent of payroll and 1 percent of value added by manufacture.

3952--LEAD PENCILS, CRAYONS, AND ARTISTS' MATERIALS

This industry comprises establishments primarily engaged in manufacturing lead pencils, pencil leads, and crayons; materials and equipment for art work, such as airbrushes, drawing tables and boards, palettes, sketch boxes, pantographs, artists' colors and waxes, pyrography goods, drawing inks, and drafting materials. Establishments primarily engaged in manufacturing mechanical pencils are classified in industry 3951, and drafting instruments in industry 3811. For a detailed list of products of industry 3952, refer to table 6A, product codes 3952111 to 3952211.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Lead Pencils and Art Goods Industry in 1967 totaled $159 million. This included shipments of lead pencils and art goods (primary products), valued at $124 million, shipments of other products (secondary products) valued at $22 million, and miscellaneous receipts (mainly resales) of $13 million.

This industry's shipments of lead pencils and art goods (primary products) in 1967 represented 85 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 87 percent. Secondary products shipped by this industry in 1967 included pens and mechanical pencils ($8 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 56 percent of the total industry shipments are represented by plants specializing in product class 39521, Lead pencils and crayons; and 34 percent in 39522, Artists' materials.

Industry 3952 shipments of lead pencils and art goods (primary products) in 1967 represented 93 percent (coverage ratio) of these products valued at $133 million shipped by all industries. In 1963, the coverage ratio was 90 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3952, these establishments accounted for 1 percent of payroll and 1 percent of value added by manufacture.

3953--MARKING DEVICES

This industry comprises establishments primarily engaged in manufacturing rubber and metal hand stamps, dies, and seals; steel letters and figures; and stencils for use in painting or marking. For a detailed list of products of industry 3953, refer to table 6A, product codes 3953013 to 3953098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Marking Devices Industry in 1967 totaled $146 million. This included shipments of marking devices (primary products), valued at $119 million, shipments of other products (secondary products) valued at $13 million, and miscellaneous receipts (mainly resales) of $14 million.

This industry's shipments of marking devices (primary products) in 1967 represented 90 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 84 percent.

Industry 3953 shipments of marking devices (primary products) in 1967 represented 91 percent (coverage ratio) of these products valued at $131 million shipped by all industries. In 1963, the coverage ratio was 90 percent. Other industries shipping marking devices (primary products) included industry 2752, Commercial Printing, Lithographic, $3 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3953, these establishments accounted for 6 percent of payroll and 9 percent of value added by manufacture.

3955--CARBON PAPER AND INKED RIBBONS

This industry comprises establishments primarily engaged in manufacturing carbon paper for business machines, sales books, etc.; spirit or gelatin process and other stencil paper; and inked ribbons for business machines. For a detailed list of products of industry 3955, refer to table 6A, product codes 3955012 to 3955098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Carbon Paper And Inked Ribbons Industry in 1967 totaled $207 million. This included shipments of carbon paper and inked ribbons (primary products), valued at $176 million, shipments of other products (secondary products) valued at $11 million, and miscellaneous receipts (mainly resales) of $20 million.

This industry's shipments of carbon paper and inked ribbons (primary products) in 1967 represented 94 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 95 percent.

Industry 3955 shipments of carbon paper and inked ribbons (primary products) in 1967 represented 79 percent (coverage ratio) of these products valued at $222 million shipped by all industries. In 1963, the coverage ratio was 83 percent. Other industries shipping carbon paper and inked ribbons (primary products) included industry 3579, Office Machines, N.E.C., $14 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3955, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

3961--COSTUME JEWELRY AND COSTUME NOVELTIES EXCEPT PRECIOUS METAL

This industry comprises establishments primarily engaged in manufacturing costume jewelry, costume novelties, and ornaments made of all materials, except precious metal, precious or semiprecious stones, and rolled gold plate and gold filled materials (industry 3911). For a detailed list of products of industry 3961, refer to table 6A, product codes 3961011 to 3961098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Costume Jewelry And Notions Industry in 1967 totaled $377 million. This included shipments of costume jewelry and notions (primary products), valued at $310 million, shipments of other products (secondary products) valued at $16 million, and miscellaneous receipts (mainly resales) of $50 million.

This industry's shipments of costume jewelry and notions (primary products) in 1967 represented 95 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was also 95 percent. Secondary products shipped by this industry in 1967 consisted mainly of jewelry, precious metal ($9 million).

Industry 3961 shipments of costume jewelry and notions (primary products) in 1967 represented 92 percent (coverage ratio) of these products valued at $338 million shipped by all industries. In 1963, the coverage ratio was 95 percent. Other industries shipping costume jewelry and notions (primary products) consisted mainly of industry 3911, Jewelry, Precious Metal, $24 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3961, these establishments accounted for 4 percent of payroll and 5 percent of value added by manufacture.

3962--FEATHERS, PLUMES, AND ARTIFICIAL FLOWERS

This industry comprises establishments primarily engaged in manufacturing artificial flowers, fruits, and foliage made from all materials except glass (industry 3231); in producing fancy feathers, plumes, and articles made principally of feathers and plumes; and curling, dyeing, and renovating ostrich feathers for the trade. For a detailed list of products of industry 3962, refer to table 6A, product codes 3962013 to 3962021.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Artificial Flowers Industry in 1967 totaled $85 million. This included shipments of artificial flowers (primary products), valued at $74 million, shipments of other products (secondary products) valued at $2 million, and miscellaneous receipts (mainly resales) of $9 million.

This industry's shipments of artificial flowers (primary products) in 1967 represented 97 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was also 97 percent.

Industry 3962 shipments of artificial flowers (primary products) in 1967 represented 85 percent (coverage ratio) of these products valued at $86 million shipped by all industries. In 1963, the coverage ratio was 87 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3962, these establishments accounted for 7 percent of payroll and 8 percent of value added by manufacture.

3963--BUTTONS

This industry comprises establishments primarily engaged in manufacturing buttons, button parts, and button blanks and molds, of all materials except precious metal and precious or semiprecious stones (industry 3911). For a detailed list of products of industry 3963, refer to table 6A, product codes 3963011 to 3963098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Buttons Industry in 1967 totaled $81 million. This included shipments of buttons (primary Products), valued at $75 million, shipments of other products (secondary products) valued at $3 million, and miscellaneous receipts (mainly resales) of $3 million.

This industry's shipments of buttons (primary products) in 1967 represented 97 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 96 percent.

Industry 3963 shipments of buttons (primary products) in 1967 represented 90 percent (coverage ratio) of these products valued at $84 million shipped by all industries. In 1963, the coverage ratio was 87 percent. Other industries shipping buttons (primary products) included industry 3964, Needles, Pins and Fasteners, $4 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3963, these establishments accounted for 5 percent of payroll and 6 percent of value added by manufacture.

3964--NEEDLES, PINS, HOOKS AND EYES, AND SIMILAR NOTIONS

This industry comprises establishments primarily engaged in manufacturing notions, such as machine and hand needles, pins, hooks and eyes, eyelets, buckles, and slide and snap fasteners. For a detailed list of products of industry 3964, refer to table 6A, product codes 3964121 to 3964289.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Needles, Pins and Fasteners Industry in 1967 totaled $385 million. This included shipments of needles, pins and fasteners (primary products), valued at $342 million, shipments of other products (secondary products) valued at $24 million, and miscellaneous receipts (mainly resales) of $20 million.

This industry's shipments of needles, pins and fasteners (primary products) in 1967 represented 93 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 91 percent. Secondary products shipped by this industry in 1967 included buttons and parts ($4 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 57 percent of the total industry shipments are represented by plants specializing in product class 39641, zippers and slide fasteners; and 37 percent in 39642, needles, pins, fasteners (except slide) and similar notions.

Industry 3964 shipments of needles, pins and fasteners (primary products) in 1967 represented 89 percent (coverage ratio) of these products valued at $382 million shipped by all industries. In 1963, the coverage ratio was 92 percent. Other industries shipping needles, pins and fasteners (primary products) included industry 3461, Metal Stampings, $18 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3964, these establishments accounted for 1 percent of payroll and 1 percent of value added by manufacture.

Note: In 1967, 1963, and 1958, the number of companies in industry 3951 was 113, 122, and 141, respectively; in industry 3952: 123, 140, and 138; industry 3953: 561, 581, and 497; industry 3955: 87, 91, and 97; industry 3961: 763, 910, and 1,046; industry 3962: 319, 367, and 428; industry 3963: 227, 282, and 347; industry 3964: 262, 314, and 340. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: -Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability. (Z) Under 50 thousand (or under 50 employees.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry..

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [c]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]From 10 to 30 percent of this figure was estimated.

[1]Represents felt-tipped markers.

[2]1967 data for product code 39610 11, "Base metal rings and ring mountings" are included with product code 39610 98, "Other costume jewelry, etc."

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at the individual product level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization--the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization--the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

MISCELLANEOUS MANUFACTURES

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3991--Brooms and Brushes
3993--Signs and Advertising Displays
3994--Morticians' Goods
3996--Linoleum, Ashpalted-Felt-Base, and Other Hard Surface Floor Coverings, Not Elsewhere Classified
3999--Manufacturing Industries, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3991--BROOMS AND BRUSHES

This industry comprises establishments primarily engaged in manufacturing household, industrial, and street sweeping brooms; and brushes, such as paint brushes, toothbrushes, toilet brushes, and household and industrial brushes. For a detailed list of products of industry 3991, refer to table 6A, product codes 3991113 to 3991398.

While the identifying code number for this industry has been changed from the code number used in 1963, the content of the industry is unchanged.

Value of shipments and other receipts of the Brooms and Brushes Industry in 1967 totaled $372 million. This included shipments of brooms and brushes (primary products), valued at $271 million, shipments of other products (secondary products) valued at $32 million, and miscellaneous receipts (mainly resales) of $70 million.

This industry's shipments of brooms and brushes (primary products) in 1967 represented 90 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 89 percent.

Industry 3991 shipments of brooms and brushes (primary products) in 1967 represented 92 percent (coverage ratio) of these products valued at $295 million shipped by all industries. In 1963, the coverage ratio was 93 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other

Government agencies and the remaining statistics estimated from industry averages. For industry 3991, these establishments accounted for approximately 3 percent of payroll and 3 percent of value added by manufacture.

3993--SIGNS AND ADVERTISING DISPLAYS

This industry comprises establishments primarily engaged in manufacturing electrical, mechanical, cutout, or plate signs and advertising displays, including neon signs and advertising novelties. Sign painting shops doing business on a custom basis are classified in industry 7399. Establishments primarily engaged in manufacturing electric signal equipment are classified in industry 3662, and lighting fixtures in industry 3642. For a detailed list of products of industry 3993, refer to table 6A, product codes 3993111 to 3993311.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Signs and Advertising Displays Industry in 1967 totaled $875 million. This included shipments of signs and advertising displays (primary products), valued at $762 million, shipments of other products (secondary products) valued at $21 million, and miscellaneous receipts of $92 million.

This industry's shipments of signs and advertising displays (primary products) in 1967 represented 97 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 96 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 42 percent of the total industry shipments are represented by plants specializing in product class 39932, nonelectric signs and advertising displays; and 25 percent in 39931, luminous tubing and bulb signs.

Industry 3993 shipments of signs and advertising displays (primary products) in 1967 represented 95 percent (coverage ratio) of these products valued at $801 million shipped by all industries. In 1963, the coverage ratio was also 95 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3993, these establishments accounted for approximately 6 percent of payroll and 8 percent of value added by manufacture.

3994--MORTICIANS' GOODS

This industry comprises establishments primarily engaged in manufacturing caskets, coffins, burial cases, and coffin shipping cases, whether of wood or other material except concrete (industry 3272); morticians' supplies and accessories, such as burial garments, gloves, slippers, casket linings, and embalming fluids; and morticians' paraphernalia and equipment. For a detailed list of products of industry 3994, refer to table 6A, product codes 3994111 to 3994398.

While the identifying code number for this industry has been changed from the code number used in 1963, the content of the industry is unchanged.

Value of shipments and other receipts of the Morticians' Goods Industry in 1967 totaled $306 million. This included shipments of morticians' goods (primary products), valued at $282 million, shipments of other products (secondary products) valued at $14 million, and miscellaneous receipts (mainly resales) of $10 million.

This industry's shipments of morticians' goods (primary products) in 1967 represented 95 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was also 95 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 56 percent of the total industry shipments are represented by plants specializing in product class 39941, Metal caskets and coffins, completely lined and trimmed.

Industry 3994 shipments of mortician's goods (primary products) in 1967 represented 98 percent (coverage ratio) of these products valued at $288 million shipped by all industries. In 1963, the coverage ratio was also 98 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3994, these establishments accounted for approximately 3 percent of payroll and 3 percent of value added by manufacture.

3996--LINOLEUM, ASPHALTED-FELT-BASE, AND OTHER HARD SURFACE FLOOR COVERINGS, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing linoleum, asphalted-felt-base, and other hard surface floor coverings, not elsewhere classified. Establishments primarily engaged in manufacturing rubber floor coverings are classified in industry 3069, and cork floor and wall tile in industry 2499. For a detailed list of products of industry 3996, refer to table 6A, product codes 3996111 to 3996265.

While the identifying code number for this industry has been changed from the code number used in 1963, the content of the industry is unchanged.

Value of shipments and other receipts of the Hard Surface Floor Coverings Industry in 1967 totaled $222 million. This included shipments of hard surface floor coverings (primary products), valued at $186 million, shipments of other products (secondary products) valued at $31 million, and miscellaneous receipts (mainly resales) of $5 million.

This industry's shipments of hard surface floor coverings (primary products) in 1967 represented 86 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 82 percent.

Industry 3996 shipments of hard surface floor coverings (primary products) in 1967 represented 97 percent (coverage ratio) of these products valued at $192 million shipped by all industries. In 1963, the coverage ratio was 98 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3996, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

3999--MANUFACTURING INDUSTRIES, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing miscellaneous fabricated products, including beauty shop and barber shop equipment; hair work; tobacco pipes and cigarette holders; coin-operated amusement machines; matches; candles; lamp shades; dressed and dyed furs; unbrellas; parasols and canes; and other articles, not elsewhere classified. For a detailed list of products of industry 3999, refer to table 6A, product codes 3999111 to 3999998.

The code number for this industry in the Standard Industrial Classification Manual is unchanged, but the content of the industry has been significantly changed from the classification system used in 1963. The change in composition of the industry as now constituted, compared with that under the classification system followed in the 1963 Census, is due principally to previous industries 3983, Matches; 3984, Candles; 3987, Lamp Shades; 3992, Furs, Dressed and Dyed; and 3995, Umbrellas, Parasols, and Canes, being included in this industry for 1967.

Value of shipments and other receipts of the Manufactures, N.E.C., Industry in 1967 totaled $943 million. This included shipments of manufactured products n.e.c. (primary products), valued at $827 million, shipments of other products (secondary products) valued at $51 million, and miscellaneous receipts (mainly resales) of $65 million.

This industry's shipments of manufactured products, n.e.c. (primary products) in 1967 represented 94 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio for 1963 is not available.

Industry 3999 shipments of manufactured products, n.e.c. (primary products) in 1967 represented 90 percent (coverage ratio) of these products valued at $922 million shipped by all industries. For 1963, the coverage ratio is not available.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3999, these establishments accounted for approximately 4 percent of payroll and 4 percent of value added by manufacture.

TABLE 1A. General Statistics: 1958 to 1967–Continued

Footnotes for table 1A--39D

Note: In 1967, 1963, and 1958, the number of companies in industry 3991 was 516, 628, and 713, respectively; in industry 3993: 3,159, 3,165, and 2,691; industry 3994: 527, 581, and 562; industry 3996: 18, 13, and 10; industry 3999: 2,165, (NA), and (NA). The 1967 company counts in include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors of the 1966/1965 relatives for employment and value added were as follows: industry 3991, 2 and 4, respectively; industry 3993, 3 and 4, respectively; industry 3994, 2 and 6 respectively; industry 3996, 1 and 1, respectively; and industry 3999, 5 and 4, respectively.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

[3]The code for this industry was 3981 through 1966. However, no change in definition was involved in changing the code to SIC 3991 in 1967.

[4]Production workers for this industry may be overstated by 1 to 2 percent. This resulted from an overestimation for the administrative record class of establishments by as much as 20 percent due to an error in the imputation process. Other data were not affected.

[5]The code for this industry was 3988 through 1966. However, no change in definition was involved in changing the code to SIC 3994 in 1967.

[6]The code for this industry was 3982 through 1966. However, no change in definition was involved in changing the code to SIC 3996 in 1967.

[7]This industry has been redefined significantly from the definition used in the 1966 Annual Survey of Manufactures and in prior years. This industry now includes the following SIC industries for prior years.

SIC	Title	SIC	Title
3983	Matches	3992	Furs, dressed and dyed
3984	Candles	3995	Unbrellas, parasols and canes
3987	Lamp shades	3999	Miscellaneous products, N.E.C.

The figures for 1966 and prior years have been revised accordingly.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]Production workers for this industry may be overstated by 1 to 2 percent. This resulted from an overestimation for the administrative record class of establishments by as much as 20 percent due to an error in the imputation process. Other data were not affected.

[3]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [e] Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees.)

[1] Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

[2] Production workers for this industry may be overstated by 1 to 2 percent. This resulted from an overestimation for administrative record class of establishments by as much as 20 percent due to an error in the imputation process. Other data were not affected.

[3] Includes an unspecified amount for plants under construction but not in operation.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

39990 02	Miscellaneous products, n.e.c., n.s.k. (For companies with less than 10 employees. See Note.)	...	(X)	41.2		

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]From 10 to 30 percent of this figure was estimated.

[1]1967 data for product code 3996241, "Other asphalted-felt-base floor covering" and product code 3996251, "Wall covering" are included with product codes 3996111, 3996131, 3996211, and 3996221 to avoid disclosing figures of individual companies.

[2]Data for 1967 for product code 3999115, "Vaporizing liquid (carbon-tetrachloride base)," has been combined with product code 3999119, "Other extinguishers, including foam."

[3]Includes the value for work done on materials owned by others.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at the individual product level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

[2]For 1963-1967, and 1958 includes receipts for work done on materials owned by others. Such receipts are excluded in other years.

[1]Included with material code 970099, "All other materials and components, etc." to avoid disclosing figures for individual companies.

[2]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967 this includes estimates for companies that were not mailed report forms.

[3]Includes $87.4 million cost of materials for establishments previously classified in industries relating to matches, candles, lamp shades, furs (dressed and dyed), and umbrellas, parasols and canes. These were separate industries for 1963 for which no detailed materials data were available.

[4]No data are available on the quantities of copper and copper-base alloy castings produced and consumed in the same establishment.

[1]Represents the quantity of purchased electric energy and the kilowatt-hours equivalent of all fuels used for heat and power.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Ordnance and Accessories

19A Ordnance and accessories

For 1953 and earlier years, data for Major Group 19, Ordnance and Accessories, are included with Major Group 39 in table 1.

For 1954 and subsequent years Major Group 19 data are published separately. However, in some tables within these volumes, data for Major Group 19 are given both separately and combined with Major Group 39.

Major Group 19 covers establishments primarily engaged in manufacturing artillery, small arms, and related equipment; ammunition; tanks and specialized tank parts; sighting and fire control equipment; and, miscellaneous ordnance and accessories, not elsewhere classified.

[1]The figures for 1939 through 1967 include data for employees of manufacturing establishments who were engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known.

[2]For the period 1954 to 1967, figures represent adjusted value added by manufacture and for earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year, without adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year.

[3]The total value of shipments and cost of materials for industry group (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry classification. For more information, see Introduction.

[4]The figures for 1958 to 1967 include expenditures for plants under construction and not yet in operation.

[5]In 1954 and 1967, data for administrative and auxiliary establishments for Major Group 19, "Ordnance and Accessories", are included with Major Group 39, "Miscellaneous Manufactures."

[6]Data for 1958 to 1967 include establishments primarily engaged in manufacturing complete guided missiles, and in performing research and development on complete guided missiles.

[7]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [6]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]The value of shipments and cost of materials for industry groups (2- and 3-digit) includes extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

[1] The value of shipments and cost of materials for industry groups (2- and 3-digit) includes extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

[2] Establishments in these industries reported value of work done rather than value of shipments. Consequently the formula for computing value added by manufactures was not adjusted for inventory change between the beginning and end of the year.

ORDNANCE AND ACCESSORIES

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

1911--Guns, Howitzers, Mortars, and Related Equipment
1925--Guided Missiles and Space Vehicles, Completely Assembled
1929--Ammunition, except for Small Arms, Not Elsewhere Classified
1931--Tanks and Tank Components
1941--Sighting and Fire Control Equipment
1951--Small Arms
1961--Small Arms Ammunition
1999--Ordnance and Accessories, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

1911--GUNS, HOWITZERS, MORTARS, AND RELATED EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing naval, aircraft, antiaircraft, tank, coast, and field artillery having a bore over 30 mm. (or over 1.18 inch), and components. Establishments primarily engaged in manufacturing small arms and parts 30 mm. (or 1.18 inch) and below are classified in industry 1951. However, all statistics for industry 1911 are combined with those for industry 1999 in 1967, with the exception of a value of shipments figure for the products primary to industry 1911. The latter figure is shown separately in table 6A.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 1911, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

1925--GUIDED MISSILES AND SPACE VEHICLES, COMPLETELY ASSEMBLED

This industry comprises establishments primarily engaged in manufacturing completely assembled guided missiles and space vehicles. Establishments primarily engaged in manufacturing guided missile and space vehicle engines and engine parts are classified in industry 3722; space satellite, and guided missile and space vehicle airborne and ground guidance, check-out and launch electronic systems and components in industry 3662; and guided missile and space vehicle airframes, nose cones, and space capsules in industry

3729. For a detailed list of products of industry 1925, refer to table 6A product codes 1925111 to 1925523.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of work done and other receipts of the Complete Guided Missiles Industry in 1967 totaled $4,641 million. This included work on complete guided missiles (primary products), valued at $3,750 million, shipments of other products (secondary products) valued at $465 million, and miscellaneous receipts of $426 million.

This industry's receipts for work done on complete guided missiles (primary products) in 1967 represented 89 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 94 percent. Secondary products shipped by this industry in 1967 consisted mainly of aircraft equipment, n.e.c. ($194 million), and radio and TV communication equipment ($111 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 28 percent of the total industry shipments are represented by plants specializing in product class 19252, Space vehicle systems; and 27 percent in 19253, Research and development on complete guided missiles.

Value of work done on complete guided missiles by industry 1925 in 1967 represented 87 percent (coverage ratio) of these products valued at $4,328 million shipped by all industries. In 1963, the coverage ratio was 69 percent. Other industries shipping complete guided missiles (primary products) consisted mainly of Industry 3721, Aircraft, $435 million; and Industry 3729, Aircraft Equipment, N.E.C., $123 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. Industry 1925 had no such establishments.

1929--AMMUNITION, EXCEPT FOR SMALL ARMS, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing ammunition, not elsewhere classified, or in loading and assembling ammunition over 30 mm. (or over 1.18 inch) for naval, aircraft, antiaircraft, tank, coast, and field artillery; including component parts. This industry also includes establishments primarily engaged in manufacturing bombs, mines, torpedoes, grenades, depth charges, chemical warfare projectiles, and their component parts. Establishments primarily engaged in manufacturing small arms ammunition are classified in industry 1961; explosives in industry 2892; and military pyrotechnics in industry 2899. For a detailed list of products of industry 1929, refer to table 6A, product codes 19291-- to 19293--.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Ammunition, N.E.C., Industry in 1967 totaled $2,464 million. This included shipments of ammunition, n.e.c. (primary products), valued at $2,102 million shipments of other products (secondary products) valued at $187 million, and miscellaneous receipts of $175 million.

This industry's shipments of ammunition, n.e.c. (primary products) in 1967 represented 92 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 70 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 51 percent of the total industry shipments are represented by plants specializing in product class 19291, Artillery ammunition, over 30 mm.

Industry 1929 shipments of ammunition, n.e.c. (primary products) in 1967 represented 85 percent (coverage ratio) of these products valued at $2,462 million shipped by all industries. In 1963, the coverage ratio was 82 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 1929, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

1931--TANKS AND TANK COMPONENTS

This industry comprises establishments primarily engaged in manufacturing or assembling complete tanks, and specialized components for tanks. Establishments primarily engaged in manufacturing military vehicles other than tanks are classified in Group 371, and tank engines in industry 3519.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Tanks And Tank Components Industry in 1967 totaled $394 million. This included shipments of tanks and tank components (primary products), valued at $312 million, shipments of other products (secondary products) valued at $54 million, and miscellaneous receipts of $28 million.

This industry's shipments of tanks and tank components (primary products) in 1967 represented 85 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 95 percent.

Industry 1931 shipments of tanks and tank components (primary products) in 1967 represented 76 percent (coverage ratio) of these products valued at $409 million shipped by all industries. In 1963, the coverage ratio was 79 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 1931, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

1941--SIGHTING AND FIRE CONTROL EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing sighting and fire control equipment, but which are not engaged in manufacturing optical lenses and prisms. Important products of this industry include bomb sights, percentage correctors, wind correctors, directors, and sound locators. Establishments engaged in manufacturing optical lenses and prisms, and also manufacturing sighting and fire control equipment, are classified in industry 3831, and computers and computer systems in industry 3573.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Sighting and Fire Control Equipment Industry in 1967 totaled $102 million.

This industry's shipments of sighting and fire control equipment (primary products) in 1967 represented 50 to 60 percent (sepcialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 57 percent.

Industry 1941 shipments of sighting and fire control equipment (primary products) in 1967 represented 40 to 50 percent (coverage ratio) of these products valued at $107 million shipped by all industries. In 1963, the coverage ratio was 80 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 1941 these establishments accounted for less than 1 percent of payroll and value added by manufacture.

1951--SMALL ARMS

This industry comprises establishments primarily engaged in manufacturing small firearms having a bore 30 mm. (or 1.18 inch) and below, and parts for small firearms. Also included in this industry are establishments primarily engaged in manufacturing certain weapons over 30 mm. which are carried and employed by the individual, such as grenade launchers and heavy field machine guns. Establishments primarily engaged in manufacturing artillery and mortars having a bore over 30 mm. (or over 1.18 inch), and component parts, are classified in industry 1911. For a detailed list of products of industry 1951, refer to table 6A, product codes 1951113 to 1951281.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Smalls Arms, Industry in 1967 totaled $384 million. This included shipments of small arms, 30 mm. and under (primary products), valued at $341 million, shipments of other products (secondary products) valued at $28 million, and miscellaneous receipts (mainly products bought and resold) of $15 million.

This industry's shipments of small arms, 30 mm. and under (primary products) in 1967 represented 92 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 95 percent.

Industry 1951 shipments of small arms (primary products) in 1967 represented 94 percent (coverage ratio) of these products valued at $362 million shipped by all industries. In 1963, the coverage ratio was 82 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 1951, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

1961--SMALL ARMS AMMUNITION

This industry comprises establishments primarily engaged in manufacturing ammunition for small arms having a bore of 30 mm. (or 1.18 inch) and below. Establishments primarily engaged in manufacturing ammunition except for small arms are classified in group 192, blasting and detonating caps and safety fuses in industry 2892, and fireworks in industry 2899. For a detailed list of products of industry 1961, refer to table 6A, product codes 1961012 to 1961089.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Small Arms Ammunition Industry in 1967 totaled $596 million. This included shipments of small arms ammunition (primary products), valued at $565 million, shipments of other products (secondary products) valued at $19 million, and miscellaneous receipts of $12 million.

This industry's shipments of small arms ammunition (primary products) in 1967 represented 97 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 85 to 100 percent.

Industry 1961 shipments of small arms ammunition (primary products) in 1967 represented 99 percent (coverage ratio) of these products valued at $573 million shipped by all industries. In 1963, the coverage ratio was 92 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 1961, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

1999--ORDNANCE AND ASSESSORIES, NOT ELSEWHERE CLASSIFIED

The Ordnance and Accessories, Not Elsewhere Classified, Industry includes establishments primarily engaged in manufacturing ordnance and accessories, not elsewhere classified. However, in 1967 all statistics for industry 1999 include those for industry 1911, with the exception of a value of shipments figure for the products primary to industry 1911. The latter figure is shown separately in table 6A. Therefore, the textual material below represent the activities of industries 1911 and 1999 combined.

Value of shipments and other receipts of the Ordnance and Accessories, N.E.C., Industry in 1967 totaled $688 million. This included shipments of ordnance and accessories, n.e.c. (primary products), valued at $523 million, shipments of other products (secondary products) valued at $127 million, and miscellaneous receipts (mainly contract work on materials owned by others) of $38 million.

This industry's shipments of ordnance and accessories, n.e.c. (primary products) in 1967 represented 80 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 78 percent.

Industry 1999 shipments of ordnance and accessories, n.e.c. (primary products) in 1967 represented 61 percent (coverage ratio) of these products valued at $858 million shipped by all industries. In 1963, the coverage ratio was 69 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 1999, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

Note: In 1967, 1963, and 1958, the number of companies in industry 1911 was 9, (NA), and 4, respectively; in industry 1925: 25, 25, and 18; industry 1929: 82, 38, and 48; industry 1931: 23, 23, and 15; industry 1941: 14, 13, and 18; industry 1951: 69, 52, and 34; industry 1961: 39; 27, and 20; industry 1999: 87, 54, and 45. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4 and includes data only for privately owned and/or operated establishments. Government owned and operated establishments are excluded.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [r]Revised. [*]These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures in table 1 of the chapter devoted to this industry.

[3]Establishments in this industry reported value of work done rather than value of shipments. Consequently the formula for computing value added by manufactures was not adjusted for inventory change between the beginning and end of the year.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [6]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

[1]The proportion of product shipments (both primary and secondary) of the industry represented by primary products.

[2]The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

[3]For industry 1925, represents value of work done.

[3] Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

[2]For industry 1961, secondary products are included with miscellaneous receipts in 1963.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Includes data only for privately-owned and/or operated establishments. Government-owned and operated establishments are excluded.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e] From 10 to 30 percent of this figure was estimated.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at the individual product level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [c]From 10 to 30 percent of this figure was estimated.

[1]No data are available for the quantities of castings, forgings or electric motors and generators produced and consumed in the same establishment.

[2]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967, this includes estimates for companies that were not mailed report forms.

[3]These figures are understated by approximately 70 million because of apparent undercoverage of carbon pipe and tube.

[4]Included with material code 970099, "All other material and components, etc."

[1]Represents the quantity of purchased electric energy and the kilowatt hours equivalent of all fuels used for heat and power.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization--the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization--the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

TABLE 9. Establishments and Production Workers for Selected Metalworking Operations: 1967

(To be published in a separate subject chapter titled "Selected Metalworking Operations.")

Appendix A

EXPLANATION OF TERMS

Employment and Payrolls.—The census of manufactures provides information on employment and payrolls at operating establishments and central administrative offices and auxiliaries. On the standard forms for manufacturing establishments, the number of production workers by quarter and all other employees during the pay period including March 12 was requested. Form NC-X6, "Central Administrative Offices and Auxiliaries" called for employment as of March 12 only. Both forms called for salaries and wages paid for the year.

All Employees.—This category comprises all full-time and part-time employees who worked or received pay for any part of the pay periods including the 12th of the months specified on the report forms. Included are all persons on paid sick leave, paid holidays, and paid vacations during these pay periods. Excluded are members of the Armed Forces and pensioners carried on the active rolls but not working during the period. Officers of corporations are included as employees; proprietors and partners of unincorporated firms, however, are excluded.

In special cases, respondents were instructed to exclude agricultural or fishery employment and related data from their reports. These were sugar mills operated as part of plantations, canning or freezing plants operated in conjunction with farms, and fish processing plants engaged in fishing.

Production and Related Workers.—This category comprises workers (up through the working foreman level) engaged in fabricating, processing, assembling, inspection, receiving, storage, handling, packing, warehousing, shipping (but not delivering), maintenance, repair, janitorial, watchman services, product development, auxiliary production for plant's own use (for example, power plant), recordkeeping, and other services closely associated with these production operations at the establishment covered by the report. Supervisory employees above the working foreman level were excluded from this category.

All Other Employees.—These are defined as nonproduction personnel, including employees engaged in the following activities: Factory supervision above the working foreman level, sales (including driver-salesmen), sales delivery (highway truck drivers and their helpers), advertising, credit, collection, installation and servicing of own products, clerical and routine office functions, executive, purchasing, financing, legal, personnel (including cafeteria, medical, etc.), professional, and technical. Also included are employees on the payroll engaged in the construction of major additions or alterations to the plant and utilized as a separate work force.

Average Employment.—The number of production workers as shown in the census tabulations is an average of the four quarterly figures reported by manufacturing plants. The "all employees" figure is the sum of this average and the reported number of other employees as of March 12.

Payrolls.—This category includes the gross annual earnings of employees on the payroll. Respondents were told they could follow the definition of payrolls used for calculating the Federal withholding tax. This definition includes all forms of compensation such as salaries, wages, commissions, dismissal pay, bonuses, vacation and sick leave pay, and compensation in kind, prior to such deductions as employees' Social Security contributions, withholding taxes, group insurance, union dues, and saving bonds. The total includes salaries of officers of these establishments, if a corporation; it excludes payments to the proprietor or partners, if an unincorporated concern. Also excluded are payments to members of Armed Forces and pensioners carried on the active payroll.

The 1967 census definition of payrolls is identical to that recommended to all Federal statistical agencies by the Bureau of the Budget. This definition does not include supplementary labor costs such as employer's Social Security contributions and other legally required expenditures, or payments for voluntary programs. Data on such supplementary labor costs were collected in the ASM and are scheduled for publication in the ASM reports, but are not included in the census volumes.

Man-Hours.—This total consists of all plant man-hours of production and related workers as defined above. It represents all man-hours at the plant including actual overtime hours, not straight-time equivalent hours. It excludes hours paid for vacations, holidays, or sick leave, when the employee was not actually at the plant. Where employees elected to work during the vacation period, the actual hours worked by such employees were reported.

Cost of Materials, etc., Consumed.—A summary inquiry on form MA-100 and the other manufacturing establishment report forms requested information on the cost of materials, supplies, semifinished goods, fuels, and electric energy actually consumed or put into production during the year and the cost of products purchased for resale, whether purchased, withdrawn from inventories, or received from other establishments of the company. Included also are the costs of materials supplied by the establishment which were processed elsewhere on contract for the establishment. "Cost" was defined as the direct charges actually paid or payable for items consumed or put into production during the year, after discounts, and including freight charges and other direct charges incurred by the establishment in acquiring the materials.

To arrive at the industry total "cost of materials, etc."[1] separate figures were obtained for (a) the total delivered cost of all raw materials, semifinished goods, parts, components, containers, scrap, and supplies consumed or put into production, (b) the amount paid for

[1] In some tables this category is designated simply as "cost of materials."

electric energy purchased; (c) the amount paid for all fuels consumed for heat, power, or the generation of electricity; (d) the cost of work done by others on materials or parts furnished by the reporting establishment (contract work); and (e) the cost of products bought and resold in the same condition.

It should be noted that the cost of fuel consumed under "(c)" above does not include fuel used as a material in the manufacturing process; for example, coal used in the production of coke. Such costs are included with other materials cost in category "(a)" above.

The total excludes the cost of services used, such as advertising, insurance, telephone, etc., and developmental, research, and consulting services of other establishments. It also excludes overhead costs, such as depreciation charges, rent, interest, royalties, etc., and materials, machinery, and equipment used in plant expansion or capitalized repairs which are chargeable to fixed assets accounts.

For materials received from other plants of the same company or from a central materials depot (whether at the same or different physical location), respondents were asked to value the items at their full economic value as produced, plus freight and other direct handling charges. The respondents were asked to check, where possible, that the cost equaled the value of shipments reported for the items by the company's plant which produced and transferred the goods, plus freight and other direct charges.

Value of Shipments.—Except in a few industries, the respondents were instructed to report net selling values, f.o.b. plant, after discounts and allowances and excluding freight charges and excise taxes. For a few industries, specifically noted in the text of the industry chapters, Volume II, delivered prices were requested if delivery by employees of the establishment was a routine practice, as in the milk and bakery industries.

For most industries, value of shipments is readily available from accounting records and is closely related to the value of production. In a small group of industries, however, value of production or of work done was requested. This instruction was of particular importance in the aircraft and shipbuilding industries, where the shipments or deliveries of complete units may be a poor approximation of the work actually done during a given year.

Manufacturers were asked to include as products shipped, not only the products made in the establishment but also those made elsewhere under contract from the materials owned by the establishment. Included were all products sold, transferred to other parts of the same company, or shipped on consignment. The duplication in value of shipments and cost of materials arising because of the shipment of semifinished products among manufacturing plants is discussed in Part III of the Introduction, which also includes comments on the valuation of intracompany shipments by multiunit firms.

Miscellaneous Receipts.—In addition, manufacturers reported receipts for contract work performed for others, resales (that is, the value of all products resold without further processing), receipts for miscellaneous activities such as sale of scrap and refuse, and the value of installation and repair work performed by the plant employees. Although the value of products bought and resold without further processing is included in the value of shipments totals for each industry, it is excluded from the figures for individual products or classes of products.

Value Added by Manufacture.—This figure is derived by subtracting the total cost of materials (including materials, supplies, fuel, electric energy, cost of resales and contract work done by others) from the value of shipments including resales, and other receipts and adjusting the resulting amount by the net change in finished products and work-in-process inventories between the beginning and end of the year.[2]

Value added avoids the duplication in the value of shipments figure which results from the inclusion of the shipments of establishments producing materials and components along with the shipments of establishments producing finished products. It is considered to be the best value measure available for comparing the relative economic importance of manufacturing among industries and geographic areas.

Inventories.—The value of beginning-of-year and end-of-year inventories held by each manufacturing establishment was obtained in the 1967 census. Separate inventory figures were requested for (1) finished products; (2) work in process; and (3) materials, supplies, fuel, and other inventories.

Respondents were asked to report their inventories at approximate current costs if feasible; otherwise, at book value. Since different methods of inventory valuation are used (LIFO, FIFO, etc.), the value of inventories aggregated for all establishments in an industry is not precisely defined. The importance of reporting inventories on a comparable basis was emphasized in the instructions; thus the year-to-year change in inventories indicated by the census figures is of more significance than their level.

In using inventory data by stage of fabrication for all industries and at the 2-digit industry level, it should be noted that an item treated as a finished product by one establishment may be reported as a material by another establishment. For example, the finished product inventories of a steel mill would be reported as materials by a stamping plant. Such differences are present in the inventory figures by stage of fabrication for individual industries, industry groups, and all manufacturing, since these figures are merely aggregates of the figures reported by establishments.

Multiunit companies were instructed to include the inventories held by each establishment in that establishment's report. The inventory data tabulated on a geographic basis are believed, therefore, to reflect the actual physical holdings in each area, to the extent that the inventories were owned by the reporting companies. It is

[2] For a few industries (for example, aircraft, shipbuilding) where value of work done is substituted for value of shipments, no adjustment is made for change in inventories. In a few other industries where value of production is collected, the inventory adjustment is made only on the basis of change in work-in-process inventories.

not clear where goods owned by one company and stored by another were reported.

Special instructions on inventories were issued for two industries in the food group. Meatpacking establishments were told to report work in process separately only if separate records were maintained, otherwise to combine work in process with finished products. Distillers were instructed to include stocks of liquors held for aging as finished products, not as work in process.

Capital Expenditures.—Under this heading, manufacturers were instructed to report expenditures of the type chargeable to fixed assets accounts, for which depreciation reserves are normally maintained. Actual capital outlays during the year were requested, not the final value of equipment put in place or structures completed during the year. It was suggested to the respondents that capital expenditures, as thus defined, could be computed by the following formula: The cost of additions completed during the year, plus construction in progress at the end of the year, less construction in progress at the beginning of the year. It was specified that the census definition of capital expenditures was to be used in computing the gross value of fixed assets discussed below.

Capital expenditures include the cost of plant and equipment for replacement purposes, as well as for additions to productive capacity. Costs associated with plants under construction but not in operation during the year are also included. The method of collecting data for plants under construction is described in the Introduction, Section 7, "Reporting Forms." Capital expenditures do not include plant and equipment furnished to the manufacturer without charge by governmental or private organizations. The value of rented facilities is also excluded.

New Structures and Additions to Plant.—This category includes all construction and other land improvements, whether built on contract or by the manufacturer's own labor force. Included are major alterations; capitalized repairs; new elevators, cranes, heating and air-conditioning equipment essentially a part of buildings; fixed structures such as blast furnaces, brick kilns, fractionating towers, and shipways; and land improvements such as roads, fences, parking lots, and railroad spurs.

New Machinery and New Equipment.—This category includes production and all other machinery and equipment. Included are motors, lathes, presses, looms, and other production machinery; office machines and fixtures; furniture; automobiles, trucks, and handling equipment. Major repairs or improvement to existing equipment are included if the cost is capitalized, as well as equipment manufactured by the plant for use in its own production.

Used Plant and Equipment.—This category represents expenditures for old or existing plants and for secondhand equipment acquired from others. Transfers of used equipment between plants of multiunit companies are included. The companies were instructed to report such transfers at their current value rather than original cost. The Census Bureau estimates of capital expenditures as compared to those published in the joint Office of Business Economics-Securities and Exchange Commission survey are discussed in the Introduction.

Fuels and Electric Energy.—Separate data were collected in the census for coal, coke, fuel oil, gas, and other fuels used for heat and power; purchased electric energy, electric energy generated by manufacturing establishments; and energy generated less the amount sold. Fuels used as a raw material (as coal in the production of coke) are included in the cost of materials rather than in the fuel category.

Assets and Rents.—Data on the gross value of fixed assets owned and rental payments for leased fixed assets were collected in the ASM. These figures are scheduled for publication in the ASM series, but are not included in the census volumes.[3]

[3]Earlier reports on these topics include chapter 9 of Volume I, Summary Statistics, in the 1958 census, and chapter 7 of the ASM Volume for 1964-65.

INDUSTRY DESCRIPTIONS

This appendix is included in Volume I, Summary and Subject Statistics, and in Volume III, Area Statistics, but has been omitted from this volume. The appendix shows the industry descriptions for each industry. In this volume, these descriptions are shown in the text preceding the tables in each industry chapter.

Appendix C

COMPOSITION OF INDUSTRIES IN THE 1967 STANDARD INDUSTRIAL CLASSIFICATION

The censuses of manufactures for 1967 and 1963 covered all establishments engaged in manufacture as defined, respectively, in the **Standard Industrial Classification Manual (SIC)**, 1967 edition, and 1957 edition, as amended, issued by the Bureau of the Budget. The 1967 edition contained minor revisions in the SIC Manual for the manufacturing industries additional to those issued between 1957 and 1963.

Most of the manufacturing industries as defined in 1963 remained, without change, for 1967. In view of the minor nature of the revision, this appendix cites only those industries affected by a revision between 1963 and 1967. Presented in two parts, this appendix lists, in part 1, the industries as defined for 1967 in terms of their 1963 equivalents and, in part 2, the industries of 1963 in terms of their 1967 equivalents. No data for either year are presented. Comparability between the two census years is such that data from one year may be readily compared to data in the other year by making the industry combinations shown below. Titles of industries for either year are as published in the respective Census volumes for 1967 and 1963.

(Please correct if name or address has changed)

INTRODUCTORY NOTE

The Bureau of the Census is now conducting a census of establishments primarily engaged in the types of activities described in item 9 (on the reverse side). However, our records do not contain sufficient information on the kind of business or activity carried on at your establishment. Please complete item 1, Parts A and B below, to provide this information. Then proceed according to the instructions given in Part C (i.e., if you are primarily engaged in one of the business activities described in Part B, boxes 1–29, you are required to complete only item 1, sign the certification in item 12, and return the form in the envelope provided; otherwise, you are required to complete the entire form).

GENERAL INSTRUCTIONS

If you operated more than one establishment (or location) under the same Employer Identification Number shown in the address box, this report should include consolidated figures for all locations; in item 11, however, please provide information separately for each location. If your Employer Identification Number was changed from that appearing in the address label, enter the currently assigned Employer Identification Number for this establishment in item 3.

Information provided by you on this report should account for your business activities for the entire year 1967. If book figures are not available, enter your best estimates.

INSTRUCTIONS

This form will provide you and the Bureau of the Census with a systematic means for assuring that ALL DOMESTIC ACTIVITIES of your company and its subsidiaries have been accounted for in the 1967 Censuses of Business, Manufactures, and Mineral Industries. For the purposes of this report, "domestic" activities should include all 50 States and the District of Columbia. It should **not** include activities of your firm in foreign countries. (Note – Your Puerto Rico activities, if any, will be covered separately in the 1967 Census of Puerto Rico conducted jointly by the Commonwealth government and the U.S. Bureau of the Census.)

Please complete Form NC-K1, "Company Summary Report," **after** you have prepared all required 1967 Census establishment reports for your company and its subsidiaries, but **before** you return these completed reports to the Bureau of the Census. Preparing this Company Summary Report **prior** to returning the completed establishment reports may help you to discover more readily and to correct promptly any **omission** or **duplication** of reports for those establishments which should be covered in the 1967 Censuses of Business, Manufactures and Mineral Industries. In turn, this will speed up the Census Bureau's processing of your company report forms and will minimize any correspondence regarding coverage.

GENERAL INSTRUCTIONS

(See also specific instructions with Product Group Reference List)

As part of the 1967 Census of Manufactures, the Census Bureau is conducting this survey of the Distribution of Manufacturers' Sales by Class of Customer. The last such survey was conducted as part of the 1958 Census of Manufactures. This survey will provide a current analysis of the marketing channels through which the goods move from the manufacturer to the user or consumer. The results are needed for the improvement of the national income and product statistics.

Estimates are acceptable – We appreciate that there is no uniform system of sales analysis and that completeness of records varies considerably among companies. Therefore, some companies will have to use estimates to a far greater extent than they do on other Census surveys. If actual records are not available except at considerable expense, or if your class of customer or product groupings differ significantly from those requested, approximations will be acceptable.

What to report – You are requested to provide a summary company level report on the shipments of groups of products from your company's manufacturing plants and sales branches and offices. This report should include data for all domestic subsidiaries, divisions, and establishments as reported on Form NC-K1, "Company Summary Form." You are requested in section 1 to allocate the shipments from your manufacturing plants, including movements within the company, according to type of customer; and in section 2 to further trace the shipments which move from or on order from company operated sales branches, sales offices, and administrative offices.

Product groups – (See accompanying Reference Manual PGL-(NC-K4M).) Report groups of the products for which you report shipments from manufacturing establishments in item 9, Form MA-100. However, the products have been grouped into a smaller number of categories for this report. The Reference Manual lists the product categories for which class of customer information is to be reported and describes the products, as reported on Form MA-100, which are to be summarized into the groups.

At the head of each column, enter the product code and description from the manual. In distributing your sales by class of customer, include products bought and resold in the same condition (resales) in their appropriate product group. Exclude, however, miscellaneous receipts and receipts for contract and commission work. In both sections 1 and 2, please estimate the percent of each product group which is resales, lines 15 and 28.

Allocation of sales and shipments – Special instructions on reporting sales for a few particular products are included in the instructions. Unless there are such special instructions, use the following standards in completing this report.

Section 1 – Allocate the shipments from your manufacturing plants to the classes of customers described. In section 1A, list those customers which represent within company shipments, i.e., to other plants of the company for further processing or to the company's own wholesale or retail outlets. For purposes of section 1A, your sales branches and sales offices, if any, are considered as customers. If you report sales on line 1 (shipments to or on order from sales branches, sales offices or administrative offices), you must also report in section 2. **Products should be valued f.o.b. plant as reported on Form MA-100.**

Section 2 – Products sold from sales branches, sales offices, and administrative offices should be valued at sales price to the customer.

DESCRIPTION OF CLASS OF CUSTOMER

(Corresponds to report form line number)

Section 1A – SHIPMENTS, SALES OR TRANSFERS TO OTHER ESTABLISHMENTS OF THIS COMPANY

1. Sales branches, sales offices, administrative offices – Include shipments to or on orders received through those establishments of your company which report on Form CB-51A–51L, Census of Business, "Manufacturers' Sales Branches and Offices." These are establishments operated by the company primarily to sell the products manufactured by the company, although they may also sell products made by other companies. (These are distinguished from merchant wholesale establishments of the company, SEE line 2.) Also, for purposes of this inquiry consider as a sales office any administrative office which handles sales of the company. These establishments report on Form NC-X6, "Central Administrative Offices and Auxiliaries."

Include as shipments to sales branches, sales offices and administrative offices not only the value of products actually shipped from the plant to these establishments, but also products shipped from the plant to customers on order from the sales branch or office. If any sales are reported on line 1, section 1, sales from sales branches and sales offices, you must also complete section 2.

2. Merchant wholesale establishments – Report shipments to or orders from any establishment operated by this company for which you report in the 1967 Census of Business on Form CB-50A–50R.

3. Retail stores or outlets – Report sales through separately operated retail stores for which a report is also required in the Census of Business.

4. Other manufacturing plants – Report all transfers or shipments from one manufacturing plant of this company to another whether for further processing, for use as a material or supply, or for resales by the other plants.

5. Other establishments – Report all transfers or shipments to other plants of this company, such as mining, transportation, service, etc.

Section 1B – SHIPMENTS TO OTHER COMPANIES, INDIVIDUALS, GOVERNMENTS, AND EXPORT

6. Wholesalers – Include all wholesale companies purchasing primarily for resale to other businesses or to institutions and not directly to household consumers or farmers.

7. Retailers – (Do not include shipments to your company's own retail outlets.) Include sales to businesses which sell merchandise for personal, household, or farm consumption. Include all chain stores, mail order houses, department stores, independent retailers, including independent route salesmen such as bakery or dairy truck distributors who sell directly to households.

8. Manufacturers – Report sales to companies known to be engaged in manufacturing. Include as manufacturers food processors such as meat packers, bakeries, and bottling plants; sheet metal operations; feed mixers; logging camps; sawmills; printing; publishing; apparel jobbers; machine shops.

9. Commercial and industrial users, construction, State and local governments, private and public institutions – Include all private firms and businesses not considered manufacturers, retailers, or wholesalers. Thus, include companies engaged in construction, mining, transportation; as well as utilities, restaurants, hotels, and other businesses providing services; include hospitals and schools, as well as State and local governments. (Report sales to the Federal Government separately.) **Lines 9b (and 22b) are used only for product groups for which special instructions appear in the Product Group Reference List.**

10. Individuals, household users, and farmers – Include all direct sales from the manufacturing plants to households, farmers, and individual users (including sales to your company's own employees at retail, even if at a discount). Companies which deliver products to customers should include route sales to households in this item (sales to stores, institutions, and restaurants), State and local governments should be reported in the appropriate category.

11. Federal Government – Include all sales to branches of the Federal government and to corporations owned by the Federal Government; include sales to military post exchanges, ship's stores and similar units.

If you operate manufacturing plants reporting on Census Form MA-175, "Report on Shipments to or Receipts for Work Done for Federal Government Agencies and Their Contractors and Suppliers," report as sales to government only those shipments made directly to the government. Indirect sales under subcontractor should be reported as shipments in the class of customer to which the prime contractor is classified, usually **other manufacturing companies.**

12. Export – Report sales for direct export, including shipments to your company's foreign subsidiaries and affiliates. Do NOT include shipments to domestic exporters which should be reported as sales to wholesalers.

13. Other – Report sales for all customers not listed in lines 6-12 (and 19-25).

14. Total shipments from manufacturing establishments – The sum of lines 1-13 should approximate the sum of product class shipments comprising the group reported in item 9, Form MA-100, of establishment reports with allowance for resales.

16. Total for product group reported in item 9 of Form MA-100 should equal the sum of product class shipments comprising the product group reported in item 9, Form MA-100.

Section 2 – SALES BY SALES BRANCHES, SALES OFFICES, AND ADMINISTRATIVE OFFICES – Lines 17-26 – Class of customer definitions are the same as for section 1B.

GENERAL INSTRUCTIONS

As part of the 1967 Census of Manufactures, the Bureau of the Census is conducting this survey of the Distribution of Manufacturers' Sales by Class of Customer. This survey will provide a current analysis of the institutions through which the Nation's goods move from the manufacturer to the customer. The results are needed for the improvement of the national income and product statistics. The latest broad-scale survey of the distribution of sales covered 1958.

One Form (NC-K4S) should be completed by each company operating only one place of business during 1967. If you operate more than one separate place of business, please let us know and we will send you the correct form.

This report covering all of the domestic activities of the company will measure the flow of products from this company to its customers. Please report in column (B) the value of all of your products (whether made in your company or purchased and resold without further fabrication) shipped to each of the class of customer categories listed in column (A). Report shipments on consignment as though the merchandise had been sold at the time of the shipment. If such consignment shipments are to agents, consider the agent as a wholesaler.

Estimates are acceptable – We appreciate that there is no uniform system of sales analysis for all manufacturing companies and that reporting on this form will require some companies to resort to the use of estimates to a greater extent than is usually necessary for Census report forms. If you do not have records showing your sales by class of customer or if your sales analysis by customer class differs for some of the classes shown on this form, approximate figures will be acceptable. It is hoped that you can provide estimates that do not miss the actual figure by 2 or 3 percent of the total value of sales for the product group.

Form NC-K4S – should equal – **1967 Form MA-100**

Line 9 . . . . . Item 9a-9j and 9m (resales)
Line 10 . . . . . Item 9k

Line 12 . . . . . Item 9n

1. Wholesalers – Include all wholesale companies purchasing primarily for resale to other businesses or to institutions and not directly to household consumers or farmers. Include industrial distributors, drop shippers, desk jobbers, voluntary group wholesalers, retail cooperative warehouses and buying groups, as well as wholesale merchants, exporters and export intermediaries and similar types of operations.

2. Retailers – Include sales to businesses which sell merchandise for personal, household, or farm consumption. Include all chain stores, mail order houses, department stores, independent retailers including those who operate their own home service delivery routes such as independent bakery or dairy truck distributors.

3. Manufacturers – Report sales to companies known to be engaged in manufacturing. Include as manufacturers food processors such as bakeries; bottling plants; sheet metal operations; feed mixers; logging camps; sawmills; printing; publishing; apparel jobbers; producers of ready-mixed concrete; machine shops.

4. Commercial and industrial users, construction, State and local governments, private and public institutions – Include all private firms and businesses not considered manufacturers, retailers, or wholesalers. Thus, include in this item companies engaged in construction, mining, transportation; as well as utilities, restaurants, hotels, and other businesses providing services; include hospitals and schools, as well as **State and local governments.** (Report sales to the Federal Government separately.)

5. Individuals, household users and farmers – Include all direct sales from the manufacturing plants to households, farmers, and individual users, including sales to your company's own employees at retail, even if at a discount. Operating plants of the company which deliver products to customers should include route sales to households in this item (sales to stores, institutions, restaurants, State and local governments should be reported in the appropriate category).

6. Federal Government – Include all sales to branches of the Federal Government and to corporations owned by the Federal Government; include sales to military post exchanges, ship's stores and similar units.

If you report on Census Form MA-175, "Report on Shipments to or Receipts for Work Done for Federal Government Agencies and Their Contractors and Suppliers," report as sales to government only those shipments made directly as prime contractor. Indirect sales under subcontractor should be reported as shipments in the class of customer to which the prime contractor is classified, usually other manufacturing companies.

7. Export – Report sales for direct export, including shipments to your company's foreign subsidiaries and affiliates. Do **not** include shipments to domestic exporters which should be reported as sales to wholesalers.

Checks to assure a complete and accurate report

The Census Bureau reviews your report for omissions, inconsistencies, and unusual ratios. To save you future correspondence about these problems, please make the following checks before returning your report: (1) Review the report carefully to see that no items are omitted for the year being covered; (2) Calculate and enter figures for the four "reasonableness" checks below, and review the results; (3) Correct your report for any errors you find; explain unusual figures in "Remarks."

"Reasonableness" checks	Calculation required for each check	Figures for 1967
a. Average hourly wages per production worker	Item 3Aa (Production workers' wages) ÷ item 4e (Total man-hours)	$
b. Hours worked per year per production worker	Item 4e (Total man-hours) × 1000 ÷ item 2f (Average number of production workers)	Hrs.
c. Salaries and wages per dollar of shipments	Item 3Ac (Total payroll) ÷ item 18 (Total value of shipments)	¢
d. Materials cost per dollar of shipments	Item 5f (Total materials cost) ÷ item 18 (Total value of shipments)	¢

e. Is the total for value of shipments (item 18) greater than the sum for payroll (item 3Ac) plus total cost of materials, etc. (item 5f) ☐ Yes ☐ No — Explain in "Remarks."

GENERAL INSTRUCTIONS

A separate Census report is required for each manufacturing establishment; therefore, based on Census records, a report form is provided for each establishment which your company operated in 1967.

For purposes of the Census, a **manufacturing establishment** is defined as a single physical location where manufacturing operations are performed (e.g., a factory, mill, or plant). Thus a separate report is required for different physical locations even though the establishments may be engaged in the same line of manufacturing.

Please note that establishments engaged in the following activities are also considered to be manufacturing for the purposes of this Census: Poultry dressing; milk pasteurizing and bottling; seafood, fresh packaged or frozen; apparel jobbing and contracting; logging camps and logging; sawmills; printing; publishing—book, magazine, periodical, etc.; manufacturing and delivering ready-mixed concrete; machine shops, including those operating on a job order basis; job casting, stamping, machining; plating, galvanizing, polishing materials owned by others, etc.; ship and boat repairing.

In completing this report, a limited amount of prorating or estimating is acceptable if book records are not readily available. Include all the activities conducted **within** the establishment: e.g., manufacturing, fabricating, processing, and assembling; maintenance of plant and equipment; receiving, shipping, warehousing, storage; research; record keeping; health, safety, cafeteria, and other services.

Each report should cover the calendar year 1967. However, a report is required even if the establishment operated only part of the year. If your book records are not on a calendar year basis, carefully prepared estimates will be acceptable. If reporting on a calendar year basis will require considerable additional costs, and your fiscal year covers at least 10 months of the calendar year 1967 (i.e., ends between October 31, 1967 and February 29, 1968), you may report on a fiscal year basis. However, all employment, payroll, and man-hour figures should relate to the calendar year rather than the fiscal year. (Calendar year payroll records should be available from your tax records.)

In the certification, enter the exact dates of the period covered by the report. If the ownership changed during the year, complete the report only for that part of 1967 in which your company owned and operated the establishment. Report in item 13 the appropriate information on changes in ownership or operations.

If additional report forms are needed, write to the Jeffersonville Census Operations Office. Be sure to describe the type of activity of the establishments for which the additional report forms are requested.

CONTINUATION OF INSTRUCTIONS FOR ITEMS 2, 3, 4, 5, and 7

(Definitions of employees and payrolls used to calculate withholding taxes generally may be followed in completing items 2 and 3A, Employment and Payrolls.)

Item 2. Number of Employees—Be sure to include all persons on paid sick leave, paid holidays, and paid vacation during the pay periods, as well as those actually working. Exclude members of armed forces and pensioners carried on your active rolls. Include officers at this establishment if a corporation; if an unincorporated concern, exclude proprietors or partners.

Item 3A. Payrolls—Report the gross earnings paid in the calendar year 1967 to employees on the payroll at the establishment prior to such deductions as employee's Social Security contributions, withholding taxes, group insurance premiums, union dues, and savings bonds. Include in gross earnings, commissions, dismissal pay, paid bonuses, vacation and sick-leave pay, and the cash equivalent of compensation paid in kind. Include salaries of officers at this establishment if a corporation; if an unincorporated concern, exclude payments to proprietors or partners. Exclude payments to agricultural employees, fishermen, members of armed forces, and pensioners carried on your active payroll.

Item 4. Plant Man-hours of Production Workers—If an employee elects to work during vacation periods, report only actual hours worked.

Item 5. Cost of Materials, Fuels, Electricity, and Contract Work—If actual consumption records are not available, cost of purchases may be used if these do not differ significantly from the amounts actually used. The consumption of any major item which differs significantly from purchases should be estimated by adding beginning inventories to the amounts purchased and subtracting from this total the cost of goods on hand at the end of the year.

Item 5a. Cost of Materials, Parts, Components, Containers, Supplies, etc., Consumed—Report the delivered cost of all raw materials, containers, scrap, and supplies, etc., which were: (1) put into production; (2) used as operating supplies; (3) used in repair and maintenance. Include also cost of materials owned by this establishment but consumed by other companies to make products for this establishment under contract. (The value of these products should be reported in item 18.) Amounts paid to other companies for such contract work should be reported on line 5e and should include freight out and in. If semi-finished goods, parts, or components were produced and incorporated into finished products at this plant during 1967, include the cost of raw materials used rather than the value of the intermediate products.

Include **only** value of **physical goods used** or put into production. Exclude cost of such **services** as advertising, telephone, telegram and cable, insurance; developmental, research, or engineering; management, marketing, and other professional consultants, etc., unless charges for such services are included in the prices paid for materials. Exclude also such **overhead** items as depreciation charges against plant and equipment; rent and rental allowances, interest payments, royalties, and patent fees. Exclude materials, supplies, machinery, and equipment which were used in the construction of new structures or additions to your plant, or new machinery and equipment, and which were chargeable to fixed assets accounts. Exclude products purchased and resold without further manufacturing, processing or assembling; their costs should be included in item 5b.

Item 5b. Cost of Goods Sold Without Further Manufacturing, Processing, or Assembling in this Establishment—Include all products bought and resold in the same condition as when purchased and not made part of another product manufactured by this establishment. (Total sales value of all products resold is to be reported in item 18 on the line for "Resales.")

Item 5c. Fuels Consumed—Report cost of all fuels (including gasoline) consumed for heat, power, transportation, and the generation of electricity.

Item 5e. Cost of Contract Work Done for You by Others on Your Materials—Report the total payments made during 1967 for any work done by others on materials furnished by your establishment, including freight out and in on the materials furnished by you.

Item 7. Capital Expenditures for this Establishment (Exclude expenditures for land)—Capital expenditures during 1967 may be determined by the following computation: The cost of additions completed during the year, plus construction in progress at the end of the year, minus construction in progress at the beginning of the year.

Item 7a. New Structures and Additions to Plant—Report total expenditures during 1967 for new construction (whether constructed on contract or by your own forces), major alterations, capitalized repairs, and improvement of buildings, including all new elevators, cranes, heating and ventilating equipment, essentially a part of the buildings. Also, other fixed structures (such as brick kilns, shipways, and similar types of structures), and site improvements (such as roads, docks, tracks, parking lots, fences, utilities).

Item 7b. New Machinery and New Equipment—Report total expenditures at this establishment for new production machinery and equipment and other new machinery and equipment. Include replacements, as well as additions to capacity. Include the value of capitalized improvements and repairs to machinery and machinery produced and used at this establishment. Include all new motors, lathes, punch presses and similar machinery and equipment for use in production, as well as all new office machines and fixtures, furniture, cafeteria and dressing room furnishings, automobiles and trucks, and other similar equipment.

Item 7c. Used Plant and Used Equipment Acquired from Others—Report total expenditures at this establishment for old or existing plants and for second-hand equipment acquired from others, including the U.S. Government. Include at approximate market value machinery or equipment transferred from other plants of your company.

EXPENDITURES FOR PLANT AND EQUIPMENT DURING 1967 FOR MANUFACTURING ESTABLISHMENTS UNDER CONSTRUCTION

ANNUAL SURVEY OF MANUFACTURES (1967 CENSUS OF MANUFACTURES)

INSTRUCTIONS

The information reported on this form should be for manufacturing establishments under construction or renovation and **not in operation** during the calendar year 1967. Expenditures for any plant in operation (those which had employees, inventories, or made shipments) during the calendar year should be reported on the Annual Survey of Manufactures form(s) MA-100, and they should not be duplicated in this report. The sum of the figures shown in column (b) of item 2 of this report and in item 7 of form(s) MA-100 should account for all capital expenditures (exclusive of those for land) made by this company and its subsidiaries and affiliates during the calendar year 1967 for manufacturing facilities in the United States.

Report expenditures by this company, its subsidiaries, and affiliates during the year, for construction and equipping **new manufacturing establishments, or for renovating existing manufacturing establishments,** that were not actually in operation during the year.

Expenditures refer to all costs actually incurred **during the calendar year 1967,** which are chargeable to fixed assets accounts, and are of the type for which depreciation accounts are ordinarily maintained. These expenditures cover the acquisition, construction, and major alteration of buildings, and other fixed plants and structures (whether on contract or by your own forces) and the acquisition of machinery and equipment. **Expenditures are equal to construction and other additions to fixed assets completed during 1967, plus construction-in-progress at the end of 1967, minus construction-in-progress at the beginning of 1967.**

Do not include any expenditures on these projects actually made prior to or after the calendar year. For example, if construction of a new plant is begun before and is completed after 1967, only those costs chargeable to fixed assets accounts which were actually incurred during the calendar year should be reported. If your records do not show the exact information needed, please make careful estimates.

Column (a) – Principal products to be made or activities to be conducted at this establishment – Describe briefly the kind of business that will be conducted at the establishment. List the principal types of products that will be produced.

Column (b) – New plants and structures – Report total expenditures during the calendar year for new construction and major alterations of buildings, including all new elevators, cranes, heating and ventilation equipment, essentially a part of the buildings; other fixed structures (such as blast furnaces, brick kilns, fractionating towers, shipways, and similar types of structures); and site improvements (such as roads, docks, tracks, parking lots, fences, utilities, etc.). Exclude expenditures for land.

New machinery and equipment – Report total expenditures during the calendar year for machinery and equipment acquired in new condition for use in production, and other purposes in plants under construction or renovation. Examples are motors, lathes, punch presses, automobiles, trucks, office machinery and equipment, furniture, cafeteria facilities, etc.

Used plant and used equipment – Report total expenditures during the calendar year for acquisition of old or existing plant and second-hand equipment from others, including the U.S. Government, for use in establishments under construction.

If you have any questions regarding form MA-101, please communicate with the Jeffersonville Census Operations Office, Jeffersonville, Indiana 47130. Please complete this report and return by April 30, 1968, in the enclosed envelope, which requires no postage. Your cooperation will be greatly appreciated.

GENERAL INSTRUCTIONS

Please complete and return this form in the envelope provided.

A separate report is required on this form for each sales branch and sales office operated during 1967. Each sales office without stock should be reported separately as well as each sales branch carrying stocks of merchandise from which deliveries are made to customers. Sales branches and sales offices located at plants or administrative offices should be reported on this form where separate records are available, or if substantially accurate reports can be prepared. Employment, payroll, inventories, and operating expenses reported here should not be included in manufacturer's plant reports (MC series). Sales, however, will to some extent duplicate shipments on your plant reports.

This report should cover only the establishment identified in the address block.

This report should cover the calendar year 1967 or, if records are maintained on a fiscal year basis, the report should cover the fiscal year which includes at least 10 months of 1967.

If book figures are not available, enter your best estimates.

If unusual circumstances should cause an undue burden in filing by the due date, or if you have any questions, please write to the **Jeffersonville Census Operations Office, Jeffersonville, Indiana 47130.**

AUTHORITY FOR CENSUS: TITLE 13, UNITED STATES CODE

(Codification of August 1954 amended by Acts of August 1957, September 1960, June and October 1962, and August 1964)

Collection and publication: Five-year periods (131)

The Secretary shall take, compile, and publish censuses of manufactures, of mineral industries, and of other businesses...in the year 1964, then in the year 1968, and every fifth year thereafter, and each such census shall relate the year immediately preceding the taking thereof.

Geographic scope of censuses (191a)

Each of the censuses authorized by this chapter (other than censuses of population) shall include each State, the District of Columbia, Alaska, Hawaii, the Virgin Islands, Guam, and the Commonwealth of Puerto Rico, and as may be determined by the Secretary, such other possessions and areas over which the United States exercises jurisdiction, control, or sovereignty. Censuses of population shall include all geographic areas referred to in the preceding sentence. Inclusion of other areas over which the United States exercises jurisdiction or control shall be subject to the concurrence of the Secretary of State.

Failure to answer questions affecting companies, businesses, religious bodies, and other organizations: False answers (224)

Whoever, being the owner, official, agent, person in charge, or assistant to the person in charge, of any company, business, institution, establishment, religious body, or organization of any nature whatsoever, neglects or refuses, when requested by the Secretary or other authorized officer or employee of the Department of Commerce or bureau or agency thereof, whether such request be made by registered mail, by certified mail, by telegraph, by visiting representative, or by one or more of these methods, to answer completely and correctly to the best of his knowledge all questions relating to his company, business, institution, establishment, religious body, or other organization, or to records or statistics in his official custody, contained on any census or other schedule prepared and submitted to him under the authority of this title, shall be fined not more than $500 or imprisoned not more than sixty days, or both; and if he willfully gives a false answer to any such question, he shall be fined not more than $10,000 or imprisoned not more than one year, or both.

Appendix G

COMPARABILITY OF PRODUCT CLASSES BETWEEN THE 1967 AND 1963 CENSUSES OF MANUFACTURES

This appendix lists classes of products which underwent revision between the 1963 and 1967 censuses of manufactures. Revisions resulted from some amendment in the 4-digit industry composition of the Standard Industrial Classification (SIC) Manual between the two years and from changes in product classes in 1965, and again in 1967, within industries not otherwise affected by SIC 4-digit amendment. The 1967 revision of the 4-digit SIC level affected but a few industries, mainly a reordering, including deletion, of some 4-digit industries within several 3-digit SIC groups and, in the case of group 398, its deletion and merger with group 399. Most of the 1963-1967 changes in classes resulted from revision within industries not affected by 4-digit revision. These 5-digit changes were occasioned by the need to (1) accord recognition to products growing in importance and discontinue product groupings declining in importance; (2) reflect changing technologies or market orientations; and (3) correct errors in classification.

Product classes, coded to the 5-digit level, represent families (of substantial shipments size) of relatively homogeneous products, the latter coded to the 7-digit level. As such, the product class is an intermediate level of coding between the 7-digit product and the 4-digit SIC industry. Product classes are utilized by the Bureau of the Census for data collection in both the Census of Manufactures and Annual Survey of Manufactures and in more than 100 current commodity reports in the Current Industrial Reports series. While the Annual Survey of Manufactures is built around the product class, in the Census of Manufactures (Volume II, Industry Statistics) product class data will be found in a number of tables, important among these is table 5B which shows the shipments of product classes by industries and secondary industry contributors to the shipments of those product classes; tables 6A, B, and C give production and/or shipments data for such classes; and table 8, where general statistics (number of establishments, employment, payrolls, value added, and value of shipments, among other items) are shown for establishments specializing in a product class. Production and/or shipments data, by product class, will also be found in many of the Current Industrial Reports.

In the following table, the comparability (convertibility) between the product classes for 1967 and 1963 is shown only for those 1963 classes which were revised in some way between the two years. As noted, a few revisions were made in 1965 with no revision in the 4-digit industry level. Some of these 1965 changes were continued into 1967. However, a few of the 1965 changes were subjected to further revision in 1967; such changes are not shown in the table.

The table should be interpreted as follows:

1. Where a single code in 1967 is shown as equivalent to a single code in 1963 (for example, 1967 code 35196 equivalent to 1963 code 35193), the revision involved a simple recoding of the product class with no change in product coverage. This situation resulted from a reordering of product classes within an industry or was necessitated by a revision in the Standard Industrial Classification (SIC) between 1963 and 1967.

2. Where one class is shown for 1967 and two or more classes are shown for 1963, the one class is equal to the two or more classes in product coverage; for example, 1967 code 22710 is equivalent to the two 1963 codes 22711 and 22712. The reverse is also true; for example, 1967 codes 22823 and 22824 are equivalent to 1963 code 22821. In these situations, the 1967 code 22710 resulted from a combination of the 1963 codes 22711 and 22712, and the 1967 codes 22823 and 22824 resulted from a splitting of 1963 code 22821.

3. Where several classes in 1967 are shown as equivalent to several classes in 1963, all classes in 1967 taken together are equivalent to all classes in 1963 taken together.

Appendix H

ALPHABETIC INDEX OF MANUFACTURED PRODUCTS

This index is intended to assist in locating statistics on manufactured products in table 6A, "Products and Product Classes—Quantity and Value of Shipments by All Producers: 1967 and 1963," in the industry chapters. Table 6A presents data not only for some 5,500 products reported in the 1967 census but for 5,000 additional products covered in the Current Industrial Reports series of commodity surveys, for which only summary totals were called for in the census of manufactures.

The product information in table 6A of any industry chapter is for products primary to the industries covered in that chapter; such products are coded, in the first four of their seven digits, to the industry code of their primary industry. Thus, pistols and revolvers, product code 1951232, are primary to industry 1951, Small Arms. The product statistics for the 7-digit code will be found in table 6A in chapter 19A, which includes industry 1951.

In this index the products, alphabetized and coded to their first five digits, are typically described in broad terms; more detail by size, material composition, end-use, etc., will be found in table 6A. To assist in locating product statistics, the index includes cross references or alternate ways of describing products.

Statistics on products are contained in tables other than 6A but no references to such other tables are given here. For example, summary product information at the industry (4-digit) level may be found in tables 5A and at the product class (5-digit) level in table 5B. Product class specialization general statistics may be found in table 8. In a few chapters, detailed product information is contained in tables in the table 6 series, in addition to table 6A.

This volume contains 80 chapters. Each chapter presents statistics, including product statistics, for several 4-digit industries. For each chapter, the paging commences with the 2-digit SIC major group number followed by a letter. Within that chapter, the individual pages are numbered sequentially. (For instance, the chapter on dairy products, covering industries 2021 to 2026, is numbered 20B.) Table AA, Product Finding Guide, gives a listing of each of the 80 chapters together with the industry codes included.

To use the alphabetic index in this appendix--

1. Find the product in the index.
2. Note the first four digits of its 5-digit code,
3. Locate the 4-digit code in table AA, and
4. Turn to table 6A in the chapter indicated.

For example, the product, "butter, creamery", will be found in the alphabetic index coded 20210. Referring to table AA, it will be noted that industry code 2021 is included in chapter 20B. In chapter 20B, table 6A will be found commencing on page 20B-14, with statistics for butter.
